EMC's Policies and Requirements for EMC Support Matrix

EMC's Support Matrix Policies and Requirements

This section describes EMC's policies and requirements for the EMC Support Matrix document.

Purpose and Limitations of this Document

This document is being provided for informational purposes only and may change at any time. This version supercedes and replaces all previous versions. The information is to serve only as a guide for those configurations/products which EMC has qualified. This document identifies and lists various vendor host systems and integral components that have been tested and qualified by EMC for use with EMC products. Vendor components include, but are not limited to, host operating systems, HBAs (host bus adapters) and associated drivers, firmware and BIOS; Fibre Channel switches, hubs and bridges. This document also lists various vendors, cluster software, tape hardware, storage system boot procedures, heterogeneous information storage, and configurations that EMC has tested and/or qualified for use with EMC products.

The information included in this document is intended as a guide in the configuration of systems for EMC's products. It is not intended to be the sole resource for system configuration. For more information or answers to questions not found in this document, please see EMC's website, other EMC documentation, such as EMC's Host Connectivity Guides, EMC Networked Storage Topology Guide, EMC CLARiiON Open Systems Configuration Guide, relevant vendor documentation, or contact your EMC Sales or EMC Customer Service representative. For Symmetrix 4.x support, please look at the Symmetrix 8000 Series section and check the footnotes for model/microcode compatibility. EMC employees can obtain additional Symmetrix 4.x information from the C4 support group.

Policies for Qualifying Systems

Policies and procedures for support of EMC products are set forth in the customer's applicable agreements. EMC's publication of information relating to system configurations covers only those outlined in this document or by approval from EMC Engineering. Other system configurations not found in this document are not qualified without EMC Engineering approval. EMC has qualified hardware and software provided only by the vendors listed in this document, and host systems, hardware and software from other vendors are not qualified, and may never be. Please contact your EMC Sales or EMC Customer Service representative for updates or information not included in this document.

EMC maintains a large collection of the products listed above as well as third-party application software for qualification with EMC's storage systems and to simulate customer environments, but you must consult the vendors for information about their system internals, such as hardware and associated drivers.

Policy for Future Qualification of Operating System Software Releases

The information in this document is maintained by EMC and EMC strives to update this document with new releases of hardware, operating systems, firmware, BIOS, switch software, etc., as they become available from the vendors. EMC works with the vendors during their development and release processes in order to be fully informed at the time the vendors release new versions. EMC does not announce qualification prior to vendors' General Availability. In some cases, EMC may choose to perform regression testing following the vendors' GA; in these cases and in cases where advance preparation is not possible, EMC may test and qualify vendors' products as appropriate after they have been released. For early support of such products, including vendor beta participation, contact your EMC Sales or EMC Customer Service representative.

Policy for End-of-Life Support

EMC strives to continue support for any installed platforms, but may remove support from this host matrix for new installations within three months after the vendor has announced that this platform has reached the end of life. EMC will continue support for existing installations of hardware, operating systems, and components that the vendor has officially declared to have reached end of life as long as support is available from the vendor.

End-of-Support Products

Symmetrix 5000 and 3000 Series

For Symmetrix 4.x support, please look at the Symmetrix 8000 Series section and check the footnotes for model/microcode compatibility. EMC Employees can obtain additional Symmetrix 4.x information from the C4 support group.

Symmetrix 8000 Series

Base Connectivity

EMC has qualified the following hosts. No other hosts are supported at this time. Symmetrix models and minimum Engenuity revisions are listed in the footnotes on most tables. EMC supports Symmetrix configured as a boot device for the servers listed below, provided that these requirements are followed. The purpose of these requirements is primarily to ensure the best possible response times for boot/root/swap volumes. For qualified configurations, Where possible, EMC recommends an alternate mirrored boot volume be configured.1. Spindles can be shared on Symm4 or later units only.2. Spindles can be shared if they are larger than 9GB in size.3. For Symmetrix 3000 and 5000 systems, the maximum number of Symmetrix logical volumes per Symmetrix boot port is 32. For Symmetrix 8000 and DMX systems, the following guidelines and recommendations must be adhered to. When using a SAN for boot/swap/page device the operation and performance of the server might be affected by external events that might cause the storage device not to be immediately accessible for periods of time. These events might result in slow response times as observed by the operating system and longer boot times. In some cases it can cause the server to crash (please see comments below for W2K/NT).

EMC recommends designing the distribution and mapping of the boot devices on the SAN in a way that will:

- Minimize the number of components between the server and the boot storage device.
- Will not present a load that will exceed the limits of the SAN. Below are some issues that must be considered when designing your SAN. Please refer to EMC Networked Storage Topology Guide ("Networked Storage Design Considerations/Fabric Design Practices" section) for a complete discussion on the topic.
- Sufficient bandwidth on the link between the switch and the storage port
- Sufficient ISLs in case where boot device and server are more than one hop apart
- ISL utilization

Events that could affect the availability of an external storage device:

Fibre Channel and SCSI environments:

- Lost connection to external storage (pulled or damaged external Fibre/SCSI cable connection).
- External storage service/upgrade procedures such as in some cases, online microcode upgrades and/or configuration changes.
- External storage director failures including failed lasers on Fibre Channel directors.
- External storage power failure.
- HBA failures.

Fibre Channel environment only:

- Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements.4. Boot/root and swap from a single host can be on the same channel.5. The boot disk should be high SCSI priority, e.g. SCSI TID 6 (0-7, 8-15: higher priority TID is 7, lowest is 8).6. A dedicated SA or FA is not required for boot devices.7. The Internal Host Boot Device may be mirrored with the External Symmetrix Boot Device to allow redundant pathing. Does not apply to Microsoft Windows.8. The Boot path must not include a hub in the topology.9. The maximum number of boot devices per port is equal to Fanout values listed in Fibre Channel Connectivity table. Note: All of the requirements below are necessary for Symmetrix 3/5000 Series. It is recommended, however, that they be considered for Symmetrix 8000 Series also.1. The Boot Device may not be a striped Meta Device on a Symmetrix 4.x.2. One spindle cannot house both boot/root and swap for any single host (does not apply to Microsoft Windows).3. One spindle cannot house boot/root for a given host and either boot/root or swap from another host.4. One spindle should not house swap from more than one host, nor should there be excessive swapping.5. The maximum number of hypers per Symmetrix spindle is 8.6. A spindle housing boot/root for a given host should be behind a different Director than the spindle housing swap for that host.7. Remaining hyper volumes on boot/root or swap spindle should be low-utilization and not high write content.

Amdahl UTS

Amdahl

Amdahl - Amdahl UTS						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
1	Millennium: GS2000A, GS2000C, GS2000E, GS700	Mainframe Bus	Amdahl UTS: 2.1.5, 2.1.7, 4.3.2, 4.3.3, 4.4.0	IBM BMC-Parallel ¹	BMC-Parallel	N
2	Millennium: GS2000A, GS2000C, GS2000E, GS700	Mainframe Bus	Amdahl UTS: 2.1.5, 2.1.7, 4.3.2, 4.3.3, 4.4.0	IBM ESCON	ESCON	N

1. Parallel channel attachment is only available on the Symmetrix 5000 series.

- Supported by Unisys only.
- Symm5 & 66/67 support via RPQ(5x67)(UnixWare).
- Supported by Unisys RPQ only.
- Not supported on a Symmetrix 8000 Series, no plans for support.
- EMC does not support this HBA; supported by Unisys ONLY.
- Also ClearPath VX14xx Styles.
- Also ClearPath VX13xx Styles.
- Use with Copper Hub.
- For ES7000–xxx, Plateau below 8.1.1 use BIOS 1.63. For ES7000–xxx, Plateau 8.1.1 must use BIOS 1.71.
- Driver Version 3.13c.

- For more information see <http://athena.europe.dg.com>
- Symmetrix 8000 Series: 66/67 support at DG/UX 4.11, 5568 support at DG/UX 4.20.
- The release notice for DG/UX (included with the software release at path: "/usr/release/dgux*.m) lists supported platforms.
- DG/UX automatically loads the firmware and BIOS onto the Emulex HBA during boot-up as needed.
- Only the Brocade FC switch connection is supported. Connectrix FC switch is not supported.
- Supported with Magic OS.
- The driver is available at <http://www.adaptec.com/worldwide/support/suppbyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
- Requires Legacy PCI slot (not available on most new servers.)**
- FC–AL support requires LP8000 BIOS version DB1.60A7 and firmware version DS3.20x4.
- The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.

- For use in Asia Pacific/Japan only. Refer to Fujitsu Siemens Base Connectivity information for US/Europe.
- EMC required Solaris patches for Fujitsu PCI Bus servers running Solaris 2.6 (must be obtained from Fujitsu): 105181-33: SunOS 5.6:kernel update patch. 105356-19: SunOS 5.6: /kernel/drv/ssd and /kernel/drv/sd patch. 105580-19: SunOS 5.6: /kernel/drv/glm patch.
- Requires N-bit for PCI SCSI interface to support PowerPath.
- Disconnecting and reconnecting the SCSI cable on an active system will reduce I/O transfer rate due to negotiation issues. Host is not capable of WDTR after link recovery.
- Additional Fujitsu Safe Series software qualified in the single host environment, and associated patch requirement (must be obtained from Fujitsu): Fujitsu SafeFile 1.1: 910232-18 Fujitsu SafeFile 1.2: 910738-05 Fujitsu SafeFile 1.3: 910879-04 Fujitsu SafeFile/Global 1.2 910937-06 Fujitsu SafeDisk 1.1: 910315-08, 910432-01. Fujitsu SafeDisk 1.2.1: 910721-06. Fujitsu SafeDisk/Global 2.0: 910920-05. Fujitsu SafeDisk 2.0: 910926-05. Fujitsu SafeLink 2.0: 910743-07, 910766-03.
- Fujitsu requires all patches for Solaris 7 be obtained through Fujitsu in the form of a Solaris 7 PTF patch CD. The current patch CD is Solaris 7 PTF R03111.
- EMC DP3-FC08 may not be used with Fujitsu GP7B8FC1 FC-AL.
- Fujitsu GP7B8FC1 HBA requires Fujitsu patch 910936-11.
- Driver Version v2.2.
- Fujitsu requires all patches for Solaris 8 be obtained through Fujitsu in the form of a Solaris 8 PTF patch CD. The current patch CD is Solaris 8 PTF R03111.
- Same machine as Sun Ultra 10 Model 300, and Fujitsu Ltd. GP400S Model 10.
- Fabric topology(FC-SW) supported with Solaris 7 and 8 only.
- Requires Fujitsu PFA 2.2.1 and patch 912069-10.
- Fujitsu requires that all patches for Solaris 9 be obtained through Fujitsu in the form of a Solaris 9 PTF patch CD. The current patch CD is Solaris 9 PTF R03111.
- FCode value 1.40a0.
- Firmware Version 1.80a2.
- Driver Version 5.02b.
- Firmware Version 1.01a2.

- 128 LUNs supported only with Reliant UNIX V5.44C1014 and higher.
- Symmetrix 8000 Series: 66/67 support: Reliant UNIX 5.44,5.45 Solaris 2.6, 7, 8 or 9. Symmetrix 8000 Series:5568 support: Solaris 8,9.
- PowerPath is not supported on any RM400C or RM400E model. DRAID is supported on Reliant UNIX 5.43C20 and above.
- V5.45A30 OS and higher supports upto 4096 LUNs. FC switch support starts with Reliant UNIX V5.45A20 and higher.
- Adapter can either be Emulex LP6502 (FW 2.12) or LP8000 (FW 3.82a1). LP6502 not supported with Symmetrix DP3-FCD4, DP3-FCD42G(S) (900-563-xxx) adapter.
- PowerPath support requires version 1.5.0 with patch 1.5.0.1.Patch.b07. PowerPath is supported only on RM600E platforms.
- Minimum Symmetrix microcode level 5264.19.17 No DRAID support until Reliant UNIX 5.43C20. V5.45A30 OS supports up to 4096 LUNs. SYMCLI/API v4.1 does not support DRAID on Reliant UNIX 5.44C OS.
- Fast-Wide SCSI is a default setting.Ultra-Wide can be enabled through software. Refer to the latest Symmetrix Open Systems Environment Product Guide, P/N 200-999-563. PowerPath support requires version 1.5.0 with patch 1.5.0.1.patch.b.07. Powerpath is supported only on RM600E platforms.
- SHC-OSD (Symmetrix Host Component for BS2000/OSD) is the only external software for TimeFinder/SRDF features. Further restrictions apply. Contact C4 Group or reference http://www.fujitsu-siemens.com/rl/products/bs2000/symmetrix_bs2000.html.
- DS2000 contains one Open Systems host SR2000 and one mainframe host BS2000.
- Fast-Wide SCSI is a default setting. Ultra-Wide can be enabled through software. Refer to the latest Symmetrix Open Systems Environment Product Guide, P/N 200-999-563.
- FC switch support starts with Reliant UNIX V5.45A20 and higher.
- PowerPath support requires version 1.5.0 with patch 1.5.0.1.Patch.b07. PowerPath is supported only on RM600E platforms.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Minimum Symmetrix microcode level 5062.61.40 with fba_impl_flag set to A004. No DRAID support.

- For use in US/Europe only. Refer to Fujitsu Base Connectivity information for Asia Pacific/Japan.
- Also supports Fujitsu Technology Solutions Inc.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Firmware Version 3.91a3.
- FSC requires all patches for Solaris 2.6 be obtained through FSC in the form of a Solaris 2.6 PTF patch CD. The current patch CD is Solaris 2.6 PTF R03111.**
- Symmetrix 8000 Series: 66/67 support: Reliant UNIX 5.44,5.45 Solaris 2.6, 7, 8 or 9. Symmetrix 8000 Series:5668 support: Solaris 8,9.
- Driver Version 5.02b.
- FSC requires all patches for Solaris 7 be obtained through FSC in the form of a Solaris 7 PTF patch CD. The current patch CD is Solaris 7 PTF R03111.**
- Requires Emulex Open Boot Version 1.40a0.
- PowerPath support for this controller is only with Solaris 2.6.
- No dynamic partition support. Disconnecting and reconnecting SCSI cables on an active system may induce the system to crash.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- SHC-OSD (Symmetrix Host Component for BS2000/OSD) is the only external software for TimeFinder/SRDF features. Further restrictions apply. Contact C4 Group or reference http://www.fujitsu-siemens.com/rl/products/bs2000/symmetrix_bs2000.html.
- FSC requires that all patches for Solaris 9 be obtained through FSC in the form of a Solaris 9 PTF patch CD. The current patch CD is Solaris 9 PTF R03111.**
- Refer to Fujitsu Base Connectivity information for Asia Pacific/Japan.
- Firmware Version 1.01a2.
- Driver Version 5.02c.

- Symmetrix 8000 Series & 66/67 support: HP–UX 11.0, 11.0 ACE, 11.i. MPE/iX 6.0, 6.5, 6.5.02, 7.0, 7.0.01
 - For HP–UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange –r N /dev/vg01/lvol1 or lvcreate –r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror–UX, then this flag should not be set.
 - These qualified HBAs for EMC Symmetrix storage in the HP9000 server model and the HP–UX revision installed may co–exist in that same server or the same hard partition. Other supported HBAs not used to attach to the Symmetrix may also co–exist on the same server unless specified by EMC and/or HP.
 - Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
 - For releases prior to 11.0, boot device maximum capacity is 4 GB
 - D, R Class only. Releases before 11.0, boot device max. capacity is 4 GB. Boot from Fibre Channel supported in non–HA configurations on D and K class servers running HP–UX 11.0.
 - The cables are the same as the Cxx mini 68S (VHDCI 8mm to SCSI3). Cables require termination at host end for N–Class, L–Class, A–Class and Superdome. Can be terminated either on cable, or on HBA, but not both.
 - Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3–U2SD4L).
 - A4800A and A5159A HBAs are both capable of Ultra 1 speeds, but ship from HP with a default setting of FWD. Symmetrix is supported at Ultra 1 speeds with both these HBAs. Ultra 1 can be enabled in the V–Class, N–Class, and L–Class, A–Class and Superdome PDC firmware. V–Class supports the A4800A Only.
- HP e3000 MPE SYSTEMS – The above note applies but only includes the A–Class and N–Class Servers. The HP e3000 A–Class does not support the dual port HBA A5159A.
- Minimum OS revision is HP–UX 11.0 Rev 9812.
 - Minimum OS revision is HP–UX 11.0 990P.
 - A4800A and A5159A HBAs are both capable of Ultra 1 speeds, but ship from HP with default setting of FWD. Symmetrix is supported at Ultra 1 speeds with both HBAs. Ultra 1 can be enabled in the N–Class PDC firmware.
 - rp5405, rp5430, rp5470, rp7400: (PA–8700 processors): Initial support with HP–UX 11.0 Sept 2001, 11i Sept 2001. Symmetrix microcode supported: 5266.40.28 or higher. 5566.41.28 or higher. 5267.27.19 or higher. 5567.34.19 or higher.
 - PA–8700 processors: Initial support with HP–UX 11.0 Sept 2001, HP–UX 11i Sept 2001.
 - VPARS supported in boot environment with HBA supported defined in Base Connectivity table.
 - Requires minimum PDC firmware 39.46 (39.26 acceptable) or higher.
 - PDC firmware: Arbitrated loop and fabric, use 40.32 or higher.
 - Requires minimum microcode release 5265.39.24.
 - Requires minimum PDC firmware 32.2 and PDHC 7.3 or higher
 - Qualified and supported by HP.
 - Requires PDC firmware TSSW5.3.
 - HP–UX 11.0 switched fabric support is enabled with: fabric device driver version B.11.00.03 and higher; minimum operating system level HP/UX 11.0 990P with March 2000 HW–CR bundle and dependency patch PHKL_21381 patches may be superceded or have co–dependencies as defined by HP. Symmetrix microcode versions: 5265.49.31, 5266.20, 5566.22 or latest Symmetrix microcode versions.
 - HP A5158A FC–SW is enabled in the March 2000 HWCRCR bundle XSWHWCR1100.48. Additional patches may be required for support.
 - PDC firmware: V2200, 2250: Arbitrated loop and fabric, use TSSW 5.3 or higher. V2500, 2600: Arbitrated loop, use TSSW 3.1 or higher. Fabric, use TSSW 3.2 or higher.
 - The Brocade (Brocade, EMC, or HP models) switch port the HBA involved in a FC–SW topology boot process or FC–SW topology dump process is attached to, is required to be locked as G port when the boot or dump volume resides on the Symmetrix. This can be accomplished by executing the "portCfgGport port_number,1" command from a telnet session on the Brocade switch. The boot device can not be located more than two hops from the initiator involved in the boot process.
 - For direct attached FC–AL boot or dump from a Symmetrix FA port configured for 2 Gbit speed, the Symmetrix auto–negotiation director flag must also be enabled on the FA port. FC–SW 2–Gbit boot and/or dump using A6795A requires Auto–Negotiation flag to be enabled on the switch port the HBA is attached to.
 - Driver Version 11.00.10.
 - HP A5158A FC–SW software requirement: FC–AL and FC–SW requires the HP A5158A Tachlite PCI Fibre Channel Adapter. The A5158A FC–SW software fabric driver version "AP0301", for HP–UX 11i is now available for download from HP's software depot site, <http://www.software.hp.com> under "drivers". It is referred to as the "hp pci tachyon tl fibre channel

- adapter", and requires the installation of dependent patch PHKL_22874 prior to installing the fabric driver, patches may be superceded or have co-dependencies as defined by HP.
29. FC-AL and FC-SW topologies can co-exist on the same server but not on the same HBA, provided that the different topologies are attached to different HBAs
30. Minimum driver version for SNIA HBA API support with HP-UX 11.0 is B.11.00.10. Minimum driver version for SNIA HBA API support with HP-UX 11.11 is B.11.11.09.
31. Driver Version 11.11.09.
32. Boot from Fibre Channel is supported in non-HA configurations on N class servers running HP-UX 11.0 with direct attachment.
33. N-Class: Arbitrated loop boot with PDC rev 40.04 or higher. Fabric boot with PDC rev 40.25 or higher.
34. Requires PDC firmware N-Class 40.25, rp7400 (PA-8700) requires PDC firmware 41.36.
35. Fibre boot from N-Class and L-Class in both non-HA and HA configurations is now supported in multi-initiator configurations.
36. Initial support for fabric is enabled with: fabric device driver version B.11.00.03; minimum operating system level HP/UX 11.0 990P with March 2000 HW-CR bundle and dependency patch PHKL_21381; Symmetrix microcode versions 5265.49.31, 5266.20, 5566.22. Please refer to the Base Connectivity section for the latest driver and OS support.
37. Brocade 12000 and EMC ED-12000B Minimum firmware revision 4.0.2a to support boot.
38. Requires PDC firmware N-Class 40.25, L-Class 40.26.
39. PDC firmware: Arbitrated Loop (direct attach): use 40.19 or higher; Fabric: use 40.26 or higher
40. rp5430/5470 requires minimum PDC firmware 41.36 or higher.
41. HP-UX 11.00 minimum driver revision B.11.00.06.
HP-UX 11i minimum driver revision B.11.11.06.
42. Virtual Partitions (VPAR) is supported on the L-class/rp5470 server.
VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 41.02 or later.
43. Minimum driver revision for HP-UX 11i v1.0 (HP-UX 11.11) is PCI/HSC Fibre Channel Driver B.11.11.09. In a (Vpar) environment.
44. PA-8700 processors: Supports both 11.00 and HP-UX 11i processor 8700+ only supports HP-UX 11i.
45. Requires PDC firmware 40.32 or higher.
46. Only PowerPath 3.0.1 is supported for DMX series systems
47. FC-AL supported for direct attach only. No support for hubs or Quckloop at this time
48. Requires minimum PDC firmware 35.4 and PDHC 7.3 or higher
49. Initial Symmetrix microcode support: 5x67 minimum of 5567.38 or 5267.31 .
Initial Symmetrix microcode support: 5568 minimum of 5568.34.14
50. Virtual Partitions (VPAR) is supported on the SuperDome server with 4.x and 5.x Symmetrix models and DMX series. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.02.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 36.1 or later.
51. Dx90, Rx90 servers support a maximum of 2 A6684A HBAs. The first must be installed in the turbo slot 10/12 and the second in any HSC slot.
52. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC Symmetrix devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set. No additional patches are required for this option in HP-UX 11.0, HP-UX 11.11 and forward, however in HP-UX 10.x the "N" flag option was introduced with the following patches are required to be installed or patches which supercede or replace these in order to configured the logical volumes residing on Symmetrix devices in this manner: For all HP/UX 10.xx versions install the following Bad Block Reallocation Patch Pair: 10.01: PHKL_11294, PHKL_11890, PHCO_11288 (patches may be superseded or have co-dependencies as defined by HP). 10.10: PHKL_11816, PHCO_11817 (patches may be superseded or have co-dependencies as defined by HP). 10.20: PHKL_11086, PHKL_11903, PHCO_10964 (patches may be superseded or have co-dependencies as defined by HP).
53. Required dependent FCMS patches are required (patches may be superceded or have co-dependencies as defined by HP): HP-UX 11.0, PHKL_21834 HP-UX 11i: PHKL_23626. NOTE: These patches must be installed before installing the driver, available at <http://us-support2.external.hp.com>, HSC Tachlite driver available at <http://www.software.hp.com>, under "drivers" and locate Fibre Channel HSC Tachlite adapter (A6684A or A6685A). For HP-UX 11i, the driver is under "hp tachyon tl fibre channel adapter" which enables support for A6684A/A6685A/A5158A.
54. Dx90, Rx90 require minimum PDC firmware 41.35 or higher.
55. HP-UX 11.0 minimum driver revision B.11.00.06. HP-UX 11i minimum driver revision B.11.11.06.
56. Symm 6 is qualified with: HP-UX 11.00 Support Plus Sept '02 bundle = QPK1100 Sept '02 & HWE1100 Sept '02
57. Requires minimum PDC firmware 41.34 or higher
58. The A6685A is not supported in slots 10/0 and 10/8 of the K570 and K580. In the K570 and K580, there are restrictions for the number of A6685A HBA cards supported when graphics cards are installed.
59. A device may not be shared on both NIO(HP-PB) and HSC buses from the same server(e.g., A2969A with 28696A on K-class, or A3644A with 28696A on T600).
60. Requires minimum PDC firmware 35.4 and PDHC 7.8 or higher
61. Auto-sensing capability on the HBA is permanently enabled. There is no option to disable auto-sensing on the HBA.
62. Minimum driver revision for HP-UX 11i v1.0 (HP-UX 11.11) is PCI/HSC Fibre Channel Driver B.11.11.09.
63. The A6795A HBA is capable of supporting both 1 and 2 Gb speeds.
64. As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.
- L1000 (product number A5576A)
L2000 (product number A5191A)
N4000 Revision A (product number A3639A)
N4000 Revision B (product number A3639B)
65. L-Class requires minimum PDC firmware 40.26 or higher.
66. PDC firmware 42.06 or higher; Arbitrated Loop (direct attach) or FC-SW
67. rp5430/5470 required minimum PDC firmware 41.46 or higher.
68. The A6795A HBA is capable of supporting both 1 and 2 Gb speeds. QuickLoop is not supported with Brocade 3200/3800/12000 or EMC DS-16B2, ED-12000B.
69. PDC firmware 41.39 or higher; Arbitrated Loop (direct attach) or FC-SW
70. Requires minimum PDC firmware for N-class 40.25 or higher. The rp7400 (PA-8700) requires minimum PDC firmware 41.36 or higher.
71. PDC firmware 41.46 or higher; Arbitrated Loop (direct attach) or FC-SW
72. A500/550 requires minimum PDC 40.32 or higher.
73. PDC firmware 42.09 or higher; Arbitrated Loop (direct attach) or FC-SW
74. Symmetrix microcode version:
5266.33.23 or higher,
5566.35.23 or higher,
5267.22.15 or higher,
5567.29.15 or higher.
75. rp7400 requires minimum PDC firmware 41.36 or higher.
76. Virtual Partitions (VPAR) is supported on the N-class/rp7400 server with 4.x and 5.x Symmetrix models and DMX series. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later.
77. Requires HP-UX 11.0 General Release patch bundle XSWGR1100 B.11.00.47.05 released November 1999 or equivalent.
78. FC-AL, FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
79. Virtual Partitions (VPAR) is supported on the N-class/rp7400 server.
VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later. Powerpath support on Virtual Partitions has to be RPQed at this time.
80. A4800A and A5159A HBAs are both capable of Ultra 1 speeds, but ship from HP with a default setting of FWD. Symmetrix is supported at Ultra 1 speeds with both these HBAs. Ultra 1 can be enabled in the V-Class, N-Class, and L-Class, A-Class and Superdome PDC firmware. V-Class supports the A4800A Only.
81. Symmetrix microcode supported: 5266.40.28 or higher, 5566.41.28 or higher, 5267.27.19 or higher, 5567.34.19 or higher.
82. rp8400 requires minimum PDC firmware 13.10 or higher.
83. Requires minimum PDC firmware for N-class 40.25 or higher. The rp7400 (PA-8700) requires minimum PDC firmware 41.46 or higher.
84. HP-UX driver requirements: HP-UX 11.0 : A6795A HP PCI Tachyon TL/XL2 Fibre Channel driver B.11.00.10 or later release which supports this HBA. HP-UX 11i : A6684A/A6685A/A5158A/A6795A HP Tachyon TL/XL2 Fibre Channel driver B.11.11.09 or later release which supports this HBA.
85. Virtual Partitions (VPAR) is supported on the rp8400 server with the Clarion CX600 and FC4700.
FC-AL only support, Requires PDC 16.009 or later. Fabric boot with PDC 16.12 or later
- VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later.
86. Virtual Partitions (VPAR) is supported on the rp8400 server with the Clarion CX600 and FC4700.
FC-AL only support, Requires PDC 16.009 or later. Fabric boot with PDC 16.12 or later
- VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later
87. Virtual Partitions (VPAR) is supported on the rp7405/7410 server with 4.x and 5.x Symmetrix models and DMX Series. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.02.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 4.0 or later.
88. Requires Minimum Symmetrix microcode 5568.57.22
89. Required Patch PHKL_28569, PHKL_26938 and 2port 2Gig driver version 11.11.01.
90. Driver Version 11.11.01.
91. Firmware Version 3.02.162.
92. Host must be configured as a 64Bit operating system.

93. Symmetrix microcode supported:5566.41.28 or higher, 5567.34.19 or higher.
 94. Requires minimum PDC firmware 42.03 or higher.
 95. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
 96. HP-UX required patches: HP-UX 11.0 ACE: PHKL_23939, HP-UX 11i : PHKL_23626
 97. The driver is available at <http://www.adaptec.com/worldwide/support/suppbyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
 98. Requires minimum PDC firmware 15.005
 99. rp7410 requires minimum PDC firmware 16.009 or higher.
 100. **FCAL on Symm 6 supported by direct attach only**
 101. **Symm6: 512 lun limit per FA port**
 102. PDC firmware 15.05 or higher; Arbitrated Loop (direct attach) or FC-SW
 103. **Virtual Partitions (VPAR) is supported on the rp8400 server with 4.x and 5.x Symmetrix models and DMX Series. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, system firmware 4.0 or later, PDC firmware 16.009 or later.**
 104. Driver Version 11.23.01.
 105. The A6795A EFI driver must be upgraded to version 1.09 to support boot.
 106. HP-UX 11i v2.0 (HP-UX 11.23) is a IA-64 release and only runs on the HP Integrity rx family server.
 107. Firmware Version 104.
 108. Driver Version 11.20.04.
 109. Non-HA, single initiator only. Symmetrix microcode supported: 5266.41.29s or higher. 5566.42.29s or higher. 5267.29.20a or higher. 5567.36.20a or higher.
 110. HP-UX 11i v2.0 (HP-UX 11.23) is a IA-64 release and only runs on the HP Integrity rx family server.
 111. Minimum microcode revision level 5670.23.25.
 5568 and 5669 are on a RPQ basis at this time.
 112. Driver Version 1.01a9. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
 113. Firmware Version 1.01a2.

1. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.

2. Qualified and supported by HP.

3. Minimum OS revision is HP-UX 11.0 Rev 9812.

4. Adapter is Ultra-capable, but disabled by HP; HP 'Commercial Server' will negotiate bus as FWD; HP 'Technical Server' will negotiate bus as UWD.

5. A4800A and A5159A HBAs are both capable of Ultra 1 speeds, but ship from HP with a default setting of FWD. Symmetrix is supported at Ultra 1 speeds with both these HBAs. Ultra 1 can be enabled in the V-Class, N-Class, and L-Class, A-Class and Superdome PDC firmware. V-Class supports the A4800A Only.

HP e3000 MPE SYSTEMS – The above note applies but only includes the A-Class and N-Class Servers. The HP e3000 A-Class does not support the dual port HBA A5159A.

6. rp8400 requires minimum PDC firmware 13.10 or higher.

7. Symmetrix microcode supported: 5266.40.28 or higher, 5566.41.28 or higher, 5267.27.19 or higher, 5567.34.19 or higher.

8. Driver Version 11.11.09.

9. Minimum driver version for SNIA HBA API support with HP-UX 11.0 is B.11.00.10. Minimum driver version for SNIA HBA API support with HP-UX 11.11 is B.11.11.09.

10. A4800A and A5159A HBAs are both capable of Ultra 1 speeds, but ship from HP with a default setting of FWD. Symmetrix is supported at Ultra 1 speeds with both these HBAs. Ultra 1 can be enabled in the V-Class, N-Class, and L-Class, A-Class and Superdome PDC firmware. V-Class supports the A4800A Only.

11. Minimum OS revision is HP-UX 11.0 990P.

12. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.

13. Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).

14. The cables are the same as the Cxx mini 68S ('VHDCI' 8mm to SCSI3). Cables require termination at host end for N-Class, L-Class, A-Class and Superdome. Can be terminated either on cable, or on HBA, but not both.

15. rp7400 requires minimum PDC firmware 41.36 or higher.
16. rp5405, rp5430, rp5470, rp7400: (PA-8700 processors): Initial support with HP-UX 11.0 Sept 2001, 11i Sept 2001. Symmetrix microcode supported: 5266.40.28 or higher. 5566.41.28 or higher. 5267.27.19 or higher. 5567.34.19 or higher.
17. Arbitrated loop boot with PDC rev TSSW 3.1 or higher. Fabric boot with PDC rev TSSW 3.2 or higher.
18. HP A5158A FC-SW software requirement: FC-AL and FC-SW requires the HP A5158A Tachlite PCI Fibre Channel Adapter. The A5158A FC-SW software fabric driver version "AP0301", for HP-UX 11i is now available for download from HP's software depot site, <http://www.software.hp.com> under "drivers". It is referred to as the "hp pci tachyon tl fibre channel adapter", and requires the installation of dependent patch PHKL_22874 prior to installing the fabric driver, patches may be superceded or have co-dependencies as defined by HP.
19. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
20. HP-UX 11.0 switched fabric support is enabled with: fabric device driver version B.11.00.03 and higher; minimum operating system level HP/UX 11.0 990P with March 2000 HW-CR bundle and dependency patch PHKL_21381 patches may be superceded or have co-dependencies as defined by HP. Symmetrix microcode versions: 5265.49.31, 5266.20, 5566.22 or latest Symmetrix microcode versions.
21. Driver Version 11.00.10.
22. Requires PDC firmware N-Class 40.25,L-Class 40.26.
23. Requires PDC firmware 40.32 or higher.
24. Requires PDC firmware 7.3, 10.0 or higher.
25. The A6795A HBA is capable of supporting both 1 and 2 Gb speeds. QuickLoop is not supported with Brocade 3200/3800/12000 or EMC DS-16B2, ED-12000B.
26. Initial Symmetrix microcode support: 5x67 minimum of 5567.38 or 5267.31 .
27. Initial Symmetrix microcode support: 5568 minimum of 5568.34.14 .
27. HP-UX required patches: HP-UX 11.0 ACE: PHKL_23939, HP-UX 11i : PHKL_23626
28. As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)
 L2000 (product number A5191A)
 N4000 Revision A (product number A3639A)
 N4000 Revision B (product number A3639B)

29. Requires PDC firmware 40.26 or higher.
30. Requires minimum PDC firmware 42.03 or higher.
31. FC-AL and FC-SW topologies can co-exist on the same server but not on the same HBA, provided that the different topologies are attached to different HBAs
32. HP-UX 11.0 switched fabric support is enabled with: fabric device driver version B.11.00.03 and higher; minimum operating system level HP/UX 11.0 990P with March 2000 HW-CR bundle. Refer to Base Connectivity table for additional information.
33. Requires minimum PDC firmware 15.005 or higher.
34. Requires minimum PDC firmware 40.26 or higher.
35. Auto-sensing capability on the HBA is permanently enabled. There is no option to disable auto-sensing on the HBA.

HPQ MPE/ix HPQ

HPQ – HPQ MPE/ix							
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot	Comments

2	e3000 900 Series ⁵	HP-PB	HPQ MPE/ix: 6.0 ³ , 6.5.02 ^{3,6} , 6.5 ³ , 7.0.01 ⁶	HPQ 28696A ⁴	FWD	Y ²	See ¹
3	e3000 N-Class (N4000)	PCI	HPQ MPE/ix 7.0.01 ⁶	HPQ: A5149A ⁸ , A5150A ⁸	U2 LVD	Y ^{1,2}	See ¹
4	e3000 N-Class (N4000)	PCI	HPQ MPE/ix 7.5 ⁹ , 10	HPQ: A5149A ⁸ , A5150A ⁸	U2 LVD	Y ^{1,2,11}	
5	e3000 A-Class	PCI	HPQ MPE/ix: 7.0.01 ⁶ , 7.5 ⁹ , 10	HPQ A5149A ⁸	U2 LVD	Y ²	See ¹
6	e3000 N-Class (N4000)	PCI	HPQ MPE/ix 7.0.01 ⁶	HPQ: A4800A ⁷ , A5159A ⁷ , A5159B	UWD	Y ^{1,2}	See ¹
7	e3000 N-Class (N4000)	PCI	HPQ MPE/ix 7.5 ⁹ , 10	HPQ: A4800A ⁷ , A5159A ⁷ , A5159B	UWD	Y ^{1,2,11}	
8	e3000 A-Class	PCI	HPQ MPE/ix: 7.0.01 ⁶ , 7.5 ⁹ , 10	HPQ A4800A ⁷	UWD	Y ²	See ¹

1. HAF0 is supported with 6.5.02+ and 7.0.01+, and 7.5 on 9xx Series, A-Class and N-Class.
 2. RAID-1 ONLY Requires MPE_XL_SYSTEM_VOLUME_SET on a dedicated channel. Boot device maximum capacity is 4 GB.
 3. Symmetrix 8000 Series & 66/67 support: HP-UX 11.0, 11.0 ACE, 11.i. MPE/ix 6.0, 6.5, 6.5.02, 7.0, 7.0.01: Symmetrix 8000 Series 5568 support: HP-UX 11.0, 11i. MPE/ix 6.0, 6.5, 6.5.02, 7.0, 7.0.01
 4. HP 3000 Series 9x9 Core I/O card (A2372-60004 or A3453-60010 a.k.a Mustang) is supported for Symmetrix only if the 'dedicated SCSI bus' requirement above is met by disconnecting the internal devices attached to the Core I/O card (firmware patch FWSJXB6A required for this support.)
 5. The HP end-of-support for MPE/ix 5.0, 5.5 was 10/31/99 and 12/31/2000 respectively.
 6. MPE/ix 6.0, 6.5, 6.5.02 or 7.0, 7.0.01 require Symmetrix microcode: 5266.40.28 or higher, 5267.25.17 or higher, 5567.32.16 or higher, 5568.34.14 or higher.
 7. A4800A and A5159A HBAs are both capable of Ultra 1 speeds, but ship from HP with a default setting of FWD. Symmetrix is supported at Ultra 1 speeds with both these HBAs. Ultra 1 can be enabled in the V-Class, N-Class, and L-Class, A-Class and Superdome PDC firmware. V-Class supports the A4800A Only.
- HP e3000 MPE SYSTEMS – The above note applies but only includes the A-Class and N-Class Servers. The HP e3000 A-Class does not support the dual port HBA A5159A.
8. Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
 9. Requires Symmetrix microcode:
5266.40.28 or higher
5566.40.27 or higher
5267.25.17 or higher
5567.32.16 or higher
5568.34.14 or higher
 10. LDEV1, the boot volume, has no size limit in MPE/ix 7.5. The 4GB limit that existed in previous releases has been eliminated.
 11. LDEV1, the boot volume, has no size limit in MPE iX. The 4GB limit that existed in previous releases has been eliminated.

1. Apply latest revision of SCSI patches.
2. Refer to Base Connectivity, Clustered Host HPQ sections for connectivity details.
3. KZPSA–BB [FWD] has been discontinued by HPQ (Compaq).
4. OpenVMS 7.2–1, 7.2–1H1 FC–SW requires console firmware 5.6 or later and patch VMS721_fibre_SCSI–V0400. Available from <http://ftp1.support.compaq.com/public/>
5. Latest SCSI patch qualified: VMS721H1_FIBRE_SCSI–V0500
6. Latest qualified Alpha Systems firmware is V6.5.
7. Firmware Version A12.
8. Open VMS 7.1–2 requires console firmware 5.6 or later and patch VMS712_SCSI–V0300.
9. Firmware Version 5.57.
10. Requires Fibre Channel switch. Refer to Fibre Channel Connectivity – HPQ sections for connectivity details.
11. Open VMS 7.2–2 FC–SW requires console firmware 5.6 or later and patch VMS722_fibre_SCSI–V0100.
12. Latest SCSI patch qualified: VMS722_FIBRE_SCSI–V0400
13. Firmware Version 3.91A1.
14. Firmware Version 3.20x7.
15. Open VMS 7.3 FC–SW requires console firmware 5.6 or later and patch VMS73_update–V0100 or patch VMS73_fibre_SCSI–V0200.
16. Latest SCSI patch qualified: VMS73_FIBRE_SCSI–V0500
17. Latest SCSI patch qualified: VMS731_FIBRE_SCSI–V0300
18. KGPSA–CA/KGPSA–DA(FCA2354): Latest firmware revision 3.82A1
19. KGPSA–CA/KGPSA–DA(FCA2354): Minimum firmware revision 3.81A4
20. KGPSA–BC: Minimum firmware revision 3.03A1.
21. KGPSA–BC: Latest firmware revision 3.20X7.
22. The KGPSA–BC login to switch may fail if the Brocade switch port speed is set to auto–negotiate. Set the port speed to 1 Gb.
23. FCA2384(KGPSA–EA): Latest firmware revision 1.00X6
24. Firmware Version 1.00X6.

1. Minimum AlphaServer SRM console firmware V6.0 required for boot device support.
2. Tru64 V4.0F BL13 Patch Kit 2 may introduce problems with KZPBA adapters. Tru64 V4.0F latest qualified Patch Kit 8 (DUV40FB22AS0008–20030730).
3. V4.0F, V4.0G: 8 LUNs/Symmetrix Fibre director port (LUNs 000–007 valid).
4. Latest qualified Alpha Systems firmware is V6.5.
5. Firmware Version 5.57.
6. Tru64 V4.0G latest qualified Patch Kit 4 (T64V40GB22AS0004–20030731).
7. KZPSA-BB [FWD] has been discontinued by HPQ (Compaq).
8. Firmware Version A12.
9. Requires Fibre Channel switch. Refer to Fibre Channel Connectivity – HPQ sections for connectivity details.
10. Firmware Version 3.91A1.
11. Firmware Version 3.20X7.

12. Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).
13. Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).
14. V5.x: 255 LUNs/Symmetrix Fibre director port (LUNs 000-0FE valid) on Symmetrix 8000 Series, requires OVMS director bit setting (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, the LUN 000 array controller device will not be usable by the Tru64 host.
15. The KGPISA-BC login to switch may fail if the Brocade switch port speed is set to auto-negotiate. Set the port speed to 1 Gb.
16. Requires RPK
17. AlphaServer SC systems have special Tru64 UNIX operating system and AlphaServer SC System Software requirements.
18. Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).
19. AlphaServer GS1280,ES80,ES47: Minimum Tru64 V5.1B with Patch Kit 1 (T64V51BB1AS0001-20021229)
20. Firmware Version 1.00X6.

- Mixed FC-AL and FC-SW are supported on the same server.
- Symmetrix 8000 Series: 66/67 support at AIX 4.3.x, 5568 support at AIX 4.3.3, 5.1, 5.2.
- Fibre Channel HBAs: DCCG141-0000: LP7000e copper DCCG147-0000: LP8000 copper DCCG148-0000: LP8000 fibre
- Fibre Channel device driver distributed and supported by Bull.
- Bull supplies the appropriate cables.
- The latest qualified operating system is AIX 4.3.3 except for RL Series.
- Mixed FC-AL and FC-SW supported on the same server, MSKG008-0000 = Brocade SilkWorm 2800.
- 32-bit kernel support only with AIX 5.1.
- AIX 5.1 32/64-bit kernel support.
- MSKG0008-0000 = Brocade® SilkWorm® 2800.
- LPAR and SMP modes supported.
- SMDF007-B000-Brocade SilkWorm 3800
SMDF008-B000-Brocade SilkWorm 3800

- For all PCI-based hosts only: See http://www-1.ibm.com/servers/eserver/pseries/library/hardware_docs/sa38/380538.pdf for appropriate HBA placement guidelines.
- The following link provides detailed data for all 9076-SP2 models and feature codes:
http://www1.ibm.link.ibm.com/cgi-bin/master?request=salesmanual&parms=SMS&xh=NTZH*daEMSRi4n1USenGnN9332&hi=usa.main%7Csalesmanual%5E&type=D&search=9076&title=T&product=9076
- AIX 5.1 32/64 bit Kernel supported. Minimum PowerPath Version 2.1.2 supported. Requires minimum EMC ODM fileset support 5.0.0.0.
- Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
- AIX 5.1 only supported with 32-bit kernel. Minimum PowerPath Version 2.1.2 supported. Requires minimum EMC ODM fileset support 5.0.0.0.
- PowerPC 32-bit only.
- HBA and driver available exclusively as EMC Fibre Channel Interface V2.0 for AIX Platforms. Latest PTF package (V2.0.0.3_PTF.tar.Z) can be downloaded from the EMC FTP server at <ftp://ftp.emc.com/pub/elab/aix/EMC-FC-Kit>
- Mixed FC-AL and FC-SW are supported on the same server.
- No longer available
- Requires minimum Symmetrix microcode level 5265.39.25. Requires minimum AIX APAR IY05369. Requires minimum EMC ODM fileset support (4.3.3.0 IBM Fibre Channel interface support for Symmetrix).
- System/Service processor combined microcode Version SPH02254/sh020307 dated 11/20/2002 or later.
- AIX 4.3.3 ML9, APAR IY22024
- For all PCI-based hosts only: see HBA placement guidelines in the IBM document PCI Adapter Placement Reference SA38-0538-6, available at http://www-1.ibm.com/servers/eserver/pseries/library/hardware_docs/sa38/380538.pdf
- Booting from a PowerPath device is supported with FC-SW topology only.
- Minimum Powerpath version 3.0.2. For Powerpath patches 3.0.x, the bootfix.sh script is required for boot support. See the EMC Primus case ID emc58038 for more details and the PowerPath Release Notes for installation
- Obtain the EMC Symmetrix and AIX Fibre boot document from avatar.eng.emc.com for installation and configuration instructions.
- Fibre boot when used under AIX 4.3 requires APAR IY42989 which can be obtained from IBM at <https://techsupport.services.ibm.com/server/fixes?view=pSeries>.
- IBM Native Fibre Channel drivers with feature code 6227 and with feature code 6228 are supported on the same server. Feature 6228 and 6239 are supported on the same server. Mixed FC-AL and FC-SW are supported on the same server. 6227 filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1000f7.rte; 6228 filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1000f7.rte; 6239 filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1000f7.rte
- Firmware Version 3.22A1. Minimum supported level.
- Requires minimum Symmetrix microcode level 5265.48.30. Requires minimum AIX APAR IY08960, IY03872. Requires minimum EMC ODM fileset support (4.3.3.1 IBM Fibre Channel interface support for Symmetrix).
- System microcode CL020407 or later.
- System/Service processor combined microcode Version SST01256/SS010614 dated 10/23/2001 or later.
- System/Service processor combined microcode Version L02113/ag010611 or later.
- System microcode CM020407 or later.
- System microcode MM020407 or later.
- System/Service processor combined microcode Version NAN02066/SC020308 dated 03/29/2002 or later.
- System/Service processor combined microcode Version 20020920 dated 11/19/2002 or later.
- Requires minimum AIX 4.3.3 with maintenance level 08.
- Requires minimum EMC ODM fileset support (4.3.3.1 IBM Fibre Channel interface support for Symmetrix). Device driver df1000f9 is distributed by IBM.
- Firmware Version 3.82A1. Minimum supported level.

31. The Following feature codes are supported: 2054: Power 3 High Node 2055: SP expansion I/O 2056: 375 MHz Power 3 thin node 2058: 375 MHz Power 3 high node.
32. AIX 5.1 ML1, APAR IY21957
33. Fibre boot when used under AIX 5.1 requires APAR IY40885 which can be obtained from IBM at <https://techsupport.services.ibm.com/server/fixes?view=pSeries>.
34. See http://www.rs6000.ibm.com/resource/hardware_docs/sa38-0538/380538.pdf for appropriate HBA placement guidelines
35. Requires minimum ODM fileset support (5.0.0.0 EMC Symmetrix Fibre Channel support software).
36. AIX 5.1 32/64 bit Kernel supported. Requires minimum EMC ODM fileset support 5.0.0.0.
37. AIX 5.1 supported with 32/64-bit kernel. Requires minimum EMC ODM fileset support 5.0.0.0.
38. System/Service processor combined microcode Version CLT02066/ct020307 dated 04/04/2002 or later.
39. Minimum microcode levels RH0 20413 dated 05/22/2002 or later.
40. System/Service processor combined microcode Version RH020413 dated 05/22/2002 or later.
41. AIX 5.1 ML1, APAR IY21957 or higher.
42. System/Service processor combined microcode Version RR020822 dated 09/19/2002 or later.
43. Latest APAR for PSSP 3.1.1 is IY17870.
44. **FC-SW and FC-AL are supported on the same server.**
45. Requires minimum AIX5.1 with maintenance level 03 APAR IY32749.
46. System/Service processor combined microcode Version RK021120 dated 12/11/2002 or later.
47. Minimum Powerpath version 3.0.3 is supported.
48. Fibre boot when used under AIX 5.2 requires APAR IY41028 which can be obtained from IBM at <https://techsupport.services.ibm.com/server/fixes?view=pSeries>.
49. AIX 5.2 32/64 bit kernel supported. Requires Minimum EMC ODM fileset support 5.0.0.0.
50. System/Service processor combined microcode Version RK030206 dated 03/31/2003 or later.
51. Requires AIX 5.1 with minimum maintenance level 04 APAR IY44478.
52. Firmware Version 1.00X5. Minimum supported level.
53. Requires AIX 5.2 with minimum maintenance level 01 APAR IY44479.
54. **Requires CLArrayS3.5.2.0.7**
55. **AIX 5.2 requires Operating System APAR# IY36782, IY37744 and IY37746 for support with HACMP and HACMP/ES version 4.5 and PSSP 3.5.**
56. **Requires AIX APAR IY48995**
57. **IBM 6227 and 6228 adapters are supported on the same server. Mixed FC-AL and FC-SW are supported on the same server.**

- Symmetrix 8000 Series: 66/67 support: DYNIX/ptx 4.2.4(66 only), 4.4.x, 4.5.1, 4.6.0(Symmetry @ 4.2).
- Dynix 4.5.1 is not supported on Symmetry 2000.
- Attachment is through an integrated Fibre Channel to SCSI Bridge C10V cable requires switched termination. ptx 4.4.2 requires a minimum Symmetrix microcode level of 5264.25.23
- Firmware Version v1.5.5. FC to SCSI Bridge.
- FC-AL support only available in DYNIX/ptx 4.5.0 and above.
- Boot device cannot be mapped to FC-to-SCSI bridges.
- Not supported on the EMC DP3-FCD4 or on the DP3-FCD42G(S).
- EMC DP3-FCD4 supported on DYNIX/ptx 4.4.8, 4.4.9, 4.4.10, 4.5.2, 4.5.3, and 4.6.1 only. Requires minimum 5x67 microcode 5567.34.19A, or 5568.27.12A.
- EMC DP3-FCD42G and EMC DP3-FCD42GS supported on DYNIX/ptx 4.4.8, 4.4.9 and 4.4.10 only.
- DYNIX/ptx 4.4.10 and 4.5.3 are not supported in FC-AL Configurations
- Firmware Version v1.5.5.
- Attachment is through and integrated Fibre Channel to SCSI bridge C10V cable requires switched termination.
- Only supported in cluster configurations

IBM MVS/ESA

1. Symmetrix DMX series are supported only on V5R2 and require the use of the LSE–FHDA for software.

2. 8HDA and FHDA are the only load compatible Load Source Extenders (LSE)

3. Minimum Engenuity Version 5568.56.22 or later can support 1Gb or 2Gb mode using DP3–FCD4 or DP3–FCD42G. V5R2 is required for OS/400 for 2Gb support.

4. CopyPoint, TimeFinder, and RDF fail–over require 5568 patch 21139, 5670 requires patch 21139 (rev 5)

5. Minimum Engenuity for V4R5 5065.26.12, 5266.22.18, 5566.23.18, 5568.36.14A.

6. Can NOT use NEW RAID (PCI–X) controller (source) in fail over AND/OR CopyPoint to an old controller (PCI) target. New to new is supported and old to new is supported.

7. FC–HBA #2787 is supported V5R2 or higher

8. Primary Load Source: UHDA. Primary Load Source used for stand–alone or primary partition.

9. Secondary Load Source: UHDA. Secondary Load Source used for secondary partition in an expansion bus.

10. These systems can come with an SPD–bus in the base–system cabinet, but can also be configured with a "PCI–ONLY" Card–Cage. In the "PCI–ONLY" configuration, and SPD attachment and SPD Expansion Cabinet is required to attach the SCSI #6501 FWD HBA.

Microsoft Windows 2000

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiON non–disruptive upgrades for Windows systems booting from CLARiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 2.20.
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version 2.12s4.
- Driver Version 2.21a7.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Firmware Version 3.90a7.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.1.20.
- Driver Version 8.2.3.21.
- Qlogic SANSurfer/SANBlade Manager is not supported.
- Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.

By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.

The workaround is to perform "symcfg discover" after rebooting.

- Firmware Version 1.01a2.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- SNIA API Supported.
- Driver/Firmware available at <http://www.emulex.com>
- Firmware Version 3.30a7.
- Driver Version 2.13a4.
- Driver Version 4.10.4002 set v1.02. (Native on Windows 2000 Installation CD-ROM)
- Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
- HBA BIOS is 3.10.0.
- Firmware Version 1.80a3.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

- EMC recommends that HBAs of different vendors not be used in the same host server.
 - Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
 - If using Dell PERC Controller, requires PERC 3 with OpenManager 3.0 and Array Manager 3.1. The afamgt.sys must be version 2.6.0.3486 (or above)..
 - SNIA API Supported.
 - Not supported with the HP NetServer LC-2000.
 - Driver/Firmware available at <http://www.emulex.com>
 - Driver Version 2.13a4.
 - Firmware Version 3.30a7.
 - The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
 - Driver Version 2.21a7.
 - Firmware Version 3.90a7.
 - PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
 - HBA BIOS is 2.20.
 - Requires Legacy PCI slot (not available on most new servers.)**
 - Driver Version 2.12s4.
 - Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
 - QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
 - The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
 - Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.
- NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
 - Driver Version 8.2.3.21.
 - Driver Version 8.2.1.20.
 - Firmware Version 1.01a2.
 - Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
 - The LP9002-E now ships with the LP9002L-E low profile adapter.
 - Linux v2.4.x Kernels support a maximum of 128 devices per system.
 - Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
 - HBA BIOS is 3.10.0.
 - Driver Version 4.10.4002 set v1.02. (Native on Windows 2000 Installation CD-ROM)
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 - Firmware Version 1.80a3.
 - Not supported with Emulex LP8000-EMC HBA.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 2.20.
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version 2.12s4.
- EMC requires and supports only one port of the dual-channel adapter.
- Driver Version 2.20b. (Native on Windows 2000 Installation CD–ROM)
- The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 2.21a7.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Firmware Version 1.80a3.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 2.20.
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version 2.20b. (Native on Windows 2000 Installation CD-ROM)
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 2.21a7.
- Driver Version 2.12s4.
- Must use standard PCI 32bit/33MHz slot for SCSI
- Firmware Version 3.90a7.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- SNIA API Supported.
- Driver/Firmware available at <http://www.emulex.com>
- Driver Version 2.13a4.
- Firmware Version 3.30a7.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.

22. Driver Version 8.2.1.20.
 23. Driver Version 8.2.3.21.
 24. Driver Version 8.1.5.20.
 25. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.

1. EMC recommends that HBAs of different vendors not be used in the same host server.

2. Adaptec AHA-2944UW has been OEM'ed by HP as A5252A and A5252B.

3. HBA BIOS is 2.20.

4. Requires Legacy PCI slot (not available on most new servers.)

5. Driver Version 2.12s4.

6. (Adaptec AHA-2944UW)

7. Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.

8. This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.

9. Driver Version 4.10.4002 set v1.02. (Native on Windows 2000 Installation CD-ROM)
10. Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
11. HBA BIOS is 3.10.0.
12. Includes both Pentium PRO and XEON models
13. QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
14. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
15. Driver Version 8.2.1.20.
16. Driver Version 2.21a7.
17. Firmware Version 3.90a7.
18. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
19. Driver Version 8.2.3.21.
20. Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
21. SNIA API Supported.
22. Driver/Firmware available at <http://www.emulex.com>
23. Driver Version 2.13a4.
24. Firmware Version 3.30a7.
25. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
26. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
27. Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

28. HPQ Proliant ML350 (1GHz) : D04,F04 (11/13/2000) , HPQ Proliant ML350(600,733,800,866,933 MHz) : D02, F04 (11/13/2000).
29. The LP9002-E now ships with the LP9002L-E low profile adapter.
30. **Supported by direct attach only**
31. HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
32. Not supported with the HP NetServer LC-2000.
33. When used with the HP NetServer LC2000: 32 device maximum.
34. Requires manual intervention on bootstrap to clear "new hardware found" message box at boot time.
35. The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
36. Does not support Connectrix DS-16M, DS-32M, or McData ED-5000
37. Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_rnotes/bsdmatrix/matrix213991.html
38. (HHBA-5101BK-01)
39. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
40. Firmware Version 1.01a2.
41. Driver Version 8.1.5.20.
42. Driver/BIOS are available at <http://www.qlogic.com>
43. Dual port fibre Channel controller.
44. Supports BIOS 1.34. Supports SNIA HBA API. Driver and BIOS available at <http://www.qlogic.com>.
45. Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
46. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
47. Firmware Version 1.80a3.
48. **Requires minimum BIOS v4.01 rev A (5/17/2002) for use with Emulex HBAs.**
49. **Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**
50. **Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. Supports SNIA HBA API.**
51. **EMC does not support the Emulex equivalent of the FCA2101 (LP952.) Use EMC supported driver for LP9002 from <http://www.emulex.com>.**
52. Firmware Version 3.90a7. Contact HPQ for supported firmware versions for this HBA.

- EMC recommends that HBAs of different vendors not be used in the same host server.
 - QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
 - Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
 - Driver Version 8.2.1.20.
 - This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
 - For IBM xSeries Servers running Windows NT and Windows 2000 with IBM ServerRaid controller 4M, the ServerRaid Driver must be 6.00 or above for use with EMC PowerPath 3.0 and above. IBM driver can be downloaded at: <http://www-3.ibm.com/pc/support/site.wss/document.do?lnocid=MIGR-39723>
 - Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
 - HBA BIOS is 3.10.0.
 - Driver Version 4.10.4002 set v1.02. (Native on Windows 2000 Installation CD-ROM)
 - Driver Version 8.2.3.21.
 - Supported by direct attach only
 - HBA BIOS is 2.20.
 - Requires Legacy PCI slot (not available on most new servers.)**
 - Driver Version 2.12s4.
 - Adaptec AHA-2944UW has been OEM'ed by HP as A5252A and A5252B.**
 - Driver Version 2.20b. (Native on Windows 2000 Installation CD-ROM)
 - Firmware Version 3.90a7.
 - Driver Version 2.21a7.
 - Not supported with the HP NetServer LC-2000.
 - The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
 - SNIA API Supported.
 - Driver/Firmware available at <http://www.emulex.com>
 - Driver Version 2.13a4.
 - Firmware Version 3.30a7.
 - For IBM Netfinity and xSeries Intel servers only.
 - (QLA2200) For IBM xSeries and Netfinity servers only.
 - Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
 - Driver Version 8.1.5.20.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 - Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
 - Qlogic SANSurfer/SANBlade Manager is not supported.
 - The LP9002-E now ships with the LP9002L-E low profile adapter.
 - The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
 - Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.
- NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.
- This HBA is equivalent to the qLogic QLA2310.
 - Host must be offline for interfamily Symmetrix microcode upgrade.
 - EMC requires and supports only one port of the dual-channel adapter.
 - This HBA is equivalent to the qLogic QLA2340.
 - Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
 - Firmware Version 1.01a2.
 - (Adaptec AHA-2944UW)
 - Requires manual intervention on bootup to clear "new hardware found" message box at boot time.
 - The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
 - Does not support Connectrix DS-16M, DS-32M, or McData ED-5000

45. Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_notes/bsdmatrix/matrix213991.html
 46. (HHBA-5101BK-01)
 47. Supported via RPQ and only one of the two ports can be used.
 48. PowerPath supported. ATF/CDE not supported.
 49. It is recommended that the QLogic QLA2340 is not installed in Slot 1.
 50. Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.
 51. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
 52. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
 53. Due to the HS20's embedded FC-SW design, EMC Volume Logix is required to assign LUNS to each individual blade server.
 54. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
 55. Firmware Version 1.80a3.
 56. **Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
 57. **Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**
 58. **Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 2.20.
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version 2.12s4.
- SNIA API Supported.
- Driver/Firmware available at <http://www.emulex.com>
- Driver Version 2.13a4.
- Firmware Version 3.30a7.
- The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 2.21a7.
- Firmware Version 3.90a7.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Driver Version 8.1.5.20.
- Driver Version 8.2.1.20.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.3.21.
- Supported by direct attach only
- Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3–U2SD4L).
- HBA BIOS is 3.10.0.
- Driver Version 4.10.4002 set v1.02. (Native on Windows 2000 Installation CD–ROM)
- Symmetrix 8000 Series & 66/67 support at MPRAS 3.02, Windows 2000 SP2.
- Requires package PSCSI302 Ver.02.10.10.09 or higher available from NCR.
- Driver Version 1.8.30.
- NCR recommended driver version is 8.0.8.1
- Firmware Version 1.01a2.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without –EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 2.20.
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version 2.20b. (Native on Windows 2000 Installation CD–ROM)
- Driver Version 2.12s4.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3–U2SD4L).
- HBA BIOS is 3.10.0.
- Driver Version 4.10.4002 set v1.02. (Native on Windows 2000 Installation CD–ROM)
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.3.21.
- Driver Version 8.2.1.20.
- The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Driver Version 2.21a7.
- Firmware Version 3.90a7.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 2.20.
- Requires Legacy PCI slot (not available on most new servers.)
- Driver Version 2.12s4.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.1.20.
- Driver Version 8.2.3.21.
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

- Driver Version 2.21a7.
- Firmware Version 3.90a7.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- SNIA API Supported.
- Driver/Firmware available at <http://www.emulex.com>
- Driver Version 2.13a4.
- Firmware Version 3.30a7.
- Qlogic SANSurfer/SANBlade Manager is not supported.
- Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.

By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.

The workaround is to perform "symcfg discover" after rebooting.

- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
- HBA BIOS is 3.10.0.
- Driver Version 4.10.4002 set v1.02. (Native on Windows 2000 Installation CD-ROM)
- Qlogic SanBlade Manager is not supported.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Firmware Version 1.80a3.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
- Refer to the Stratus, Bull or NEC documentation for hardware, software and non-storage related setup and configuration.
- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.

 - Driver Version 2.13a4.
 - Firmware Version 3.30a7.
 - The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
 - Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3–U2SD4L).
 - HBA BIOS is 3.10.0.
 - Driver Version 4.10.4002 set v1.02. (Native on Windows 2000 Installation CD–ROM)
 - Firmware Version 1.01a2.
 - Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
 - Firmware Version 1.80a3.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.

Stratus

Stratus – Microsoft Windows 2000						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
1	ftServer 6500 ^{4, 5, 8, 18, 19, 20}	PCI	Microsoft Windows 2000 Advanced Server SP3 ^{1, 17}	QLogic QLA2310F–E–SP2, 3, 10	FC–AL, FC–SW	N
2	ftServer: 3210 ^{4, 5, 6, 7, 8, 9} , 3220 ^{4, 5, 6, 7, 8, 9} , 3300 ^{4, 8, 14, 15, 16} , 5200 ^{4, 5, 11, 12, 13}	PCI	Microsoft Windows 2000 Advanced Server: SP2 ¹ , SP3 ^{1, 17} , SP4 ¹	QLogic QLA2310F–E–SP2, 3, 10	FC–AL, FC–SW	N
3	ftServer: 5240 ^{4, 5, 8, 18, 19, 20} , 5600 ^{8, 21} , 6600 ^{8, 21}	PCI	Microsoft Windows 2000 Advanced Server: SP3 ^{1, 17} , SP4 ¹	QLogic QLA2310F–E–SP2, 3, 10	FC–AL, FC–SW	N

- EMC recommends that HBAs of different vendors not be used in the same host server.
- Supports SANSurfer/SANBlade Manager is not supported.
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.
By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.
The workaround is to perform "symcfg discover" after rebooting.

- Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
- Supports Stratus OS 1.2.2.X through 2.1.X.
 - Requires Stratus ftServer OS 1.4.x or greater.
 - ftServer OS 2.1.x requires PowerPath 3.0.5 or greater.
 - ftServer OS 1.4.x requires PowerPath 3.0.2.
 - Driver Version 8.2.3.21.
 - Supports Stratus OS 1.2.2.X through 1.4.X.
 - Requires Stratus ftServer OS 1.4.x.
 - Requires PowerPath 3.0.2.
 - Supports Stratus OS 2.0.X through 2.1.X.
 - Requires Stratus ftServer OS 2.0.x or greater.
 - ftServer OS 2.0.x requires PowerPath 3.0.2.
 - Refer to the Stratus, Bull or NEC documentation for hardware, software and non–storage related setup and configuration.
 - Supports Stratus OS 1.3.X through 2.1.X.
 - ftServer OS 1.4 requires PowerPath 3.0.2.
 - Requires Stratus ftServer OS 1.4.x or 2.1.x.
 - Requires Stratus ftServer OS 2.1.x.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 1.31.
- Supported via RPQ and only one of the two ports can be used.
- Driver Version 2.20b. (Native on Windows 2000 Installation CD-ROM)
- Firmware Version 3.90a7.
- Driver Version 2.21a7.
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

- Supported by direct attach only
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Hardware and adapters similar to Unisys ES7000-100, ES7000-200.
- The Libra 18x includes native MCP, and Virtual Machine for MCP (Windows MCPvm) partitions
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
- HBA BIOS is 3.10.0.
- Driver Version 4.10.4002 set v1.02. (Native on Windows 2000 Installation CD-ROM)
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.3.21.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Firmware Version 1.80a3.
- Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.

Microsoft Windows 2003

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiON non-disruptive upgrades for Windows systems booting from CLARiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

Bull

Bull – Microsoft Windows 2003						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
1	Express 5800: 320Lb, 320Lb-R, 330Mb-R ^{6, 7} , 340Ha-R	PCI	Microsoft Windows 2003: Enterprise Edition (Advanced Server) ¹ , Standard Edition (Server) ¹	QLogic QLA2310F-E-SP ^{2, 3, 4, 5}	FC-AL, FC-SW	N
2	NovaScale: 4020 (Itanium2), 4040 (Itanium2), 5080 (Itanium2), 5160 (Itanium2)	PCI-X	Microsoft Windows 2003 64-Bit: Enterprise Edition (Advanced Server), Standard Edition (Server)	Emulex LP9802-E ^{8, 9, 10, 11, 12, 13}	FC-AL, FC-SW	N

1. EMC recommends that HBAs of different vendors not be used in the same host server.
2. Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
3. Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
4. Qlogic SANSurfer/SANBlade Manager is not supported.
5. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
6. Supports Stratus OS 1.3.X through 2.1.X.
7. Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
8. QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
9. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
10. Emulex driver and BIOS available from <http://www.emulex.com>.
11. PowerPath requires driver 1.01x1 with Firmware 1.01A2 and StorPORT fix Q823728
12. Driver Version Emulex SCSI port driver v2.21a7.
13. Driver Version Emulex StorPORT driver v1.01x1.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Firmware Version 3.90a7.
- Firmware Version 1.01a2.
- Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.

11. Firmware Version 1.80a3.
12. Includes both Pentium PRO and XEON models
13. **Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.**
14. Driver Version 2.21a7. EMC does not support the Emulex equivalent of the FCA2101 (LP952.) Use EMC supported driver for LP9002 from <http://www.emulex.com>.
15. Firmware Version 3.90a7. Contact HPQ for supported firmware versions for this HBA.
16. **No EMC Layered Applications supported on IA64 server platforms**
17. Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]

1. EMC recommends that HBAs of different vendors not be used in the same host server.
2. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
3. Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
4. Firmware Version 3.90a7.
5. Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
6. Firmware Version 1.01a2.
7. Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
8. Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
9. This HBA is equivalent to the QLogic QLA2340.
10. This HBA is equivalent to the QLogic QLA2310.
11. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
12. Driver Version 8.2.3.21.
13. Driver Version 8.2.3.27. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
14. **Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.**
15. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.

16. Due to the HS20's embedded FC-SW design, EMC Volume Logix is required to assign LUNS to each individual blade server.
17. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
18. Firmware Version 1.80a3.
19. **Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
20. **Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**
21. **No EMC Layered Applications supported on IA64 server platforms**
22. Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Firmware Version 3.90a7.
- Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Firmware Version 1.01a2.
- Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.
 By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.
 The workaround is to perform "symcfg discover" after rebooting.

- Qlogic SanBlade Manager is not supported.
- Qlogic SANSurfer/SANBlade Manager is not supported.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Firmware Version 1.80a3.
- No EMC Layered Applications supported on IA64 server platforms**
- This HBA is equivalent to the QLogic QLA2340.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- This HBA is equivalent to the Emulex LP982.
- Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Supports Stratus OS 1.3.X through 2.1.X.
- Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
- EMC does not support the Emulex equivalent of N8190–105. Check with NEC on where to download the latest supported firmware and boot BIOS for this adapter.**

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Firmware Version 3.90a7.
- Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Firmware Version 1.01a2.
- Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Firmware Version 1.80a3.
- No EMC Layered Applications supported on IA64 server platforms
- Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]

Microsoft Windows NT

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non-disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN. NOTE: Windows NT installation will fail immediately after installing Network Services for hosts that use an Intel Network Interface Card (NIC).

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 5.96F.
- BusLogic Driver available at: <http://www.mylex.com/support/productgd/index.html>
- Data General servers that are rack-mountable (designated with an "R") are supported.
- Driver Version 5.01.
- HBA BIOS is 2.20.
- Driver for Adaptec available at: <http://www.adaptec.com/worldwide/support/supplyproduct.html?cat=Technology/SCSI+Host+Adapters&fromPage=driverindex>
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version 2.12s4.
- AHA-2944W is no longer available in distribution channels.**
- HBA BIOS is 6.26.
- Driver Version 2.36.
- HBA BIOS is 1.26.
- Driver Version 1.3.00.
- Dual port fibre Channel controller.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Driver Version 8.1.5.20.
- Firmware Version 3.90a7.
- Driver Version 2.20a12.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- SNIA API Supported.
- Driver/Firmware available at <http://www.emulex.com>
- Firmware Version 3.30a7.
- Driver Version 2.13a4.

26. HBA BIOS is 1.34.
27. QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
28. Driver/BIOS are available at <http://www.qlogic.com>
29. Driver Version 8.1.5.21.
30. Qlogic SanBlade Manager is not supported.
31. Qlogic SANSurfer/SANBlade Manager is not supported.
32. The LP9002-E now ships with the LP9002L-E low profile adapter.
33. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 5.96F.
- BusLogic Driver available at: <http://www.mylex.com/support/productgd/index.html>
- Driver Version 5.01.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- Dell PowerEdge supports a maximum of 2 Emulex HBAs at one time and the total power cannot exceed 20 Watts.
- HBA BIOS is 2.20.
- Driver for Adaptec available at: <http://www.adaptec.com/worldwide/support/suppyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version 2.12s4.
- AHA-2944W is no longer available in distribution channels.**
- HBA BIOS is 6.26.
- Driver Version 2.36.
- HBA BIOS is 1.26.
- Driver Version 1.3.00.
- If using Dell PERC Controller, requires PERC 3 with OpenManager 3.0 and Array Manager 3.1. The afamgt.sys must be version 2.6.0.3486 (or above)..
- Dual port fibre Channel controller.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Driver Version 8.1.5.20.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Driver Version 2.20a12.
- Firmware Version 3.90a7.
- HBA BIOS is 1.34.
- QLLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Driver/BIOS are available at <http://www.qlogic.com>
- Driver Version 8.1.5.21.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- Driver Version 2.09D.
- (HHBA-5101BK-01)
- Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_rnotes/bsdmatrix/matrix213991.html
- Requires manual intervention on bootup to clear "new hardware found" message box at boot time.
- The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- HBA BIOS is 1.37.
- Driver Version 6.16.

1. EMC recommends that HBAs of different vendors not be used in the same host server.

2. HBA BIOS is 5.96F.

3. BusLogic Driver available at: <http://www.mylex.com/support/productgd/index.html>

4. Driver Version 5.01.
5. Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
6. Includes both Pentium PRO and XEON models
7. This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
8. HBA BIOS is 2.20.
9. Driver for Adaptec available at: <http://www.adaptec.com/worldwide/support/suppbyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
10. **Requires Legacy PCI slot (not available on most new servers.)**
11. Driver Version 2.12s4.
12. **AHA-2944W is no longer available in distribution channels.**
13. HBA BIOS is 6.26.
14. Driver Version 2.36.
15. HBA BIOS is 1.26.
16. Driver Version 1.3.00.
17. (Adaptec AHA-2944UW)
18. Driver Version 2.09D.
19. HBA BIOS is 1.37.
20. Driver/BIOS are available at <http://www.qlogic.com>
21. Driver Version 6.16.
22. Requires manual intervention on bootup to clear "new hardware found" message box at boot time.
23. The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
24. Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_notes/bsdmatrix/matrix213991.html
25. (HHBA-5101BK-01)
26. Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
27. HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
28. Driver Version 8.1.5.20.
29. Firmware Version 3.90a7.
30. Driver Version 2.20a12.
31. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
32. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
33. Dual port fibre Channel controller.
34. Requires BIOS v4.01 rev A (5/17/2002) for use with Emulex HBAs.
35. SNIA API Supported.
36. Driver/Firmware available at <http://www.emulex.com>
37. Firmware Version 3.30a7.
38. Driver Version 2.13a4.
39. HBA BIOS is 1.34.
40. QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
41. Driver Version 8.1.5.21.
42. Firmware Version 1.01a2.
43. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
44. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
45. Driver Version 4.04.
46. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.

1. EMC recommends that HBAs of different vendors not be used in the same host server.

2. HBA BIOS is 5.96F.

3. BusLogic Driver available at: <http://www.mylex.com/support/productgd/index.html>

4. For IBM xSeries Servers running Windows NT and Windows 2000 with IBM ServerRaid controller 4M, the ServerRaid Driver must be 6.00 or above for use with EMC PowerPath 3.0 and above. IBM driver can be downloaded at: <http://www-3.ibm.com/pc/support/site.wss/document.do?indocid=MIGR-39723>

5. Driver Version 5.01.
6. This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
7. HBA BIOS is 2.20.
8. Driver V2.12S1 is required for Adaptec AHA-2944UW to work in IBM Netfinity 5000 and 7000-M10.
9. Driver for Adaptec available at: <http://www.adaptec.com/worldwide/support/suppyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
10. **Requires Legacy PCI slot (not available on most new servers.)**
11. Driver Version 2.12s4.
12. Trimetra XtraSERVER Windows NT Additions package BN553205
13. **AHA-2944W is no longer available in distribution channels.**
14. HBA BIOS is 6.26.
15. Driver Version 2.36.
16. HBA BIOS is 1.26.
17. Driver Version 1.3.00.
18. Dual port fibre Channel controller.
19. Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
20. Driver Version 8.1.5.20.
21. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
22. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
23. Firmware Version 3.90a7.
24. Driver Version 2.20a12.
25. For IBM Netfinity and xSeries Intel servers only.
26. (QLA2200) For IBM xSeries and Netfinity servers only.
27. SNIA API Supported.
28. Driver/Firmware available at <http://www.emulex.com>
29. Driver Version 2.13a4.
30. Firmware Version 3.30a7.
31. HBA BIOS is 1.34.
32. QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
33. Driver/BIOS are available at <http://www.qlogic.com>
34. Driver Version 8.1.5.21.
35. Qlogic SanBlade Manager is not supported.
36. Qlogic SANSurfer/SANBlade Manager is not supported.
37. Firmware Version 1.01a2.
38. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
39. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
40. It is recommended that the QLogic QLA2340 is not installed in Slot 1.
41. This HBA is equivalent to the qLogic QLA2310.
42. Host must be offline for interfamily Symmetrix microcode upgrade.
43. This HBA is equivalent to the qLogic QLA2340.
44. (Adaptec AHA-2944UW)
45. Driver Version 2.09D.
46. HBA BIOS is 1.37.
47. Driver Version 6.16.
48. Requires manual intervention on bootup to clear "new hardware found" message box at boot time.
49. The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
50. Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_r/notes/bsdmatrix/matrix213991.html
51. (HHBA-5101BK-01)
52. Requires NCR WorldMark Server.
53. Driver Version 4.15 or higher.
54. Driver Version 2.21.
55. The LP9002-E now ships with the LP9002L-E low profile adapter.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 2.20.
- Driver for Adaptec available at: <http://www.adaptec.com/worldwide/support/supplyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
- Driver Version 2.12s4.
- Servers are not supported on Symmetrix 5.0.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Supported by Unisys only.
- Used in clustered environments only.
- Driver Version 6.16.
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without –EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

- Driver Version 2.20a12.
- Firmware Version 3.90a7.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Driver Version 8.1.5.20.

- Limited support available from NCR – requires RPQ
- Symmetrix 8000 Series & 66/67 support at MPRAS 3.02, Windows 2000 SP2.
- Limited support available for MPRAS 3.01.
- Dual-port SCSI is not offered on the 4700
- Qualified by NCR.
- Requires package: PKERN302, PS MBAS302
- Driver Version 1.08. BIOS version 1.76, available at <http://www.qlogic.com>
- Requires package PSCSI302 Ver.02.10.10.09 or higher available from NCR.

- Supports FC-AL point-to-point only.
- When installing NetWare for fabric boot (when operating system is not installed in the local host) on the Symmetrix, create only one LUN and then perform the install. To install a second server that will be fabric boot, repeat the process by creating one additional LUN and then loading the operating system to it. Continue this process until the desired number of fabric boot servers have been reached. Conditions exist where several LUNs are initially created and you perform your first install, NetWare will sometimes acquire and stripe the operating system across several of the newly created LUNs.
- NetWare boot support is contingent on migration of the DOS boot partition to an NSS partition. NetWare will warn you of the possibility of data corruption if you convert the DOS boot partition to an NSS partition. The risk of data corruption is during I/O to the C: drive while in the NetWare debugger, or while writing reboot log files during an "Auto Restart After Abend". When you load DOSFAT, please set "Auto Restart After Abend" to 0 to avoid the possibility of data corruption.
- Maximum number of NWFS volumes that can be mounted is 64.
- Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.**
- Edit config.sys with the following: Files=100 Buffers=99
- To enable failover with fabric boot DOSFAT.NSS must be loaded from the autoexec.ncf. In a failed condition the c:\ partition will not failover correctly but the DOSFAT_C: partition will.
- Driver installation with NetWare 5.0 SP6A: Do not load cpmpmk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
- Driver Version 6.51a.
- Symmetrix 8000 Series: 66/67 support at NetWare 4.11, 5.x, 5568 support at Netware 5.1.
- Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Driver Version v6.51a.
- Symmetrix 8000 Series: 66/67 support at NetWare 5.x, 5568 support at Netware 5.1.
- Novell 5.00 OS only supports the Host Adapter Module (HAM) driver.
- Requires BIOS rev 6.26, available at <http://www.qlogic.com>
- Driver Version 1.27.
- Requires BIOS v2.20.
- Driver for Adaptec available at: <http://www.adaptec.com/worldwide/support/suppyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version v8.1 or higher.
- AHA-2944W is no longer available in distribution channels.**
- PowerPath not currently supported.
- Requires BIOS version 2.02e.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- Driver Version 3.90a7.
- DOS boot device maximum accessible capacity is 2GB. Network SYS volume must be in LUN 0.
- Supports FC-AL point-to-point and Fabric switch configurations.
- Requires HAM driver and BIOS 2.20. The driver is available on the EMC intranet (<http://iqweb.lss.emc.com>).
- EMC engineering recommends that customers do not combine or share a Network SYS volume and data volumes on the same Symmetrix logical device.
- Consult the EMC customer support center for a detailed Netware Symmetrix boot installation procedure.
- Requires SP4 on Netware 5.1.
- Requires "SCAN ALL LUNS" in AUTOEXEC.NCF just before the "Mount All" statement.
- Netware 5.1 SP4 and 6.0 SP1 require BIOS 2.20. Requires "SCAN ALL LUNS" in AUTOEXEC.NCF just before the Mount All statement.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- Requires NWPA.NLM V.3.07A update from Novell website.
- PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
- Requires NetWare patches: NWPAPT2A and NSS5J.
- Qlogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
- Firmware Version 1.34.

- Symmetrix 8000 Series: 66/67 support at NetWare 5.x, 5568 support at Netware 5.1.
- Novell 5.00 OS only supports the Host Adapter Module (HAM) driver.
- Symmetrix 8000 Series: 66/67 support at NetWare 4.11, 5.x, 5568 support at Netware 5.1.
- Maximum number of NWFS volumes that can be mounted is 64.
- Requires BIOS rev 6.26, available at <http://www.qlogic.com>
- Driver Version 1.27.
- Requires BIOS v2.20.
- Driver for Adaptec available at: <http://www.adaptec.com/worldwide/support/suppyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version v8.1 or higher.
- AHA-2944W is no longer available in distribution channels.**
- Driver installation with NetWare 5.0 SP6A: Do not load cpmpmk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
- Driver Version 6.51a.
- Edit config.sys with the following: Files=100 Buffers=99
- When installing NetWare for fabric boot (when operating system is not installed in the local host) on the Symmetrix, create only one LUN and then perform the install. To install a second server that will be fabric boot, repeat the process by creating one additional LUN and then loading the operating system to it. Continue this process until the desired number of fabric boot servers have been reached. Conditions exist where several LUNs are initially created and you perform your first install, NetWare will sometimes acquire and stripe the operating system across several of the newly created LUNs.
- To enable failover with fabric boot DOSFAT.NSS must be loaded from the autoexec.ncf. In a failed condition the c:\ partition will not failover correctly but the DOSFAT_C: partition will.
- NetWare boot support is contingent on migration of the DOS boot partition to an NSS partition. NetWare will warn you of the possibility of data corruption if you convert the DOS boot partition to an NSS partition. The risk of data corruption is during I/O to the C: drive while in the NetWare debugger, or while writing reboot log files during an "Auto Restart After Abend". When you load DOSFAT, please set "Auto Restart After Abend" to 0 to avoid the possibility of data corruption.
- Must use standard PCI 32bit/33MHz slot for SCSI
- Netware 5.1 SP4 and 6.0 SP1 require BIOS 2.20. Requires "SCAN ALL LUNS" in AUTOEXEC.NCF just before the Mount All statement.
- DOS boot device maximum accessible capacity is 2GB. Netware SYS volume must be in LUN 0.
- Requires HAM driver and BIOS 2.20. The driver is available on the EMC intranet (<http://iqweb.lss.emc.com>).
- EMC engineering recommends that customers do not combine or share a Netware SYS volume and data volumes on the same Symmetrix logical device.
- Consult the EMC customer support center for a detailed Netware Symmetrix boot installation procedure.
- Requires SP4 on Netware 5.1.
- Requires "SCAN ALL LUNS" in AUTOEXEC.NCF just before the "Mount All" statement.
- (Adaptec AHA-2944UW)
- Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.**
- Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- Driver Version v6.51a.
- PowerPath not currently supported.
- Requires BIOS version 2.02e.
- Driver Version 3.90a7.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
- Requires NWPA.NLM V.3.07A update from Novell website.
- Supports FC-AL point-to-point only.
- Requires HBA firmware revision 1.83, available at <http://www.qlogic.com>**
- Requires SP4 or higher for NetWare 5.00.**
- QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
- Firmware Version 1.34.

- Novell 5.00 OS only supports the Host Adapter Module (HAM) driver.
- Symmetrix 8000 Series: 66/67 support at NetWare 4.11, 5.x, 5568 support at Netware 5.1.
- Maximum number of NWFS volumes that can be mounted is 64.
- Requires BIOS v2.20.
- Driver for Adaptec available at: <http://www.adaptec.com/worldwide/support/suppyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
- Requires Legacy PCI slot (not available on most new servers.)**
- Driver Version v8.1 or higher.
- (Adaptec AHA-2944UW)
- Netware 5.1 SP4 and 6.0 SP1 require BIOS 2.20. Requires "SCAN ALL LUNS" in AUTOEXEC.NCF just before the Mount All statement.
- AHA-2944W is no longer available in distribution channels.**
- Requires BIOS rev 6.26, available at <http://www.qlogic.com>
- Driver Version 1.27.
- Supports FC-AL point-to-point only.
- When installing NetWare for fabric boot (when operating system is not installed in the local host) on the Symmetrix, create only one LUN and then perform the install. To install a second server that will be fabric boot, repeat the process by creating one additional LUN and then loading the operating system to it. Continue this process until the desired number of fabric boot servers have been reached. Conditions exist where several LUNs are initially created and you perform your first install, NetWare will sometimes acquire and stripe the operating system across several of the newly created LUNs.
- NetWare boot support is contingent on migration of the DOS boot partition to an NSS partition. NetWare will warn you of the possibility of data corruption if you convert the DOS boot partition to an NSS partition. The risk of data corruption is during I/O to the C: drive while in the NetWare debugger, or while writing reboot log files during an "Auto Restart After Abend". When you load DOSFAT, please set "Auto Restart After Abend" to 0 to avoid the possibility of data corruption.
- Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.**
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- Includes both Pentium PRO and XEON models
- Edit config.sys with the following: Files=100 Buffers=99
- To enable failover with fabric boot DOSFAT.NSS must be loaded from the autoexec.ncf. In a failed condition the c:\ partition will not failover correctly but the DOSFAT_C: partition will.
- Driver installation with NetWare 5.0 SP6A: Do not load cpqmpk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
- Driver Version 6.51a.
- Symmetrix 8000 Series: 66/67 support at NetWare 5.x, 5568 support at Netware 5.1.
- (HHBA-5101BK-01)
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Driver Version 2.00E or higher. Requires NetWare 5.1 support pack 3 or higher.
- Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- Driver Version v6.51a.
- Requires NetWare patches: NWPAPT2A and NSS5J.
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- PowerPath not currently supported.
- Requires BIOS version 2.02e.
- Driver Version 3.90a7.
- DOS boot device maximum accessible capacity is 2GB. Netware SYS volume must be in LUN 0.
- Requires HAM driver and BIOS 2.20. The driver is available on the EMC intranet (<http://iqweb.lss.emc.com>).
- EMC engineering recommends that customers do not combine or share a Netware SYS volume and data volumes on the same Symmetrix logical device.
- Consult the EMC customer support center for a detailed Netware Symmetrix boot installation procedure.
- Requires SP4 on Netware 5.1.
- Requires "SCAN ALL LUNS" in AUTOEXEC.NCF just before the "Mount All" statement.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- Requires NWPANLM V.3.07A update from Novell website.
- PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
- HP NetServer LC2000 is only supported with two processors.Uni-Processor configurations are not supported
- QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
- Firmware Version 1.34.

- Maximum number of NWFS volumes that can be mounted is 64.
- Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- Driver Version 6.51a.
- Driver installation with NetWare 5.0 SP6A: Do not load cpqmpk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
- Symmetrix 8000 Series: 66/67 support at NetWare 4.11, 5.x, 5568 support at Netware 5.1.
- Requires NetWare patches: NWPAPT2A and NSS5J.
- Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Driver Version v6.51a.
- PowerPath not currently supported.
- Requires BIOS version 2.02e.
- Driver Version 3.90a7.
- Requires BIOS v2.20.
- Driver for Adaptec available at: <http://www.adaptec.com/worldwide/support/suppyproduct.html?cat=/Technology/SCSI+Host+Adapters&fromPage=driverindex>
- Requires Legacy PCI slot (not available on most new servers.)
- Netware 5.1 SP4 and 6.0 SP1 require BIOS 2.20. Requires "SCAN ALL LUNS" in AUTOEXEC.NCF just before the Mount All statement.
- Driver Version v8.1 or higher.
- AHA-2944W is no longer available in distribution channels.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
- Novell 5.00 OS only supports the Host Adapter Module (HAM) driver.
- Requires NWPA.NLM V.3.07A update from Novell website.
- Driver Version 1.27.
- Requires BIOS rev 6.26, available at <http://www.qlogic.com>
- HPQ Proliant servers with ATF and Powerpath requires use of SCSIHD in place of CPQSHD.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- This HBA is equivalent to the qLogic QLA2310.
- Requires BIOS 1.34 available from QLogic at <http://www.qlogic.com>.
- Driver Version 6.50v.
- This HBA is equivalent to the qLogic QLA2340.
- QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.
- Firmware Version 1.34.

1. The kernel version listed is included in the corresponding standard distributed release.

2. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.

3. Supported with QLogic driver v6.05.00.

4. Host must be offline for interfamily Symmetrix microcode upgrade.

5. BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
6. Driver Version v6.05.00.
7. Driver Version v6.x series. Supports persistent binding and only supports Class 3.
8. This kernel is limited to 110 devices, not 128.
9. Install with driver provided by RedHat 7.2 Installer and upgrade to the EMC-approved driver after installation.
10. Requires QLogic driver 4.47.18 and BIOS 1.83.
11. PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
12. Requires QLogic driver 4.47.18 driver disk, dd.img-i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
13. This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath.
14. Booting from EMC storage arrays is NOT supported with PowerPath.
15. Linux v2.4.x Kernels support a maximum of 128 devices per system.
16. When used with the HP NetServer LC2000: 32 device maximum.
17. If using Dell PERC Controller, requires PERC 3 with OpenManager 3.0 and Array Manager 3.1. The afamgt.sys must be version 2.6.0.3486 (or above).
18. Single HBA zoning is required regardless of the switch being utilized.
19. 8 LUNs supported; 2-node AL connection only.
20. An RPM from Dell may be used to install the QLogic v6.05.00 driver and may be obtained from the QLogic website at http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
21. This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
22. Driver Version v6.04.01.
23. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
24. **QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
25. Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
26. Only one HBA is qualified for use in the Linux host when booting from the CLARiiON via fabric.
27. Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
28. Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
29. No MirrorView or SnapView used on boot LUNs.
30. EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
31. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
32. Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
33. For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
34. FCode value 1.63a2.
35. Driver Version 1.23a.
36. **QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
37. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
38. Emulex driver and BIOS available from <http://www.emulex.com>.
39. FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
40. The LP9002-E now ships with the LP9002L-E low profile adapter.
41. FCode value 1.63a.
42. Firmware Version 3.90a7.
43. Firmware Version 1.80a2.
44. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
45. Firmware Version v3.90a7.
46. Driver Version v1.22e.
47. Firmware Version 1.02a0.
48. **QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
49. Firmware Version 1.80a3.
50. Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.

- The kernel version listed is included in the corresponding standard distributed release.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPO.
- Supported with QLogic driver v6.05.00.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- Driver Version v6.x series. Supports persistent binding and only supports Class 3.
- Driver Version v6.05.00.
- Must use standard PCI 32bit/33MHz slot for SCSI
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- Driver Version v6.04.01.
- This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
- Single HBA zoning is required regardless of the switch being utilized.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- Firmware Version 1.01a2.
- FCode value 1.63a2.
- Firmware Version 3.90a7.
- Driver Version 1.23a.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**

- This kernel is limited to 110 devices, not 128.
- Install with driver provided by RedHat 7.2 Installer and upgrade to the EMC-approved driver after installation.
- Requires QLogic driver 4.47.18 and BIOS 1.83.
- The kernel version listed is included in the corresponding standard distributed release.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPK.
- Supported with QLogic driver v6.05.00.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- Driver Version v6.05.00.
- Driver Version v6.x series. Supports persistent binding and only supports Class 3.
- Includes both Pentium PRO and XEON models
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- Requires QLogic driver 4.47.18 driver disk, dd.img–i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath.
- Booting from EMC storage arrays is NOT supported with PowerPath.
- Requires v6.05 or higher Navisphere host agent/CLI.
- This system is supported with Red Hat 2.1 Advanced Server v2.4.9–E.3 and updated with v2.4.9–E.9, E.10, and E.12 RPMs.
- Single HBA zoning is required regardless of the switch being utilized.
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPK.
- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- 8 LUNs supported; 2–node AL connection only.
- This HBA is equivalent to the qLogic QLA2310.
- Driver Version v6.04.02.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- When used with the HP NetServer LC2000: 32 device maximum.
- Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
- Driver Version v6.04.01.
- Only one HBA is qualified for use in the Linux host when booting from the CLARiON via fabric.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group.
- Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- FCode value 1.63a2.
- Driver Version 1.23a.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- The LP9002–E now ships with the LP9002L–E low profile adapter.
- FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- Firmware Version 3.90a7.
- FCode value 1.63a.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
- Firmware Version 1.80a2.
- Firmware Version 1.01a2.
- Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.
- Firmware Version 1.02a0.
- Driver Version v1.22e.
- Firmware Version v3.90a7.
- Requires BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- Firmware Version 1.80a3.

- This kernel is limited to 110 devices, not 128.
- Install with driver provided by RedHat 7.2 Installer and upgrade to the EMC-approved driver after installation.
- Requires QLogic driver 4.47.18 and BIOS 1.83.
- The kernel version listed is included in the corresponding standard distributed release.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Supported with QLogic driver v6.05.00.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- PowerPath v3.02 not supported on this system.
- Driver Version v6.x series. Supports persistent binding and only supports Class 3.
- Driver Version v6.05.00.
- This system is supported with Red Hat 2.1 Advanced Server v2.4.9–E.3 and updated with v2.4.9–E.9, E.10, and E.12 RPMs.
- PowerPath v3.0.2 b069 is not supported on this system.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- Requires QLogic driver 4.47.18 driver disk, dd.img–i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- This HBA is equivalent to the qLogic QLA2310.
- Driver Version v6.04.02.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- This HBA is equivalent to the qLogic QLA2340.
- Requires v6.05 or higher Navisphere host agent/CLI.
- Only one HBA is qualified for use in the Linux host when booting from the CLARiiON via fabric.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- Driver Version v6.04.01.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Single HBA zoning is required regardless of the switch being utilized.
- This server only supports 5 Volt HBAs: qLogic 22XX family, qLogic 23XX family, Emulex LP8000, and Emulex LP850
- FCCode value 1.63a2.
- FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
- Driver Version 1.23a.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- Emulex driver and BIOS available from <http://www.emulex.com>.

43. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
44. FCode value 1.63a.
45. Firmware Version 3.90a7.
46. Linux v2.4.x Kernels support a maximum of 128 devices per system.
47. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
48. Firmware Version 1.80a2.
49. Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.
50. **Due to the HS20's embedded FC-SW design, EMC Access Logix is required to assign LUNS to each individual blade server.**
51. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.

52. **Supports IBM BIOS 1.34. Available at <http://www.qlogic.com>.**
53. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
54. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
55. Driver Version 6.04.01.
56. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
57. Driver Version v1.22e.
58. Firmware Version v3.90a7.
59. **Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
60. **Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**
61. **QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
62. Firmware Version 1.02a0.
63. Firmware Version 1.80a3.
64. Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.

- This kernel is limited to 110 devices, not 128.
- Install with driver provided by RedHat 7.2 Installer and upgrade to the EMC–approved driver after installation.
- Requires QLogic driver 4.47.18 and BIOS 1.83.
- The kernel version listed is included in the corresponding standard distributed release.
- Supported with QLogic driver v6.05.00.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RQP.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- Driver Version v6.05.00.
- Driver Version v6.x series. Supports persistent binding and only supports Class 3.
- Requires QLogic driver 4.47.18 driver disk, dd.img–i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath.
- Bootting from EMC storage arrays is NOT supported with PowerPath.
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Driver Version v6.04.01.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- Only one HBA is qualified for use in the Linux host when booting from the CLARiON via fabric.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Access Logic required, direct connect or fabric, (no booting through switch inter–switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- Single HBA zoning is required regardless of the switch being utilized.
- FCCode value 1.63a2.
- Driver Version 1.23a.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- FC–AL and FC–SW can run concurrently on separate HBAs on the same Host.
- The LP9002–E now ships with the LP9002L–E low profile adapter.
- Firmware Version 3.90a7.
- FCCode value 1.63a.
- Firmware Version 1.80a2.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- When used with the HP NetServer LC2000: 32 device maximum.
- Driver Version v1.22e.
- Firmware Version v3.90a7.
- Firmware Version 1.02a0.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- Firmware Version 1.80a3.
- Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.**
- Supports Stratus OS 2.0.X through 2.1.X.**
- Supports Stratus OS 1.3.X through 2.1.X.**
- Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.**

10. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
11. **Single HBA zoning is required regardless of the switch being utilized.**
12. **FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.**
13. Firmware Version 1.80a2.

50	Origin 3000 ³	PCI	SGI IRIX: 6.5.12 ² , 6.5.13 ² , 6.5.14 ² , 6.5.15 ²	SGI PCI–SCSI–U3–2P	U2 LVD ⁹	N	

1. Challenge not supported by SGI as part of SGI–ware program.

2. Symmetrix 8000 Series: 66/67 support at IRIX 6.5.10, 5568 support at IRIX 6.5.13 except for Challenge series.

3. I/Os will immediately fail if a device becomes not ready. This is an SGI bug.

4. I/Os will fail if a SCSI cable is temporarily disconnected.

5. Requires SGI patch set 10/1/98.

6. Requires copper to optical MIA. Contact Methode Electronics at 800–323–6858 (P/N MDB–9–6–1) or Gadzoox Microsystems at 410–838–2108 (P/N MDM1063TC–G).

7. SGI has replaced this adapter with the QLogic 2200 card. New installs should order part number PCI–FC–1P–OPT–A for PCI, or XT–FC–1P–OPT–A for XIO from SGI. This adapter does not require a copper to optical MIA.

8. FC–AL supports 128 LUNs per adapter. LUN skipping is permitted, however, LUN 0 must exist for each adapter.

9. SCSI supports targets 1–15, LUNs 0–7. LUN skipping is permitted, however, LUN 0 must exist for each target.

12	PowerEdge: 2600, 2650, 4600, 6600, 6650	PCI-X	SuSE Linux SLES 8 SP2a (v2.4.19–SuSE.304) ^{2, 3}	QLogic QLA2200F–EMC ^{5, 7, 8, 9}	FC–AL, FC–SW	N	

- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiiON–attached hosts available from ftp://ftp.emc.com/pub/elab/linux.
- Single HBA zoning is required regardless of the switch being utilized.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS 1.34 available from <http://www.qlogic.com>.**
- Host must be offline for interfamily Symmetrix microcode upgrade.
- Driver Version 6.05.00.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.**
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- Requires BIOS 1.34 available from QLogic at <http://www.qlogic.com>.**
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.**
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.**
- Emulex driver and BIOS available from <http://www.emulex.com>.**
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- Driver Version 1.23a.
- Firmware Version 1.01a2.
- FCode value 1.63a2.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- Firmware Version 1.80a3.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.**
- Access Logic required, direct connect or fabric, (no booting through switch inter–switch links)**
- No MirrorView or SnapView used on boot LUNs.**
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.**
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.**
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.**
- An RPM from Dell may be used to install the QLogic v6.05.00 driver and may be obtained from the QLogic website at http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- Firmware Version 3.90a7.

- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiiON–attached hosts available from [ftp://ftp.emc.com/pub/elab/linux](http://ftp.emc.com/pub/elab/linux).
- Driver Version 6.05.00.
- Compaq servers that are rack–mountable (designated by Compaq with an "R") are supported.
- Single HBA zoning is required regardless of the switch being utilized.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS 1.34 available from <http://www.qlogic.com>.**
- Host must be offline for interfamily Symmetrix microcode upgrade.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.**
- Includes both Pentium PRO and XEON models
- HPQ Proliant servers that are rack–mountable (designated with an "R") are supported.
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32–bit, this shielding prohibits 64–bit HBAs from properly seating in the PCI slots. To accommodate 64–bit HBAs, this shielding must be removed, or modified to allow the 64–bit HBA to fully seat in the 32–bit slots.
- Requires BIOS 1.34 available from QLogic at <http://www.qlogic.com>.**
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Dual port PCI–X fibre channel mezzanine card option is embedded. No PCI/PCI–X slots available.
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.**
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.**
- Emulex driver and BIOS available from <http://www.emulex.com>.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- Driver Version 1.23a.
- FCode value 1.63a2.
- Firmware Version 1.01a2.
- Firmware Version 1.80a3.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.**
- Access Logic required, direct connect or fabric, (no booting through switch inter–switch links)**
- No MirrorView or SnapView used on boot LUNs.**
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.**
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.**
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.**
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.**
- Firmware Version 3.90a7.

- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiON-attached hosts available from <http://ftp.emc.com/pub/elab/linux>.
- Driver Version 6.05.00.
- Single HBA zoning is required regardless of the switch being utilized.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- Requires BIOS 1.34 available from <http://www.qlogic.com>.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.

10. This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
11. **Requires BIOS 1.34 available from Qlogic at <http://www.qlogic.com>.**
12. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
13. Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.
14. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
15. **Due to the HS20's embedded FC-SW design, EMC Access Logix is required to assign LUNS to each individual blade server.**
16. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.

17. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
18. **Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
19. **Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**
20. **FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.**
21. **The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.**
22. **Emulex driver and BIOS available from <http://www.emulex.com>.**
23. **QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
24. Driver Version 1.23a.
25. Firmware Version 1.01a2.
26. FCode value 1.63a2.
27. Firmware Version 1.80a3.
28. **QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
29. **Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.**
30. **Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)**
31. **No MirrorView or SnapView used on boot LUNs.**
32. **EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.**
33. **Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.**
34. **For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.**
35. **This system is supported with Red Hat 2.1 Advanced Server v2.4.9-E.3 and updated with v2.4.9-E.9, E.10, and E.12 RPMs.**
36. **PowerPath v3.0.2 b069 is not supported on this system.**
37. **PowerPath v3.02 not supported on this system.**
38. **Firmware Version 3.90a7.**

38	Ultra Enterprise 10000	SBUS	Sun Solaris: 2.6 ³ , 7 ⁴ , 8 ⁵	Sun X1065A (DWIS)	UWD	Y ²	

1. The X1065A adapter is compatible with all FWD directors. scsi_options=0x7F8

2. Scsi_options=0x7F8

3. EMC required Sun patches for Solaris 2.6:

105181-35 SunOS 5.6: kernel update patch

105356-23 SunOS 5.6: /kernel/drv/ssd and /kernel/drv/sd patch.

105580-19 SunOS 5.6: /kernel/drv/glm patch (for X6541 HBA only).

4. EMC required Sun patches for Solaris 7:

106541-28 SunOS 5.7: kernel update patch.

106924-11 SunOS 5.7: /kernel/drv/isp and /kernel/drv/sparcv9/isp patch (for X1062A and X1065A HBAs only).

106925-09 SunOS 5.7: glm driver patch (for X5641A HBA only).

5. EMC required Sun patches for Solaris 8:

108528-26 SunOS 5.8: kernel update patch.

108974-36 SunOS 5.8: data, uata, dad, sd, and scsi patch.

109657-09 SunOS 5.8: isp driver patch (for X1062A and X1065A HBAs only).

109885-14 SunOS 5.8: glm driver patch (for X6541A HBA only).

6. FCode value 13.5.7.

7. Requires HBA Rev H.

8. For JNi HBAs FC-1063-EMC, FC64-1063-EMC, and FCI-1063-EMC, Tachyon driver 2.6.10 must be used with VxVM versions 3.1.1 or earlier.

9. Driver Version 2.6.13.

10. For FC-AL hub connection not supported for boot device.
11. Mixing FC-SW and FC-AL on the same host using JNI HBAs is not supported.
12. Requires HBA Rev B, C, D, E, G, H and J.
13. Driver Version 4.1.5. If PowerPath is installed, minimum revision of 3.0.4 is required. Supports SNIA HBA API.
14. FCode value 3.9.
15. Requires N-bit for PCI SCSI interface to support PowerPath.
16. Disconnecting and reconnecting the SCSI cable on an active system will reduce I/O transfer rate due to negotiation issues. Host is not capable of WDTR after link recovery.
17. This host supports only 5 V HBAs.
18. 64-bit HBAs will not fit into the 32-bit slot due to a physical obstruction.
19. **For 'UltraEnterprise' servers with PCI I/O board, only the left slot can be utilized due to physical constraints of the Sun PCI/SCSI adapter.**
20. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
21. Driver Version 5.02b.
22. Firmware Version 3.91a3.
23. FCode value 1.40a0.
24. Driver Version 4.13. Fcode should be loaded on all HBA's at the time of installation. All drivers and fcode can be downloaded from <http://www.qlogic.com>. Supports SNIA HBA API.
25. FCode value 2.00.06. Fcode should be loaded on all HBA's at the time of installation. All drivers and fcode can be downloaded from <http://www.qlogic.com>. Supports SNIA HBA API.
26. Sun's QLogic cards are not supported due to proprietary drivers, fcode and firmware. Please see http://www.sun.com/service/servicelist/us/detail_ww_ss_hba.html
27. Supports Dynamic Reconfiguration for Sun Fire 4800 and 6800 only. Minimum Solaris 8 recommended patch bundle 108528-21. Requires system controller firmware patch 112127-02 or higher.
28. Firmware Version 3.90a7.
29. FCode value 2.00.01. Fcode should be loaded on all HBA's at the time of installation. All drivers and fcode can be downloaded from <http://www.qlogic.com>. Supports SNIA HBA API.
30. Driver Version 5.2.1. Supports SNIA HBA API.
31. Supports DR on Sun 12K and 15K.
32. Driver Version 5.2.1.
33. **EMC required Sun patches for Solaris 9:**
112233-08 Sun OS 5.9: kernel patch
112834-03 Sun OS 5.9: patch SCSI
113277-17 Sun OS 5.9: sd and ssd patch
34. Firmware Version 1.01A2. Driver and firmware available at <http://www.emulex.com>. Supports SNIA HBA API.
35. **Use of the LP9002DC or QLA2342 requires FCO A0218-1 from Sun for HBA's to operate in 66mhz mode. Without this FCO the HBA's will only come up in 33mhz mode which could have an impact on performance.**
36. Firmware Version 1.80a2.
37. **Must add "ssd:ssd_max_throttle=20" in /etc/system for Clariion or Symmetrix attach.**
Must add "forceload drv/ssd" in the /etc/system when these HBA's are installed for Clariion or Symmetrix attach with PowerPath. Do not include the quotes on either entry.
MpxIO is not currently supported with EMC storage
38. Driver Version SAN 4.2.
39. Firmware Version 1.14.01.
40. **Requires RPQ**

1. Channel code 20.018
2. Firmware Version 20.032.
3. Fibre Short Wave
4. Fibre Copper
5. Fibre Long Wave
6. Connected through switch, hub or direct connect.
7. Hi Perform Short Wave
8. Hi Perform Fibre Copper
9. Hi Perform Long Wave
10. Firmware Version 20.026.
11. Hardware and adapters similar to Unisys ES7000–100, ES7000–200.
12. The Libra 18x includes native MCP, and Virtual Machine for MCP (Windows MCPvm) partitions
13. The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
14. Multipath VSS requires Virtual Machine for Clearpath MCP Version 4.0 SR1 with PowerPath 3.0.0 B83 or higher and hardware Plateau 10.3 IC003.
15. Firmware Version 01.016.

1. EMC software will function on neither the VMkernel nor the VMs as the currently–released versions of the SymAPI do not include support for VMware ESX.
2. Windows 2000 SP3 and SP4 are qualified to run as Virtual Machines.
3. Supported with VMFS.
4. Path failover and load–balancing are not supported.
5. Supported with QLogic driver v6.03.00b6 included in the VMware ESX v1.5.2 kernel and BIOS v1.34.
6. Windows 2000 SP3 and SP4, Windows NT 4.0, and RHEL 2.1 ES/AS are qualified to run as Virtual Machines.
7. Supported with QLogic driver v6.04.00–emc included in the VMware ESX v1.5.2 patch 3 release and BIOS v1.34.
8. Supported with QLogic driver v6.04.00–emc included in the VMware ESX v1.5.2 patch 4 release and BIOS v1.34.
9. Supported with QLogic driver v6.04.00–emc included in the VMware ESX v1.5.2 patch 5 release and BIOS v1.34.
10. Windows 2000 SP4, Windows 2003, and RHEL 2.1 ES/AS are qualified to run as Virtual Machines.
11. PowerPath is not supported on VMware ESX v2.0.1. However, the native VMware ESX v2.0.1 path failover is supported on Symmetrix 8000 and DMX.
12. Supported with QLogic driver v6.04.02 included in the VMware ESX v2.0.1 release and BIOS v1.34.

- Patches required (must be obtained from Fujitsu): 910697-01, 910714-01, 910708-11, 910734-01.
- Additional Fujitsu Safe Series software qualified in the high availability cluster environment, and associated patch requirement (must be obtained from Fujitsu): Fujitsu SafeFile 1.2: 910738-05 Fujitsu SafeFile 1.3 910879-04 Fujitsu SafeDisk 1.2.1: 910721-06. Note: Fujitsu SafeDisk software should not be used for mirroring Symmetrix devices. Fujitsu SafeLink 2.0: 910743-07, 910766-03
- SafeCluster 2.0 requires patch 910910-05 and 110916-03 for Solaris 8. Patches required (must be obtained from Fujitsu).
- Additional Fujitsu Safe Series software qualified in the high availability cluster environment, and associated patch requirement (must be obtained from Fujitsu): Fujitsu SafeFile 1.3 910879-04, Fujitsu SafeFile 1.3.1 911353-02, Fujitsu SafeDisk/Global 2.0 910920-05, Fujitsu SafeDisk/Global 2.1 911418-02, Fujitsu SafeDisk 2.0 910926-05, Fujitsu SafeLink 2.0 910743-07, 910766-03
- Disconnecting and reconnecting the SCSI cable on an active system will reduce I/O transfer rate due to negotiation issues. Host is not capable of WDTR after link recovery.
- Requires N-bit for PCI SCSI interface.
- Patches required (must be obtained from Fujitsu): 910389-02, 910426-02, 910465-01, 910709-07.
- Additional Fujitsu Safe Series software qualified in the high availability cluster environment, and associated patch requirement (must be obtained from Fujitsu): Fujitsu SafeFile 1.1: 910232-18 Fujitsu SafeDisk 1.1: 910315-08, 910432-01. Note: Fujitsu SafeDisk software should not be used for mirroring Symmetrix devices.
- For use in Asia Pacific/Japan only. Refer to Fujitsu Siemens Base Connectivity information for US/Europe.
- The PRIMECLUSTER V4.0 family of software products consists of the following components: Reliant Monitor Services RMS 4.0A, Cluster Foundation CF 4.0A, Wizard Tools WT 4.0A and Application Wizards AW, Scalable Internet Services SIS 4.0A, Parallel Application Services PAS 4.0A, Global File Services GFS 4.0, Global Disk Services GDS 4.0, Global Link Services GLS 4.0
- GDS requires Fujitsu PCL Fibre Channel driver PFCA2.2.1.
- PRIMECLUSTER 4.1A10 is required with Solaris 9. Solaris 9 requires patch 112902-11 with PRIMECLUSTER 4.1A10
- PRIMECLUSTER 4.1A10 requires patch 901110-03 for Solaris 8, or 901111-03 for Solaris 9.

1. Y-Cables Not Supported
2. Multi-port SCSI.
3. PowerPath is not supported on any RM400C or RM400E model. DRAID is supported on Reliant UNIX 5.43.C20 and above.
4. EMC recommends that HBAs of different vendors not be used in the same host server.
5. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
6. V5.45A30 OS and higher supports upto 4096 LUNs. FC switch support starts with Reliant UNIX V5.45A20 and higher.
7. Symmetrix 8000 Series: 66/67 support: Reliant UNIX 5.44.5.45 Solaris 2.6, 7, 8 or 9. Symmetrix 8000 Series:5568 support: Solaris 8,9.
8. Fast-Wide SCSI is a default setting. Ultra-Wide can be enabled through software. Refer to the latest Symmetrix Open Systems Environment Product Guide, P/N 200-999-563.
9. PowerPath support requires version 1.5.0.f1c2 with patch 1.5.0.3.Patch.B09 and patch 1.5.0.5.Patch.B13. Also supports PowerPath v2.0, 2.1.

- Also supports Fujitsu Technology Solutions Inc.
- FSC requires all patches for Solaris 7 be obtained through FSC in the form of a Solaris 7 PTF patch CD. The current patch CD is Solaris 7 PTF R03111.
- The PRIMECLUSTER V3.0 family of software products consists of: Cluster Foundation (CF) 1.5, Reliant Monitor Services (RMS) 3.1, Scalable Internet Services (SIS) 2.5, Parallel Application Services (PAS) 1.0, Wizard Tools WT 3.3.
- Symmetrix 8000 Series: 66/67 support: Reliant UNIX 5.44, 5.45 Solaris 2.6, 7, 8 or 9. Symmetrix 8000 Series: 5568 support: Solaris 8, 9.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- 5-64 nodes on special release available via RPQ.
- For use in US/Europe only. Refer to Fujitsu Base Connectivity information for Asia Pacific/Japan.
- The PRIMECLUSTER V4.0 family of software products consists of the following components: Reliant Monitor Services RMS 4.0A, Cluster Foundation CF 4.0A, Wizard Tools WT 4.0A and Application Wizards AW, Scalable Internet Services SIS 4.0A, Parallel Application Services PAS 4.0A, Global File Services GFS 4.0, Global Disk Services GDS 4.0, Global Link Services GLS 4.0
- GAB disks (membership and service group heartbeat disks) are not supported.
- For configurations with PowerPath 3.0.1 use native names only, and no power devices.
- Veritas MP1 is required for clusters with more than 2 servers
- Symmetrix SCSI-3 "PER" volume flag setting required for devices accessible through two or more paths.
- SRDF and/or Timefinder by RPQ only
- If all FC connectivity to the array is lost (without a server shutdown), then after connectivity is restored, the user must execute a vxctl enable command, before the VCS Oracle 9iRAC service group is brought back online.
- Requires Symmetrix 8000 Series, PowerPath 3.0.4 or later, VxVM 3.5 or later or Solstice Disk Suite (SDS) 4.2.1. Supported with Microcode 5568.52.18 5567 code revisions supported are 5567.46.24 or 5567.53.30. 5567.53.30 requires the PGR Phase 4 E-pack. Symmetrix "PER" volume flag for Persistent Reservation support for devices accessible through more than two paths.
- Requires Symmetrix 8000 Series and minimum microcode of (5567.50.28 or later) or (5568.54.20 or later).
- GDS requires Fujitsu PCL Fibre Channel driver PFCA2.2.1.

- For HP–UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange –r N /dev/vg01/lvol1 or lvcreate –r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror–UX, then this flag should not be set.
- On HP–UX 11.00 LVM support only – no VxVM
- Refer to MC/Service Guard Release Notes at www.docs.hp.com for patch requirements.
- Can mix HP–UX 11.00 and HP–UX 11i in same cluster, all nodes must be MC/SG 11.09, 11.13 or later.
- Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
- A4800A and A5159A HBAs are both capable of Ultra 1 speeds, but ship from HP with a default setting of FWD. Symmetrix is supported at Ultra 1 speeds with both these HBAs. Ultra 1 can be enabled in the V–Class, N–Class, and L–Class, A–Class and Superdome PDC firmware. V–Class supports the A4800A Only.

- HP e3000 MPE SYSTEMS – The above note applies but only includes the A–Class and N–Class Servers. The HP e3000 A–Class does not support the dual port HBA A5159A.
- PDC firmware: V2200, 2250: Arbitrated loop and fabric, use TSSW 5.3 or higher. V2500, 2600: Arbitrated loop, use TSSW 3.1 or higher. Fabric, use TSSW 3.2 or higher.
 - Volume Managers Supported: LVM
 - Minimum OS version is HP–UX 11.0 990P.
 - Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3–U2SD4L).
 - Number of nodes supported is dependent upon LVM, SLVM, VxVM, and CVM. Refer to EMC Host Connectivity Guide for HP–UX.
 - HP–UX 11i supported with MC/Service Guard 11.09 only.
 - LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5x66.26.19s.
 - HP–UX 11.0 and 11i: 64–bit only. Oracle RAC9i (9.0.1, 9.2). PowerPath 2.1.x and 3.0 Support. A SAN implementation with ISLs will observe significant delay in failover times if link failures non–contiguous to host HBA occur.
 - PA–8700 processors: Initial support with HP–UX 11.0 Sept 2001, HP–UX 11i Sept 2001.
 - Virtual Partitions (VPAR) is supported on the L–class/rp5470 server. VPAR supported only with HP–UX 11i v1.0 (HP–UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 41.02 or later.
 - rp5405, rp5430, rp5470, rp7400: (PA–8700 processors): Initial support with HP–UX 11.0 Sept 2001, 11i Sept 2001. Symmetrix microcode supported: 5266.40.28 or higher. 5566.41.28 or higher. 5267.27.19 or higher. 5567.34.19 or higher.
 - For driver versions refer to Base Connectivity Section
 - Virtual Partitions (VPAR) is supported on the SuperDome server with 4.x and 5.x Symmetrix models and DMX series. VPAR supported only with HP–UX 11i v1.0 (HP–UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.02.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 36.1 or later.
 - For driver versions, see Hewlett–Packard Base Connectivity table
 - Virtual Partitions (VPAR) is supported on the N–class/rp7400 server with 4.x and 5.x Symmetrix models. VPAR supported only with HP–UX 11i v1.0 (HP–UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later.
 - GAB disks (membership and service group heartbeat disks) are not supported.
 - VCS supported with LVM only
 - Symmetrix microcode supported: 5266.40.28 or higher, 5566.41.28 or higher, 5267.27.19 or higher, 5567.34.19 or higher.
 - Volume Managers Supported: LVM, VxVM 3.2
 - HP A5158A FC–SW is enabled in the March 2000 HWCR bundle XSWHWCR1100.48. Additional patches may be required for support.
 - VPAR supported only with HP–UX 11i v1.0 (HP–UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later. Please refer to the MC/Service Guard Release Notice for patch requirements.
 - rp8400 requires minimum PDC firmware 13.10 or higher.
 - Virtual Partitions (VPAR) is supported on the rp8400 server with 4.x and 5.x Symmetrix models and DMX Series. VPAR supported only with HP–UX 11i v1.0 (HP–UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, system firmware 4.0 or later, PDC firmware 16.009 or later.
 - Minimum OS revision is HP–UX 11.0 990P.
 - Volume Managers Supported: LVM, SLVM
 - T600 only
 - Volume Managers Supported: LVM, SLVM, VxVM 3.2
 - MC/Service Guard 11.13 and 11.14 LVM only.
 - D, R Class only
 - Initial support for fabric is enabled with: fabric device driver version B.11.00.03; minimum operating system level HP/UX 11.0 990P with March 2000 HW–CR bundle and dependency patch PHKL_21381; Symmetrix microcode versions 5265.49.31, 5266.20, 5566.22. Please refer to the Base Connectivity section for the latest driver and OS support.
 - VCS supported with LVM or VxVM and PowerPath. Refer to Table HP single section for supported versions.
 - As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add–on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)
L2000 (product number A5191A)
N4000 Revision A (product number A3639A)
N4000 Revision B (product number A3639B)

40. Volume Managers Supported: LVM, SLVM, VxVM 3.2, VxVM 3.5
41. Volume Managers Supported: LVM, VxVM 3.2, VxVM 3.5
42. LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5567.46.24 or 5568.58.12
43. Virtual Partitions (VPAR) is supported on the N-class/rp7400 server with 4.x and 5.x Symmetrix models and DMX series. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later.
44. Virtual Partitions (VPAR) is supported on the N-class/rp7400 server with 4.x and 5.x Symmetrix models. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later. Powerpath support on Virtual Partitions has to be RPQ'ed at this time.
45. LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5567.46.24, 5568.58.12 or 5x69
46. Review the single attach table for supported PowerPath versions and volume manager restrictions.
47. Symmetrix 8000 Series & 66/67 support: HP-UX 11.0, 11.0 ACE, 11.i. MPE/iX 6.0, 6.5, 6.5.02, 7.0, 7.0.01: Symmetrix 8000 Series 5568 support: HP-UX 11.0, 11i. MPE/iX 6.0, 6.5, 6.5.02, 7.0, 7.0.01
48. These qualified HBAs for EMC Symmetrix storage in the HP9000 server model and the HP-UX revision installed may co-exist in that same server or the same hard partition. Other supported HBAs not used to attach to the Symmetrix may also co-exist on the same server unless specified by EMC and/or HP.
49. rp5405, rp5430, rp5470, rp7400: (PA-8700 processors): Initial support with HP-UX 11.0 Sept 2001, 11i Sept 2001.
50. **MC/ServiceGuard 11.15 is supported on HP-UX 11i v1.0 and HP-UX 11i v2.0 only**
51. **Minimum microcode revision level 5670.23.25. 5568 and 5669 are on a RPQ basis at this time.**

HPQ MPE/iX HPQ

HPQ – HPQ MPE/iX					
No.	Host System	Operating System	Cluster Software	Max # Nodes	Host Bus Adapter
1	e3000 900 Series	HPQ MPE/iX 7.5 ^{4,5}	HPQ Cluster/iX ¹	HA: 2, OPS: 2, RAC: 2	HPQ 28696A
2	e3000 900 Series	HPQ MPE/iX: 6.5.02, 7.0.01, 7.5 ^{4,5}	HPQ Cluster/iX ¹	HA: 2	HPQ 28696A
3	e3000 A-Class	HPQ MPE/iX 7.0.01	HPQ Cluster/iX ¹	HA: 2	HPQ A4800A ²
4	e3000 N-Class (N4000)	HPQ MPE/iX 7.0.01	HPQ Cluster/iX ¹	HA: 2	HPQ: A4800A ² , A5149A ³ , A5150A ³ , A5159A ²

1. Cluster/iX has the following limitations: Requires operator intervention (it is not fully automated); Does not support the boot volume, only user volumes; Does not support data sharing; Is not supported on mirrored disks (using MPE Mirror/iX).
2. A4800A and A5159A HBAs are both capable of Ultra 1 speeds, but ship from HP with a default setting of FWD. Symmetrix is supported at Ultra 1 speeds with both these HBAs. Ultra 1 can be enabled in the V-Class, N-Class, and L-Class, A-Class and Superdome PDC firmware. V-Class supports the A4800A Only.

- HP e3000 MPE SYSTEMS – The above note applies but only includes the A-Class and N-Class Servers. The HP e3000 A-Class does not support the dual port HBA A5159A.
3. Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
4. Requires Symmetrix microcode:
 - 5266.40.28 or higher
 - 5566.40.27 or higher
 - 5267.25.17 or higher
 - 5567.32.16 or higher
 - 5568.34.14 or higher
5. LDEV1, the boot volume, has no size limit in MPE/iX 7.5. The 4GB limit that existed in previous releases has been eliminated.

34	AlphaServer: SC20 ¹⁰ , SC40 ¹⁰ , SC45 ¹⁰	HPQ Tru64 UNIX V5.1A ^{6, 8, 9}	HPQ TruCluster V5.1A ^{5, 9}		HPQ KGPSA-CA (168794-B21)

1. Tru64 V4.0G latest qualified Patch Kit 4 (T64V40GB22AS0004-20030731).

2. TruCluster V1.6 SCSI requires shared buses with 'Y' cables or HPQ (Compaq) Ultra SCSI hubs DS-DWZZH-03, DS-DWZZH-05. Straight cables used only as interconnects. Cables: 038-001-537 (6M), 038-001-538 (12M), 038-001-539 (20M). Maximum bus length must not exceed 25 meters. Fibre configs require additional zoning for hba-to-hba cluster ping. Refer to EMC Host Connectivity Guide for Tru64 UNIX, P/N 300-000-616, for more details.

3. KZPSA-BB [FWD] has been discontinued by HPQ (Compaq).

4. Tru64 V4.0F BL13 Patch Kit 2 may introduce problems with KZPBA adapters. Tru64 V4.0F latest qualified Patch Kit 8 (DUV40FB22AS0008-20030730).

5. TruCluster V5.x Persistent Reservation support requires minimum 5567.53.30, Symm "PER" Volume flag, minimum V5.1 Patch Kit-0003 (BL17), and "ubyte[0] = 8" in /etc/ldr.dbase EMC entry. Configurations that cannot support Persistent Reservation must set "ubyte[0] = 25" to enable alternate barrier patch and direct access devices.

6. V5.x: 255 LUNs/Symmetrix Fibre director port (LUNs 000-0FE valid) on Symmetrix 8000 Series, requires OVMS director bit setting (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, the LUN 000 array controller device will not be usable by the Tru64 host.

7. Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).

8. Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).

9. AlphaServer SC systems have special Tru64 UNIX operating system and AlphaServer SC System Software requirements.

10. Requires RPQ

11. Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).
 12. AlphaServer GS1280,ES80,ES47: Minimum Tru64 V5.1B with Patch Kit 1 (T64V51BB1AS0001-20021229)

1. Fibre Channel HBAs: DCCG141-0000: LP7000e copper DCCG147-0000: LP8000 copper DCCG148-0000: LP8000 fibre
2. Fibre Channel device driver distributed and supported by Bull.
3. Multi-port SCSI or Common SCSI Bus.
4. MSKG0008-0000 = Brocade® SilkWorm® 2800.
5. Mixed FC-AL and FC-SW are supported on the same server.
6. AIX 5.1 32/64-bit kernel support.
7. Supported in SMP and LPAR mode.

- For all PCI-based hosts only: See http://www-1.ibm.com/servers/eserver/pseries/library/hardware_docs/sa38/380538.pdf for appropriate HBA placement guidelines.
- For IBM AIX 4.3.3: requires Oracle RAC9i (9.0.1), HACMP/ES 4.4.x. PowerPath 2.1 or greater is supported. Symmetrix microcode 5566/5567/5568. A SAN implementation with ISLs will observe significant delay in failover times if link failures non-contiguous to host HBA occur. For IBM AIX 5.1: requires Oracle RAC9i (9.2), HACMP/ES 4.4.x. PowerPath 3.0.1 or greater is supported. Symmetrix microcode 5566/5567/5568. A SAN implementation with ISLs will observe significant delay in failover times if link failures non-contiguous to host HBA occur.
- Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3–U2SD4L).
- HBA and driver available exclusively as EMC Fibre Channel Interface V2.0 for AIX Platforms. Latest PTF package (V2.0.0.3_PTF.tar.Z) can be downloaded from the EMC FTP server at <ftp://ftp.emc.com/pub/elab/aix/EMC-FC-Kit>
- Mixed FC–AL and FC–SW are supported on the same server.
- Requires minimum Symmetrix microcode level 5265.39.25. Requires minimum AIX APAR IY05369. Requires minimum EMC ODM fileset support (4.3.3.0 IBM Fibre Channel interface support for Symmetrix).
- Requires minimum Symmetrix microcode level 5265.48.30. Requires minimum AIX APAR IY08960, IY03872. Requires minimum EMC ODM fileset support (4.3.3.1 IBM Fibre Channel interface support for Symmetrix).
- IBM Native Fibre Channel drivers with feature code 6227 and with feature code 6228 are supported on the same server. Feature 6228 and 6239 are supported on the same server. Mixed FC–AL and FC–SW are supported on the same server. 6227 filesets: devices.pci.dfi1000f7.com, devices.pci.dfi1000f7.diag, devices.pci.dfi1000f9.diag, devices.pci.dfi1000f9.rte; 6239 filesets: devices.pci.dfi1000f7.com, devices.pci.dfi1000f7.diag, devices.pci.dfi1080f9.diag, devices.pci.dfi1080f9.rte
- Requires minimum HACMP IY07313, concurrent resource groups not supported with HACMP 4.3 or 4.3.1; For HACMP 4.4.0 and 4.4.1 concurrent resource groups supported with APAR IY14528. Requires minimum AIX APAR IY08960, IY03872, IY06844. Requires minimum Symmetrix microcode level 5265.48.30.
- RS/6000 nodes only: 8 nodes, RS/6000 SP nodes only: 32 nodes, mix RS/6000 and RS/6000 SP in same cluster: 8 nodes.
- Latest APAR for PSSP 3.1.1 is IY17870.
- Latest APAR for PSSP 2.2 is IY15360.
- Latest APAR for PSSP 2.4 is IY17776.
- Latest APAR for PSSP 3.2 is IY17872.
- Requires minimum EMC ODM fileset support (4.3.3.1 IBM Fibre Channel interface support for Symmetrix). Device driver df1000f9 is distributed by IBM.
- Requires minimum AIX 4.3.3 with maintenance level 08 and adapter firmware 3.82a1. Requires minimum HACMP IY07313. Concurrent resource groups not supported with HACMP 4.3 or 4.3.1; For HACMP 4.4.0 and 4.4.1 concurrent resource groups supported with APAR IY14528. Requires minimum Symmetrix microcode level 5265.48.30.
- The following link provides detailed data for all 9076–SP2 models and feature codes: http://www1.ibmink.ibm.com/cgi-bin/master?request=salesmanual&parms=SMS&xt=NTZH*daEMSRi4n1USenGnN9332&xhi=usa.main%7Csalesmanual%5E&type=D&search=9076&title=T&product=9076
- These feature codes are supported: 2054: Power 3 High Node, 2055: SP expansion I/O, 2056: 375 MHz Power 3 thin node, 2057: 375 MHz Power 3 wide node, 2058: 375 MHz Power 3 high node.
- Requires PowerPath version 2.0.2 or higher.
- RVSD 3.2 supported with IBM 6227/6228 host bus adapter.
- Channel configurations: multi-port SCSI preferred or common SCSI bus.
- For installation with Powerpath Versions 3.0.3 and 3.0.4 see Primus ID EMC69100 which contains additional requirements for support.
- AIX 5.1 supported with 32/64-bit kernel. Requires minimum EMC ODM fileset support 5.0.0.0.
- AIX 5.1 32/64 bit Kernel supported. Minimum PowerPath Version 2.1.2 supported. Requires minimum EMC ODM fileset support 5.0.0.0.
- Minimum PowerPath 2.1.2 supported.
- AIX 5.1 supported with 32-bit kernel. Requires minimum EMC ODM fileset support 5.0.0.0.
- This configuration includes support for fibre channel boot. See the single host section of the EMC Support Matrix for fibre channel boot specific requirements.
- For fibre channel boot support with HACMP the luns containing rootvg cannot be shared between hosts.
- AIX 5.1 only supported with 32-bit kernel. Minimum PowerPath Version 2.1.2 supported. Requires minimum EMC ODM fileset support 5.0.0.0.
- Requires minimum AIX 4.3.3 with APAR IY22024, Requires PSSP 3.4 with APAR IY32625
- Refer to Primus case #1.0.128870403.2749464 for configuration instructions.
- Requires minimum EMC ODM fileset support (4.3.3.1 IBM Fibre Channel interface support for Symmetrix).
- Requires minimum PSSP 3.4 APAR IY33448.
- FC–SW and FC–AL are supported on the same server.
- Feature codes supported: 2054: Power 3 High Noise, 2055: SP expansion I/O, 2056: 375 MHz Power 3 thin node, 2057: 375 MHz Power 3 wide node, 2058: 375 MHz Power 3 high node.
- Requires minimum HACMP APAR IY07313. Latest APAR for PSSP 3.1.1 is IY17870. Requires minimum RVSD APAR IY07130.
- IBM 6227 and 6228 adapters are supported on the same server. Mixed FC–AL and FC–SW are supported on the same server.
- LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5x66.26.19s.
- LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5567.46.24 or 5568.58.12

40. GAB disks (membership and service group heartbeat disks) are not supported.
41. VxVM and VxFS are not currently supported with PowerPath in this configuration.
42. Minimum PowerPath 3.0.2 is supported.
43. PowerPath is supported with LVM and JFS
44. Requires minimum AIX5.1 with maintenance level 03 APAR IY32749.
45. Minimum Powerpath version 3.0.3 is supported.
46. Requires minimum PSSP APAR IY38509
47. PSSP 3.5 supports a 32 or 64 bit kernel.
48. AIX 5.1 supported with 32/64 bit kernel.
49. See http://www.rs6000.ibm.com/resource/hardware/hardware_docs/sa38-0538/380538.pdf for appropriate HBA placement guidelines
50. Requires minimum ODM fileset support (5.0.0.0 EMC Symmetrix Fibre Channel support software).
51. IBM 6227 and IBM 6228 adapters are supported on the same server. Mixed FC-AL and FC-SW are supported on the same server.
6227 Filesets: devices.pci/df1000f7.com, devices.pci/df1000f7.diag, devices.pci/df1000f7.rte ;
6228 Filesets: devices.pci/df1000f7.com, devices.pci/df1000f7.diag, devices.pci/df1000f9.diag, devices.pci/df1000f9.rte
52. Requires adapter firmware 3.22A1, CLArrayS3.5.1 fileset support. Supports FC4700 with minimum flare code 8.46.xx.
53. AIX 5.1 32/64 bit Kernel supported. Requires minimum EMC ODM fileset support 5.0.0.0.
54. **AIX 5.2 requires Operating System APAR# IY36782, IY37744 and IY37746 for support with HACMP and HACMP/ES version 4.5 and PSSP 3.5.**
55. Minimum Powerpath version 3.0.2 is supported.
56. HACMP 4.5 when installing under AIX 5.2 requires HACMP 4.5 APAR# IY36938.
57. When installing under AIX 5.2 HACMP/ES 4.5 APAR# IY36938, HACMP/ES 4.5 APAR# IY36933, HACMP/ES 4.5 APAR# IY36626 and RSCT 2.3 APAR# IY36626 are required.
58. AIX 5.1-32/64 bit kernel supported. Requires CLArrayS3.5.1 fileset support.
59. Requires minimum IBM APAR IY43999
60. Requires a minimum of three nodes in the cluster.
61. For IBM AIX 5.1:requires Oracle RAC9i (9.2), PowerPath 3.0.2 or greater is supported.
62. **Supported with VCS 3.5 Maintenance Patch 1**
63. **Native names only. Power devices are not supported in a cluster configuration.**
64. **PowerPath supports LVM with JFS, and VxVM 3.2.2 with VxFS 3.4.4.**
65. **AIX 5.2 32/64 bit kernel supported. Requires Minimum EMC ODM fileset support 5.0.0.0.**
66. **Requires AIX APAR IY48995**

1. These clustered hosts require Symmetrix Host Adapter model OSD4-SW, WSD4-SW, DP-USD4-SW, or DP-WSD4-SW. Symmetrix getekeeper devices cannot be configured to shared SCSI busses for DYNIX/ptx 4.2.x. Only configure gatekeepers to private SCSI busses.
2. Common SCSI Bus.
3. Multi-port SCSI.
4. Can support up to 4-node clusters without SVM for DYNIX/ptx 4.4.5 and later, but only 2-node clusters with SVM shared disk groups.
5. Can support up to 4-node clusters for DYNIX/ptx 4.6.0 and later, for both HA and OPS.
6. EMC DP3-FCD4 supported on DYNIX/ptx 4.4.8, 4.4.9, 4.4.10, 4.5.2, 4.5.3, and 4.6.1 only. Requires minimum 5x67 microcode 5567.34.19A, or 5568.27.12A.
7. EMC DP3-FCD42G and EMC DP3-FCD42GS supported on DYNIX/ptx 4.4.8, 4.4.9 and 4.4.10 only.
8. Not supported on the EMC DP3-FCD4 or on the DP3-FCD42G(S).

Microsoft Windows 2000

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiON non-disruptive upgrades for Windows systems booting from CLARiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

1	AViiON: AV1400, AV2800, AV3800	Microsoft Windows 2000 Advanced Server: SP2 ⁴ , SP3 ⁴ , SP4 ⁴ ; Microsoft Windows 2000 Server SP4 ⁴	Microsoft MSCS ^{2,3}	HA: 2	Emulex: LP7000E-EMC, LP8000-EMC ⁵ , LP850-EMC; QLogic: QLA2200F-EMC, QLA2300F-E-SP, QLA2310F-E-SP, QLA2340-E-SP, QLA2342-E-SP	See ¹
2	AViiON: AV1400, AV2800, AV3800	Microsoft Windows 2000 Advanced Server: SP2 ⁴ , SP4 ⁴	Legato Automated Availability Manager (LAAM) 5.0 (Base) ^{6,7}	HA: 4	Emulex: LP7000E-EMC, LP8000-EMC ⁵ , LP850-EMC, LP9002-E (LP9002L-E); QLogic: QLA2200F-EMC, QLA2300F-E-SP, QLA2310F-E-SP, QLA2340-E-SP, QLA2342-E-SP	

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
- MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5x66.26.19s.
- LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5567.46.24 or 5568.58.12

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Requires Legacy PCI slot (not available on most new servers.)**
- Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).
- Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Oracle Cluster File System not supported for 9i RAC 9.2.0.1.0 . VxVm not supported. PowerPath 3.0 supported.
- LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5x66.26.19s.
- LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5567.46.24 or 5568.58.12
- GAB disks (membership and service group heartbeat disks) are not supported.

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- (Adaptec AHA-2944UW)
- Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).
- Requires Legacy PCI slot (not available on most new servers.)**
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Includes both Pentium PRO and XEON models
- Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supported by direct attach only**
- The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP. (HHBA-5101BK-01)
- HP NetServer LC2000 is only supported with two processors. Uni-Processor configurations are not supported
- LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5x66.26.19s.
- LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5567.46.24 or 5568.58.12
- GAB disks (membership and service group heartbeat disks) are not supported.

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Requires Legacy PCI slot (not available on most new servers.)**
- Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
- This HBA is equivalent to the qLogic QLA2310.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- Oracle Cluster File System not supported for 9i RAC 9.2.0.1.0
VxVm not supported. PowerPath 3.0 supported.
- Supported by direct attach only

13. Oracle Cluster File System not supported for 9i RAC 9.2.0.1.0.
VxVM not supported.
PowerPath 3.0 supported.
14. LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5x66.26.19s.
15. LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5567.46.24 or 5568.58.12
16. This HBA is equivalent to the qLogic QLA2340.
17. GAB disks (membership and service group heartbeat disks) are not supported.
18. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
19. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.
20. Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.

1. EMC recommends that HBAs of different vendors not be used in the same host server.
2. Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

- By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.
 By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.
 The workaround is to perform "symcfg discover" after rebooting.
- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
 - The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
- MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).
- Supported by direct attach only

Microsoft Windows 2003

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non-disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

2	PowerEdge: 1550, 1650, 1750, 2450, 2500, 2550 ⁵ , 2600, 2650, 4600, 6400, 6450, 6600, 6650, 8450; PowerVault: 770N, 775N	Microsoft Windows 2003: Enterprise Edition (Advanced Server) ² , Standard Edition (Server) ²	Microsoft MSCS ³	HA: 4	Emulex: LP10000-E, LP10000DC-E, LP1050-E, LP1050DC-E, LP8000-EMC ⁴ , LP9002-E (LP9002L-E), LP9002DC-E, LP9802-E, LP9802DC-E, LP982-E; QLogic: QLA2310F-E-SP, QLA2340-E-SP, QLA2342-E-SP	See ¹

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Powerpath 3.0.5 supported with MSCS clusters on Windows 2003.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.

5. PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
6. **No EMC Layered Applications supported on IA64 server platforms**
7. Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
8. MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
9. Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.

- Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.

Microsoft Windows NT

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non-disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- Lost connection to external storage (pulled or damaged cable connection).
 - External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
 - External storage director failures including failed lasers on Fibre Channel directors.
 - External storage power failure.
 - Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
 - Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements.
- Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN. NOTE: Windows NT installation will fail immediately after installing Network Services for hosts that use an Intel Network Interface Card (NIC).

1. EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
2. EMC recommends that HBAs of different vendors not be used in the same host server.
3. **Requires Legacy PCI slot (not available on most new servers.)**
4. MSCS multi cluster configurations supported. If multi–clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
5. HP LXR–PRO8 support has been discontinued.
6. Tested with Symmetrix 8000 Series, Connectrix ED–1032 3.0.1, and PowerPath 2.0 and above on each node.
7. Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
8. V1.0 is only qualified on Windows NT 4.0 SP3.
9. PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
10. The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
11. (HHBA–5101BK–01)
12. The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.

1. EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.

2. EMC recommends that HBAs of different vendors not be used in the same host server.

3. **Requires Legacy PCI slot (not available on most new servers.)**

4. MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.

5. Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.

6. Includes both Pentium PRO and XEON models

7. This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.

8. HP LXR-PRO8 support has been discontinued.
9. Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
10. Tested with Symmetrix 8000 Series, Connectrix ED-1032 3.0.1, and PowerPath 2.0 and above on each node.
11. V1.0 is only qualified on Windows NT 4.0 SP3.
12. HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
13. The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
14. (HHBA-5101BK-01)
15. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
16. Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).

4. MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
5. This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
6. HP LXR-PRO8 support has been discontinued.
7. V1.0 is only qualified on Windows NT 4.0 SP3.
8. Tested with Symmetrix 8000 Series, Connectrix ED-1032 3.0.1, and PowerPath 2.0 and above on each node.
9. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
10. For IBM Netfinity and xSeries Intel servers only.
11. (QLA2200) For IBM xSeries and Netfinity servers only.
12. Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
13. This HBA is equivalent to the qLogic QLA2310.
14. This HBA is equivalent to the qLogic QLA2340.

1. EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
2. EMC recommends that HBAs of different vendors not be used in the same host server.
3. **Requires Legacy PCI slot (not available on most new servers.)**
4. MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
5. Multi-port SCSI.
6. V1.0 is only qualified on Windows NT 4.0 SP3.

7. HP LXR-PRO8 support has been discontinued.
8. Tested with Symmetrix 8000 Series, Connectrix ED-1032 3.0.1, and PowerPath 2.0 and above on each node.
9. Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
10. The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
11. (HHBA-5101BK-01)
12. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.

- Requires NWPA.NLM V.3.07A update from Novell website.
- Maximum number of NWFS volumes that can be mounted is 64.
- Requires Legacy PCI slot (not available on most new servers.)
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Includes both Pentium PRO and XEON models
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- (HHBA-5101BK-01)
- EMC recommends that HBAs of different vendors not be used in the same host server.
- (Adaptec AHA-2944UW)
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- Novell Storage Services supported.
- Powerpath & ATF supported.
- Requires HBA firmware 1.79.
- HP NetServer LC2000 is only supported with two processors. Uni-Processor configurations are not supported
- Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).
- QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.

- Host must be offline for interfamily Symmetrix microcode upgrade.
- Watchdog Timer should be disabled in ocmargs.ora
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Supported with QLogic driver v6.05.00.
- Supported with QLogic driver v6.04.02.
- QLogic driver is available with Dell/Oracle CC kit.
- An RPM from Dell may be used to install the QLogic v6.X driver. RPM may be obtained from the QLogic website.
- Oracle Cluster File System v1.x supported with Linux v2.4.9–E9, E10, E12, E16, E24, E25.
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- OCFS (Oracle Cluster File System) is supported. Requires patch mount–2.11g–6i386.rpm (ocfs mount support).
- Driver v6.04.00 or above must be used with Qlogic HBAs for direct attach configurations.
- GAB disks (membership and service group heartbeat disks) are not supported.
- When VxVM is used, EMC recommends VxVM 3.2 update 2, VxFS 3.4 update 1 and above.
- Review single attach VxVM notes for PowerPath and DMP restrictions.
- This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.

- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
- Must use standard PCI 32bit/33MHz slot for SCSI
- Single HBA zoning is required regardless of the switch being utilized.**
- Host must be offline for interfamily Symmetrix microcode upgrade.**
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.**
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.**
- Emulex driver and BIOS available from <http://www.emulex.com>.**
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**

- Host must be offline for interfamily Symmetrix microcode upgrade.
- Watchdog Timer should be disabled in ocmargs.ora
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Supported with QLogic driver v6.05.00.
- Supported with QLogic driver v6.04.02.
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- OCFS (Oracle Cluster File System) is supported. Requires patch mount-2.11g-6i386.rpm (ocfs mount support).
- Oracle Cluster File System v1.x supported with Linux v2.4.9-E9, E10, E12, E16, E24, E25.
- Driver v6.04.00 or above must be used with Qlogic HBAs for direct attach configurations.
- GAB disks (membership and service group heartbeat disks) are not supported.
- When VxVM is used, EMC recommends VxVM 3.2 update 2, VxFS 3.4 update 1 and above.
- Review single attach VxVM notes for PowerPath and DMP restrictions.
- This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.

1. Multi-port SCSI.

2. SCSI supports targets 1-15, LUNs 0-7. LUN skipping is permitted, however, LUN 0 must exist for each target.

3. FC-AL supports 128 LUNs per adapter. LUN skipping is permitted, however, LUN 0 must exist for each adapter.

SuSE Linux Fujitsu Siemens

Fujitsu Siemens - SuSE Linux				
No.	Host System	Operating System	Cluster Software	Host Bus Adapter
1	Primergy: B210, C200, E200, F200, H200, H400, K400, L200, N200, P200, P250, R450, RX100, T850	SuSE Linux SLES 8 SP2a (v2.4.19-SuSE.304) ^{1, 2}	Fujitsu Siemens PRIMECLUSTER 4.0a2	Emulex: LP10000-E, LP10000DC-E, LP9002-E (LP9002L-E), LP9802-E
2	Primergy: F250 ³ , H250 ³ , H450, N800, RX200, RX300, RX600, RX800, TX200, TX300, TX600	SuSE Linux SLES 8 SP2a (v2.4.19-SuSE.304) ^{1, 2}	Fujitsu Siemens PRIMECLUSTER 4.0a2	Emulex: LP10000-E, LP10000DC-E, LP9002-E (LP9002L-E), LP9802-E; QLLogic QLA2200F-EMC

1. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.

2. Requires rev1_sles8sp2a.patch for CLARiON-attached hosts available from ftp://ftp.emc.com/pub/elab/linux.

3. Must use standard PCI 32bit/33MHz slot for SCSI

IBM

IBM - SuSE Linux						
No.	Host System	Operating System	Cluster Software	Max # Nodes	Host Bus Adapter	Comments
1	eServer BladeCenter HS20 (Model 8678) ^{10, 11}	SuSE Linux SLES 8 SP2a (v2.4.19-SuSE.304) ^{2, 3}	Microsoft MSCS ^{4, 5, 6, 7}	HA: 4	IBM HS20 FC Exp Card(48P7061) with: 2 Port Switch Module 48P7062 ^{12, 13} , Optical Pass-thru Module 02R9080 ^{8, 9}	See ¹

1. EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.

2. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPO.
3. Requires rev1_sles8sp2a.patch for CLARiON-attached hosts available from ftp://ftp.emc.com/pub/elab/linux.
4. Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
5. MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
6. Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.
7. Powerpath 3.0.5 supported with MSCS clusters on Windows 2003.
8. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"
This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
9. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
10. Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).
11. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
12. **Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
13. **Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**

- Multi-port SCSI.
- No OPS support for Solaris 7.
- This host supports only 5 V HBAs.
- 64-bit HBAs will not fit into the 32-bit slot due to a physical obstruction.
- In other words, pkginfo -I VRTSvcs should report 1.1.1 1999101416
- GAB disks (membership and service group heartbeat disks) are not supported.
- Disk Reservation Agent with PowerPath 2.0.3 only.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- PowerPath 2.0 and above with native name only, no hub.
- Powerpath requires V2.0.2 or later.
- Symm Socket/Smart Heartbeat is not supported at this time.
- Automatic remote failover is not supported at this time.
- VRTS VxVM 3.0.4 or 3.1 required. DMP must be disabled.
- PowerPath not supported.
- Requires TSBdctrl V1.2
- FC64: Hub supports up to 7 connections; PowerPath supported.
- Requires Cluster Perfect Patch PB00042-01, PowerPath 3.0.2 or later.
- Veritas VxVM 3.0.4 or higher can be used. DMP must be enabled.
- Fcode should be loaded on all HBA's at the time of installation. All drivers and fcode can be downloaded from <http://www.qlogic.com>. Supports SNIA HBA API.
- For all Sun Cluster 3.x configurations where TimeFinder or SRDF are being used, please refer to the white papers EMC Symmetrix with Sun Cluster 3.x on Avatar and PowerLink.
- Requires Symmetrix 8000 Series, PowerPath 3.0.4 or later, VxVM 3.2 or Solstice Disk Suite (SDS) 4.2.1, and microcode minimum 5567.46.24 – 5567.49.27, or 5568.52.18 or later. Symmetrix "PER" volume flag for Persistent Reservation support for devices accessible through more than two paths.
- OPS and RAC configurations running VxVM 3.2 VxVM 3.2 P03.
- For clustered pairs of more than 2 nodes, see the Sun Cluster 3.0 Configuration Guide.
- Requires MicroCode 5567.35.20 or higher. Volumes Should be enabled to support SCSI persistence (set PER flag for each volume).
- OPS and RAC configurations running VxVM 3.2 VxVM 3.2 P03.
- Channel configurations: multi-port SCSI preferred or common SCSI bus.
- Supported with PowerPath 3.x configurations only. Native Names only, no Power Devices. Requires Symmetrix 8000 Series, PowerPath 3.0.1 or later, VxVM 3.5.
- Supported with PowerPath 3.x configurations only. Native Names only, no Power Devices. Requires Symmetrix 8000 Series, PowerPath 3.0.1 or later, VxVM 3.5.
- Supported with PowerPath 3.x configurations only. Native Names only, no Power Devices. Requires Symmetrix 8000 Series, PowerPath 3.0.1 or later, VxVM 3.5. SCSI-3 Persistent Group Reserve support requires minimum microcode 5567.42.23A or later. Symmetrix "PER" volume flag setting required for devices accessible through more than 2 paths.
- Requires Sun patch 113277-09.
- LAAM (Legato Cluster) with SRDF integration requires minimum microcode level 5x66.26.19s.
- Update 6.
- For configurations with PowerPath 3.0.1 use native names only, and no power devices.
- Symmetrix SCSI-3 "PER" volume flag setting required for devices accessible through two or more paths.
- Requires Symmetrix 8000 Series, PowerPath 3.0.4 or later, VxVM 3.5 or later or Solstice Disk Suite (SDS) 4.2.1. Supported with Microcode 5568.52.18
5567 code revisions supported are 5567.46.24 or 5567.53.30. 5567.53.30 requires the PGR Phase 4 E-pack.
Symmetrix "PER" volume flag for Persistent Reservation support for devices accessible through more than two paths.
- If all FC connectivity to the array is lost (without a server shutdown), then after connectivity is restored, the user must execute a vxddctl enable command, before the VCS Oracle 9iRAC service group is brought back online.
- SRDF and/or Timefinder by RPQ only
- Requires Symmetrix 8000 Series and minimum microcode of (5567.50.28 or later) or (5568.54.20 or later).
- Review VERITAS Database Edition/Advanced Cluster 3.5 for Oracle9i RAC Release Notes for supported Oracle Database releases.
- Veritas MP2 is required for clusters with more than 2 servers**
- Please review Veritas support pages for latest patch information.
- Use of the LP9002DC or QLA2342 requires FCO A0218-1 from Sun for HBA's to operate in 66mhz mode. Without this FCO the HBA's will only come up in 33mhz mode which could have an impact on performance.**

Fibre Connectivity: Hub

Please refer to the Cables and Connectors section for more information. Please refer to the Base Connectivity Interoperability Application for details concerning kernel versions, minimum driver and BIOS / firmware revisions. Fanout represents the maximum initiators (host adapters) per array port. Fanin represents the number of array ports visible to a single initiator (host adapter). In arbitrated loop environments, these numbers represent the maximum initiators per loop. In switch environments, these numbers are achieved through Zoning. For further details on Fanin/Fanout, see the Connectrix Enterprise Storage Network Planning Guide, EMC Networked Storage Topology Guide, and CLARiON Open Systems Configuration Guide. For Switch Firmware levels and other fabric

parameters, see Switched Fabric Topology parameters.

- All adapters must be the same type except with HP-UX.
- 8-port adapter (Model DP3-FCD8) splits the Symmetrix director into two 4-port hubs. Symmetrix still operates with only 2 ports per director. This 8-port adapter supports both FC-AL and FC-SW connections. Cascading of hubs on the same 8-port adapter to other 8-port adapters or to other EMC-qualified hubs is not supported at this time. To connect a switch to this adapter only the lowest connector of each hub can be used.

HPQ HP-UX

HPQ HP-UX								
No.	Operating System	Host Bus Adapter	Hub	Fanin	FC-Fanout	FC-Luns/Storage Port	Luns/HBA	Luns/Loop

- All adapters must be the same type except with HP-UX.
- 2 Gb speed and autonegotiation on target ports must be disabled when connected to hubs.
- In HP and MC/ServiceGuard environments, the maximum number of active devices per server is 1024 for mid-range and high-end servers. This high device count is questionable for low-end servers (D/R-Class), and so remains at 768 for them (not counting alternate path LUNs for PV/Links or EMC PowerPath). Maximum limitations per server (subject to server and resources): HP-UX 10.20 768 devices, 1536 LUNs; HP-UX 11.0 2400 devices, 4800 LUNs; HP-UX 11i 4096 devices, 8096 LUNs; HP-UX 11i Version 1.5 (11.20) 4096 devices, 8096 LUNs.
- For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
- For HP-UX 11.0 of June 2000 or higher release is required (patch bundle XSWHWCR1100B.11.00.49.3 or XSWGRI1100B.11.00.49.3 or later released patch bundle).
- 256 LUN support: HP-UX 10.20 requires patch PHKL_23259 or patches superceded by or having co-dependencies as defined by HP. HP-UX 11.0 requires patch PHKL_21607 or patches superceded by or having co-dependencies as defined by HP.
- Using ESN Manager.
- In an HA environment, with HP-UX 11i, 512 LUNs per HBA are allowed.
- As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)

L2000 (product number A5191A)

N4000 Revision A (product number A3639A)

N4000 Revision B (product number A3639B)

- Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
- See Single section for minimum microcode required.
- Non-HA, single initiator only. PowerPath not supported.
- 8-port adapter (Model DP3-FCD8) splits the Symmetrix director into two 4-port hubs. Symmetrix still operates with only 2 ports per director. This 8-port adapter supports both FC-AL and FC-SW connections. Cascading of hubs on the same 8-port adapter to other 8-port adapters or to other EMC-qualified hubs is not supported at this time. To connect a switch to this adapter only the lowest connector of each hub can be used.
- No cascading (of an FA port to a hub, or an FA port to another FA port). No connecting a hub to a switch (direct-connect only). Homogeneous hosts/HBAs/OS required. No remote boot from Symmetrix allowed. Minimum Symmetrix microcode version 5566.23.18 required. Only one single PowerPath or PVLinks path per "side" of FA maximum. For PVLinks, primary and alternate paths must reside on different FA boards. In the HP-UX multi-initiator environment ESN Manager may be necessary to block LUN visibility between initiators connected to the same "side" of the FA (on the same loop), if such a restricted environment is desired by the customer.

- All adapters must be the same type except with HP-UX.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- 8-port adapter (Model DP3-FCD8) splits the Symmetrix director into two 4-port hubs. Symmetrix still operates with only 2 ports per director. This 8-port adapter supports both FC-AL and FC-SW connections. Cascading of hubs on the same 8-port adapter to other 8-port adapters or to other EMC-qualified hubs is not supported at this time. To connect a switch to this adapter only the lowest connector of each hub can be used.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- No switch support on the HP A5246A.
- The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
- (HHBA-5101BK-01)
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.

1. NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
2. Maximum number of NWFS volumes that can be mounted is 64.
3. NetWare 5.00 NSS has a 120 LUNs per port limitation. If NSS is used, the maximum LUNs per Symm-Port/HBA is 120/120.
4. 8-port adapter (Model DP3-FCD8) splits the Symmetrix director into two 4-port hubs. Symmetrix still operates with only 2 ports per director. This 8-port adapter supports both FC-AL and FC-SW connections. Cascading of hubs on the same 8-port adapter to other 8-port adapters or to other EMC-qualified hubs is not supported at this time. To connect a switch to this adapter only the lowest connector of each hub can be used.
5. (HHBA-5101BK-01)
6. EMC recommends that HBAs of different vendors not be used in the same host server.
7. Requires NWPANLM V.3.07A update from Novell website.
8. QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.

1. All adapters must be the same type except with HP-UX.
2. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPO.
3. Supported with QLogic driver v6.05.00.
4. Single HBA zoning is required regardless of the switch being utilized.
5. This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath.
6. Booting from EMC storage arrays is NOT supported with PowerPath.
7. The LP9002-E now ships with the LP9002L-E low profile adapter.
8. Host must be offline for interfamily Symmetrix microcode upgrade.
9. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
9. QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
10. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
11. This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
12. Emulex driver and BIOS available from <http://www.emulex.com>.
13. QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.

- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.

Fibre Connectivity: Switch

Fanout represents the maximum initiators (host adapters) per array port. Fanin represents the number of array ports visible to a single initiator (host adapter). In arbitrated loop environments, these numbers represent the maximum initiators per loop. In switch environments, these numbers are achieved through Zoning. For further details on Fanin/Fanout, see the Connectrix Enterprise Storage Network Planning Guide, EMC Networked Storage Topology Guide, and CLARiiON Open Systems Configuration Guide. For Switch Firmware levels and other fabric parameters, see Switched Fabric Topology parameters.

DG DG/UX

1. Addressable from Data Mover. Constrained by the number of targets addressable through a Symmetrix FA port.
2. "Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "N" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA): 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port. 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/ Fanin of 12:1/1:12 and Netware using the QLA2200F, which has a Fanout/Fanin of 6: 1/1:6. The Fanout/Fanin is restricted to 6:1/1:6. 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information. 4. Reference the Heterogeneous FA Port Sharing section of Director Bit Information. 5. Microcode level 5x66 and above.
3. EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
4. EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
5. EMC DS-16B2 for "Extended Fabric License" , use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.

- 256 LUN support: HP-UX 10.20 requires patch PHKL_23259 or patches superceded by or having co-dependencies as defined by HP. HP-UX 11.0 requires patch PHKL_21607 or patches superceded by or having co-dependencies as defined by HP.
- The 200-561-9XX, and 200-563-9XX FA director family support a total of 256 LUNs per FA port. (Hewlett Packard Alpha Tru64 supports 255 LUNs.)
- Heterogeneous storage attachments are supported in a Fibre Channel fabric configuration provided the different storage types are isolated in different fabric zones. Shared fabric and shared server are allowed with heterogeneous storage.
- Maximum of two hops between any two nodes of a SG cluster. Boot device cannot be more than 2 hops from initiator. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher. For the Inrange FC9000, single switch only. Connectrix ED-1032 requires Connectrix microcode 3.00.01 or later.
- For HP-UX 11.0 of June 2000 or higher release is required (patch bundle XSWHWCR1100B.11.00.49.3 or XSWG1100B.11.00.49.3 or later released patch bundle).
- Fabric support at firmware version 2.1.3 and above.
- For Fabric Switches, EMC recommends single initiator WWN zoning, but will support both WWN and port-, single-, or multi-initiator zoning.
- Switched fabric cannot use domain 8. Execute ioscan -fn following zone configuration changes on all affected servers so that the changes will be recognized. When using soft zoning (WWN) with PowerPath, if you remove a path from the zone configuration, you must remove this path from PowerPath in order to prevent accessibility to this path.
- Maximum of 320 visible LUNs per hba supported with HP-UX 10.20 HA configurations.
- Maximum of 320 visible LUNs per hba supported with HP-UX 11.0 HA configurations.
- Maximum of 512 visible LUNs per hba supported with HP-UX 10.20 non-HA configurations
- Maximum of 512 visible LUNs per hba supported with HP-UX 11.0 non-HA configurations
- If Fanin/Fanout are greater than 4:1/1:4. HP-UX 10.20 requires patch PHKL_23259 or patches superceded by or having co-dependencies as defined by HP. HP-UX 11.0 requires patch PHKL_21607 or patches superceded by or having co-dependencies as defined by HP.
- "Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "Y" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA): 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port. 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/ Fanin of 12:1/1:12 and Netware using the QLA2200F, which has a Fanout/Fanin of 6: 1/1:6. The Fanout/Fanin is restricted to 6:1/1:6. 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information. 4. The director bits must be set according to each initiator's required settings by using the Heterogeneous Host Configuration feature in the EMC Solutions Enabler, SYMCLI Device masking component Version 5.x. 5. Microcode level 5568 and above.
- In HP and MC/ServiceGuard environments, the maximum number of active devices per server is 1024 for mid-range and high-end servers. This high device count is questionable for low-end servers (D/R-Class), and so remains at 768 for them (not counting alternate path LUNs for PV/Links or EMC PowerPath). Maximum limitations per server (subject to server and resources): HP-UX 10.20 768 devices, 1536 LUNs; HP-UX 11.0 2400 devices, 4800 LUNs; HP-UX 11i 4096 devices, 8096 LUNs; HP-UX 11i Version 1.5 (11.20) 4096 devices, 8096 LUNs.
- For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/vol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
- Requires a minimum HP-UX 10.20 TFC or a minimum HP-UX 11.0 990P, or 11i. HP-UX versions may be mixed in the same logical quick loop.
- Minimum Symmetrix microcode 5265.42, 5266.22, 5267.22, 5566.22, 5567.29 .
- Switch support can be QuickLoop dedicated to any HP hosts in table titled "Clariion CX600/CX400 Base Connectivity" or heterogeneous fabric with HP FC-SW (fabric) hosts in that table. For FC4700, one port on each SP may be used for QuickLoop when the other port is used for FC-SW. QuickLoop support requires chargeable model DSBQLP-0D.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- QuickLoop and fabric intermixing on the same switch is allowed. Requires firmware rev v2.2.1a. QuickLoop must use port zoning.
- QuickLoop is not supported with Brocade 3900/12000 or ED-12000B.
- Firmware v3.0.2a or later is required for 2 Gb or auto sensing support with the DS-16B2 and Brocade 3200/3800 switches. Minimum of 5568-3414 microcode is required for 2 Gb/auto negotiation support on Symmetrix.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- Maximum of 512 visible LUNs per hba supported with HP-UX 11i v1.0 (HP-UX 11.11) HA and non-HA configurations
- Supported at minimum firmware version 2.00.01.
- No boot support at this time.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.
L1000 (product number A5576A)
L2000 (product number A5191A)
N4000 Revision A (product number A3639A)
N4000 Revision B (product number A3639B)
- HP-UX 11.0 switched fabric support is enabled with: fabric device driver version B.11.00.03 and higher; minimum operating system level HP/UX 11.0 990P with March 2000 HW-CR bundle. Refer to Base Connectivity table for additional information.
- Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
- See Single section for minimum microcode required.
- In an HA environment, with HP-UX 11i, 512 LUNs per HBA are allowed.
- Supports FC-AL only.
- Domain value 8 can not be utilized when attaching HP-UX initiators (hba's)
- Maximum of two hops between any two nodes of a SG cluster. Boot device cannot be more than 2 hops from initiator. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
- Solution Enabler 5.0 or later on the host for heterogeneous FA port sharing.
- Requires microcode level 5568.23 or later.
- In FC-AL mode, support 1280 LUNs/loop.
- Minimum Symmetrix microcode 5566.22, 5567.29.
- Maximum of two hops between any two nodes of a SG cluster. Boot device cannot be more than 2 hops from initiator. Symmetrix microcode version: 5566.35.23 or higher, 5567.29.15 or Higher.
- Boot support Minimum fw.v4.0.2a
- Initiators from servers running HP-UX 11.0 and initiators from servers running HP-UX 11i v1.0 (HP-UX 11.11) may share the same FA port.
- Maximum LUNs per server 8192

45. Maximum devices per server 4096
46. The Powerpath path must be removed from the Powerpath configuration for all paths deleted from a zone configuration utilizing non-hardware enforced WWN zoning in order to prevent accessibility to the paths deleted from the zone configuration.
47. HP-UX Tachyon TL Fibre Channel Driver patch PHSS_26799 required
48. Maximum of two hops between any two nodes belonging to the same Service Guard Cluster
49. Execute "ioscan -fn" following zone configuration changes on all affected servers in order for the changes to be recognized by the servers.
50. Boot device can not be located more than two hops from initiator utilized for booting
51. The switch port a hba is attached to which is utilized for HP-UX boot or dump processes must be configured for G_port lock.
52. Single initiator zoning recommended.
53. Firmware v2.5.1b or later required
54. minimum firmware revision v3.0.2m or later EMC qualified firmware revision
55. For D- and K-Class only: HP-UX 11.0 with PHKL_21834, HP A3404A, FC-AL only with switch TL mode.
56. T-port mode only. Port zoning only. Single switch only.
57. EMC supports both 8-port (A5667A) and 16-port (A5624A) versions.
58. HP A5624A and A5667A Fibre Channel switches are supported with Brocade firmware levels 1.3.0, 2.1.9d, 2.1.9F and 2.4.1, switched fabric cascading requires 2.1.9F firmware or higher.
59. Brocade QuickLoop.
60. Cascading of up to 2 switches and 2 hubs with QuickLoop.
61. Non-HA, single initiator only. PowerPath not supported.
62. Switch is for Enhanced Private Loop (EPL), not Fabric.
63. **EPL (Enhanced Private Loop) loop supports up to 8 HBAs and 16 Symmetrix ports (max of 24 port connections), but only 4 from any one cluster.**
64. **During initial switch configuration with fw 1.2 or earlier, in an HP-UX environment, the Persistent FC IDs must be enabled on the Vsan that contains any HP HBAs. The N_Port Area IDs must be manually configured to be unique, static, and persistent on the Vsan that contains any HP HBAs. the target storage array's N_Port ID must also be set to persistent and static. See MDS 9000 Family Configuration Guide for details.**
65. All adapters must be the same type except with HP-UX.
66. **"Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "Y" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA):** 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port. 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/ Fanin of 12:1/1:12 and Netware using the QLA2200F, which has a Fanout/Fanin of 6: 1/1:6. The Fanout/Fanin is restricted to 6:1/1:6. 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information. 4. Reference the Heterogeneous FA Port Sharing section of Director Bit Information. 5. Microcode level 5x66 and above.
67. **"Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "Y" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA):** 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port. 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/Fanin of 12:1/1:12 and NetWare using the QLA2200F, which has a Fanout/Fanin of 6:1/1:6. The Fanout/Fanin is restricted to 6:1/1:6. 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information. 4. Reference the Heterogeneous FA Port Sharing section of Director Bit Information, Table 138 on page 345. 5. Microcode level 5x66 and above.
68. Required Patch PHKL_28569, PHKL_26938 and 2port 2Gig driver version 11.11.01.
69. See HBA for min Driver version

- Open VMS is supported as of April 17, 2000, and requires a minimum Symmetrix microcode level of 5265.48.30, 5266.23.19s, or 5566.26.19s.
- OpenVMS 7.2-1, 7.2-1H1 FC-SW requires console firmware 5.6 or later and patch VMS721_fibre_SCSI-V0400. Available from <http://ftp1.support.compaq.com/public/>
- For compatibility with Connectrix ED-1032, requires Connectrix microcode 2.2 or later (KGPSA-BC) or 2.2.0 (KGPSA-CA).
- The 200-561-9XX, and 200-563-9XX FA director families support a total of 256 LUNs per FA port. (Hewlett Packard Alpha Tru64 supports 255 LUNs.)
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- Open VMS 7.3 FC-SW requires console firmware 5.6 or later and patch VMS73_update-V0100 or patch VMS73_fibre_SCSI-V0200.
- 16-port Fibre Channel board.
- 8-port Fibre Channel board.
- Open VMS 7.2-2 FC-SW requires console firmware 5.6 or later and patch VMS722_fibre_SCSI-V0100.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- The KGPSA-BC will not boot if the Brocade 12000/Connectrix ED-12000B port speed is set to auto-negotiate. Set the port speed to 1 Gb.

- Tru64 V4.0F BL13 Patch Kit 2 may introduce problems with KZPBA adapters. Tru64 V4.0F latest qualified Patch Kit 8 (DUV40FB22AS0008-20030730).
- V4.0F, V4.0G: 8 LUNs/Symmetrix Fibre director port (LUNs 000-007 valid).
- If sharing port with Tru64 UNIX V5 hosts, use the Heterogeneous Host Configuration feature in EMC Solutions Enabler SYMCLI Device Masking Component V5.x (minimum 5568 microcode), or use Tru64 UNIX V5 director bit settings (with OVMS director bit set, the resulting LUN 000 array controller device will not be usable as a disk device by the Tru64 hosts).
- V5.x: 255 LUNs/Symmetrix Fibre director port (LUNs 000-0FE valid) on Symmetrix 8000 Series, requires OVMS director bit setting (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, the LUN 000 array controller device will not be usable by the Tru64 host.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- Requires the Heterogeneous Host Configuration feature in EMC Solutions Enabler SYMCLI Device Masking Component Version 5.x
- Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).
- Tru64 V4.0G latest qualified Patch Kit 4 (T64V40GB22AS0004-20030731).
- Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).
- Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)

- For all PCI-based hosts only: See http://www-1.ibm.com/servers/eserver/pseries/library/hardware_docs/sa38/380538.pdf for appropriate HBA placement guidelines.
- The IBM 2032-001 is the McData ED-5000.
- IBM SAN FC S08 (8-port) and S16 (16-port). Firmware level is 2.1.3. S08SAN FC switch includes four shortwave optical GBIC ports, and the option to add an additional 4 (8 total) longwave or shortwave ports to the S08. The S08 8-port switch is a single power entry. S16 SAN FC switch includes four shortwave optical GBIC ports, and the option to add an additional 12 (16 total) longwave or shortwave ports to the S16. The S16 is dual-powered. S08 & S16: 1) Shortwave GBIC: Feature Code=2010; 2) Longwave GBIC: Feature Code=2020; 3) Fibre Channel Cable Multimode optical 50.0u, 5m: Feature Code=5805; 4) Fibre Channel Cable Multimode optical 50.0u, 25m: Feature Code=5825.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- All adapters must be the same type except with HP-UX.
- Fibre Channel device driver distributed and supported by Bull.
- MSKG008-0000 = Brocade Silkworm 2800.
- Firmware revision levels distributed and supported by Bull. Please see appropriate Bull documentation.
- This is a Brocade Silkworm 2800 (16 ports)
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- "Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "Y" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA): 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port. 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/Fanin of 12:1/1:12 and Netware using the QLA2200F, which has a Fanout/Fanin of 6: 1/1:6. The Fanout/Fanin is restricted to 6:1/1:6. 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information. 4. Reference the Heterogeneous FA Port Sharing section of Director Bit Information. 5. Microcode level 5x66 and above.
- No longer available
- The 200-561-9XX, and 200-563-9XX FA director families support a total of 256 LUNs per FA port. (Hewlett Packard Alpha Tru64 supports 255 LUNs.)
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.

IBM DYNIX/ptx

IBM DYNIX/ptx								
No.	Operating System	Host Bus Adapter	Switch	Fanin	FC-Fanout	FC-Luns/Storage Port	Luns/HBA	Port sharing
1	IBM DYNIX/ptx: 4.4.7 ¹ , 4.4.8 ¹ , 4.5.2 ¹ , 4.5.3 ¹ , 4.6.1 ¹	IBM: IOC-210-52 (LP6500) ² , IOC-210-54 (LP7000E-N1) ²	Brocade Silkstorm 2800 ^{3,4} , EMC Connectrix DS-16B ^{3,4,5} , Sequent: FCS-0006-01 ³ , FCS-0008-01 ³ , FCS-0016-02 ³ , FCS-0016-05 ³	15	16	256	256	N

- For DYNIX/ptx 4.4.x connected to Brocade 2xxx, EMC, FCS-xxxx families of switches, configure the following DYNIX/ptx OS parameters: fabric.ops.mode.vcEncode: 1, route.delayReroute: 1, route.stickyRoutes: 1, xlativemodeDisable: 1.
- EMC DP3-FCD42G and EMC DP3-FCD42GS supported on DYNIX/ptx 4.4.8, 4.4.9 and 4.4.10 only.
- The 200-561-9XX, and 200-563-9XX FA director families support a total of 256 LUNs per FA port. (Hewlett Packard Alpha Tru64 supports 255 LUNs.)
- Only supported with IBM xSeries host that does not have an internal switch installed. Requires firmware 2.1.7 or 2.2.1.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- T-port mode only. Port zoning only. Single switch only.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.
- When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.

- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.
- Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)

Microsoft Windows 2003

6	Microsoft Windows 2003: Enterprise Edition (Advanced Server) ¹ , Standard Edition (Server) ¹	IBM HS20 FC Exp Card(48P7061) with Optical Pass-thru Module 02R9080 ^{11, 12}	Brocade Silkworm: 12000, 2400, 2800, 3200, 3800, 3900, 6400; Cisco MDS: 9120, 9140, 9216, 9509; EMC Connectrix: DS-16B2 ² , DS-16B3, DS-16M, DS-16M2, DS-24M2, DS-32B2 ⁴ , DS-32M, DS-32M2, DS-8B, DS-8B2, ED-1032, ED-12000B ⁴ , ED-140M, ED-64M; McDATA: ED-5000, ED-6064, ES-3016, ES-3032, ES-3216, ES-3232, ES-4300 ¹³ , ES-4500	12	16	256	223, 256	Y

- EMC recommends that HBAs of different vendors not be used in the same host server.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- T-port mode only. Port zoning only. Single switch only.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- This HBA is equivalent to the qLogic QLA2340.
- This HBA is equivalent to the qLogic QLA2310.
- This HBA is equivalent to the Emulex LP982.
- Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.
- When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.

- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.
- Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)

1. NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
2. Maximum number of NWFS volumes that can be mounted is 64.
3. Extended Fabric software license is bundled into DS-xB models. Optional Extended Fabric software license for all DS-xB switches ordered after July 4, 2001 require chargeable model DSBXFAB-0D.
4. "Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "Y" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA):
 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port.
 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/Fanin of 12:1/1:12 and NetWare using the QLA2200F, which has a Fanout/Fanin of 6:1/1:6. The Fanout/Fanin is restricted to 6:1/1:6.
 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information.
 4. Reference the Heterogeneous FA Port Sharing section of Director Bit Information, Table 138 on page 345.
 5. Microcode level 5x66 and above.
5. NetWare 5.00 NSS has a 120 LUNs per port limitation. If NSS is used, the maximum LUNs per Symm-Port/HBA is 120/120.
6. EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
7. EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
8. ED-64 and ED-1032 not supported for FC5300.
9. EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
10. "Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "Y" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA):
 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port. 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/ Fanin of 12:1/1:12 and Netware using the QLA2200F, which has a Fanout/Fanin of 6: 1/1:6. The Fanout/Fanin is restricted to 6:1/1:6. 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information. 4. Reference the Heterogeneous FA Port Sharing section of Director Bit Information. 5. Microcode level 5x66 and above.
11. Requires NWPA.NLM V.3.07A update from Novell website.
12. For IBM Netfinity and xSeries Intel servers only.
13. (QLA2200) For IBM xSeries and Netfinity servers only.
14. This HBA is equivalent to the qLogic QLA2310.
15. This HBA is equivalent to the qLogic QLA2340.
16. Qlogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.
17. Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)

- All adapters must be the same type except with HP-UX.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RQP.
- Supported with QLogic driver v6.05.00.
- Single HBA zoning is required regardless of the switch being utilized.
- "Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "Y" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA): 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port. 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/ Fanin of 12:1/1:12 and Netware using the QLA2200F, which has a Fanout/Fanin of 6: 1/1:6. 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information. 4. Reference the Heterogeneous FA Port Sharing section of Director Bit Information. 5. Microcode level 5x66 and above.
- Requires Brocade firmware v2.5.1b or later.
- Requires Brocade firmware v3.0.2a or later.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- Requires Connectrix microcode v2.0.1 or later or v2.2 or later.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- NetWare 5.00 NSS has a 120 LUNs per port limitation. If NSS is used, the maximum LUNs per Symm-Port/HBA is 120/120.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.
- Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)

- All adapters must be the same type except with HP-UX.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiiON-attached hosts available from ftp://ftp.emc.com/pub/elab/linux.
- Single HBA zoning is required regardless of the switch being utilized.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- "Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "Y" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA):** 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port. 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/ Fanin of 12:1/1:12 and Netware using the QLA2200F, which has a Fanout/Fanin of 6: 1/1:6. The Fanout/Fanin is restricted to 6:1/1:6. 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information. 4. Reference the Heterogeneous FA Port Sharing section of Director Bit Information. 5. Microcode level 5x66 and above.
- Requires Brocade firmware v2.5.1b or later.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- Requires Connectrix microcode v2.0.1 or later or v2.2 or later.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- Requires Brocade firmware v3. 0. 2a or later.
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)

- "Port Sharing" allows any OS/HBA designated with a "Y" (for Yes) to safely share a Symmetrix FA port with any other OS/HBA designated with a "Y" provided all of the following requirements are met (Note: "N" for No means this host cannot share an FA port with any different OS/HBA): 1. ESN Manager is required to prevent sharing Symmetrix devices between Operating Systems on a single FA port. 2. Fanout/Fanin is restricted to the lowest Host/HBA support as called out in this table. Example: Windows 2000 using the QLA2200F, which has a Fanout/ Fanin of 12:1/1:12 and Netware using the QLA2200F, which has a Fanout/Fanin of 6: 1/1:6. The Fanout/Fanin is restricted to 6:1/1:6. 3. See appropriate host matrices for approved drivers, BIOS, firmware, boot and cluster information. 4. Reference the Heterogeneous FA Port Sharing section of Director Bit Information. 5. Microcode level 5x66 and above.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- EMC DS-16B2 for "Extended Fabric License" , use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- T-port mode only. Port zoning only. Single switch only.
- No boot support at this time.

- EMC software will function on neither the VMkernel nor the VMs as the currently-released versions of the SymAPI do not include support for VMware ESX.
- Path failover and load-balancing are not supported.
- Windows 2000 SP3 and SP4, Windows NT 4.0, and RHEL 2.1 ES/AS are qualified to run as Virtual Machines.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- Supported with QLogic driver v6.04.00-emc included in the VMware ESX v1.5.2 patch 5 release and BIOS v1.34.
- Supported with QLogic driver v6.04.00-emc included in the VMware ESX v1.5.2 patch 4 release and BIOS v1.34.
- Windows 2000 SP4, Windows 2003, and RHEL 2.1 ES/AS are qualified to run as Virtual Machines.
- PowerPath is not supported on VMware ESX v2.0.1. However, the native VMware ESX v2.0.1 path failover is supported on Symmetrix 8000 and DMX.

iSCSI to FC Routing

No.	Operating System	Network Interface Card	Driver	Network Configuration	Bridge	Firmware Revision	Comments
1	Microsoft Windows 2000: Advanced Server SP ^{3,7} , Server SP ^{3,7} ; Sun Solaris 8	Generic NIC 10/100, Generic NIC GE	Cisco 2.1.4	LAN Only	Cisco SN 5420 ^{2, 3, 4, 5, 6}	Cisco 2.1.2.6	See ¹
2	Microsoft Windows 2000: Advanced Server SP ^{4,7} , Server SP ^{4,7} ; Microsoft Windows 2003: Enterprise Edition (Advanced Server) ⁷ , Standard Edition (Server) ⁷	Generic NIC 10/100, Generic NIC GE	Microsoft 1.01 ^{3, 4, 8, 9}	LAN Only ^{10, 11}	Nishan IPS 3300, Nishan IPS 4300	4.1	See ^{12, 13, 14, 15}

- 5568.47.17 is the minimum code required for a 5420 on the Symmetrix 8000.
- Refer to document - Symmetrix in an iSCSI Cisco Storage Router Configuration EMC P/N 300-000-688, for configuration guidelines.
- Booting over iSCSI is not supported.
- Clusters are not supported.
- SymAPI 5.0.1 is required.
- PowerPath is supported and the configuration is specified in the configuration document.

7. EMC recommends that HBAs of different vendors not be used in the same host server.
8. **Microsoft Dynamic Disks are not supported.**
9. **The maximum number of iSCSI LUNs supported per host system is 128.**
10. **Layer 2 or single subnet TCP/IP LAN**
11. **Requires a dedicated network for iSCSI storage only. The network should be design to have no packet loss or packet duplication.**
12. **This configuration requires completion of a Pre-Sales Questionnaire (PSQ).**
13. **PowerPath 3.0.5 is supported with different subnets for each path.**
14. **LUN masking requires Solutions Enabler 5.3 with SAN Manager 5.1.**
15. **A maximum of 12:1 fan-in is supported.**

1. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
2. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
3. Sites using VERITAS VxVM, see VERITAS Volume Manager Table.
4. Configurations are limited to systems using HP-UX Logical Volume Manager (LVM). All devices configured into PowerPath must also be configured into HP LVM.
5. As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)
 L2000 (product number A5191A)
 N4000 Revision A (product number A3639A)
 N4000 Revision B (product number A3639B)

6. Supported with HP-UX 11.0, 11i only
7. **Required Patch PHKL_28569, PHKL_26938 and 2port 2Gig driver version 11.11.01.**
8. **Host must be configured as a 64Bit operating system.**
9. **With PowerPath 3.0.1 and later, HP-UX 11i, Symm6 support: VxVM 3.2 is supported; VxVM 3.5 currently not supported.**

- EMC recommends that HBAs of different vendors not be used in the same host server.
- ATF/CDE and PowerPath cannot co-exist in the same server.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
- (HHBA-5101BK-01)
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- This HBA is equivalent to the qLogic QLA2340.
- Stratus ftServer OS release 2.1 or greater required for Stratus ftServers.
- When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.

- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.
- Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.
- EMC does not support the Emulex equivalent of N8190-105. Check with NEC on where to download the latest supported firmware and boot BIOS for this adapter.

- This kernel is supported with PowerPath v3.0.2 via RPK only.
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
- PowerPath Base is supported on the FC4500 and CX200 only.
- Single HBA zoning is required regardless of the switch being utilized.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Requires QLogic driver v6.04.01 (included in 2.4.9–e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- Host must be offline for interfamily Symmetrix microcode upgrade.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- CLARiiON and Symmetrix can co–exist in the SAN with the same server.**

SuSE Linux

SuSE Linux			
No.	Operating System	Host Bus Adapter	Application Software
1	SuSE Linux SLES 8 SP2a (v2.4.19–SuSE.304) ^{1, 2}	Emulex: LP10000–E ^{3, 4, 5, 6} , LP10000DC–E ^{3, 4, 5, 6} , LP1050–E ^{3, 4, 5, 6, 10, 12} , LP1050DC–E ^{3, 4, 5, 6, 10, 12} , LP9002–E (LP9002L–E) ^{3, 4, 5, 6, 9} , LP9002DC–E ^{3, 4, 5, 6, 8} , LP9802–E ^{3, 4, 5, 6} , LP9802DC–E ^{3, 4, 5, 6, 8} , LP982–E ^{3, 4, 5, 6, 10, 11}	PowerPath 3.0.4 b012 ⁷

- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiiON–attached hosts available from <ftp://ftp.emc.com/pub/elab/linux>.
- Single HBA zoning is required regardless of the switch being utilized.
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- PowerPath 3.0.3 b065 needs to be installed with the RPM “--noscripts” option prior to installing PowerPath 3.0.4 b012.
- Use the boot option “acpi=oldboot” in SuSE SLES8 SMP configurations with the LP9802DC–E and LP9002DC–E adapters
- The LP9002–E now ships with the LP9002L–E low profile adapter.
- Host must be offline for interfamily Symmetrix microcode upgrade.**
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**

16	IBM AIX with EMC Fibre Channel Interface	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹⁴ , Disable Queue Reset on Unit Attention (D) ^{11, 12}	
17	IBM AIX with FC 6227, 6228, 6239	Common Serial Number (C) ⁷ , Disable Queue Reset on Unit Attention (D) ^{11, 12} , SCSI 3 (SC3)	
18	Linux	Common Serial Number (C)⁷, Enable Fibrepath on this Port (VCM)⁴¹, Enable Hard Addressing (H), Tagged Command (T), Unique World Wide Name (UWN)	
19	Linux ^{39, 40} , Linux ^{40, 42}	Common Serial Number (C) ⁷ , Enable Auto Negotiation (EAN) ³ , Enable Fibrepath on this Port (VCM) ⁴¹ , Enable Point-to-point (PP), Unique World Wide Name (UWN)	
20	NCR MPRAS / Windows NT, NCR MPRAS / Windows NT ²⁰ , NCR MPRAS / Windows NT ³²	Disable Queue Reset on Unit Attention (D) ²⁴ , Environment Reports to Host (E) ²³	
21	Novell Netware, Novell Netware ²⁵ , Novell Netware ^{25, 26} , Novell Netware ²⁶ , Novell Netware ^{26, 28}	Disable Queue Reset on Unit Attention (D) ²⁷	
22	Sequent Numa-Q	Common Serial Number (C), Environment Reports to Host (E), Sequent Host (SEQ)	
23	Sequent NUMA-Q (DYNIX/ptx 4.4.x & 4.5.x)	Common Serial Number (C), Enable Volume Set Addressing (V), Environment Reports to Host (E), Sequent Host (SEQ)	
24	Sun	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹⁴ , Common Serial Number (C) ^{10, 35, 36, 37} , Disable Queue Reset on Unit Attention (D) ^{10, 11, 12, 36, 37, 38} , Enable Sunapee (SCL) ³⁷	
25	VERITAS Cluster Server (VCS), EMC GeoSpan for VCS	Common Serial Number (C) ⁹ , Disable Queue Reset on Unit Attention (D) ⁸	
26	Windows NT / 2000, Windows NT / 2000 ²⁰	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹⁴ , Common Serial Number (C) ⁷ , Disable Queue Reset on Unit Attention (D) ^{11, 12} , Enable Auto Negotiation (EAN), Enable Fibrepath on this Port (VCM) ²¹ , Enable Volume Set Addressing (V) ²² , Unique World Wide Name (UWN)	

1. Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).

2. **Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).**

3. EAN bit set for 2 Gb FA support.

4. Direct connect only, no hubs.

5. These settings refer to the configuration in the Switch section (see FA Port Sharing column) Note: operating environments that have required director bit settings other than these are not supported.

6. Note: With the introduction of EMC Solution Enabler 5.0, FA ports need not use the 'Heterogeneous FA Port Sharing' flags. Instead, users can use the CLI function 'Heterogeneous Host Configuration' to set the director flags for each initiator.

7. C Bit required for VERITAS VxVM DMP functionality.

8. D Bit is not required for VCS 2.0 or later.

9. C Bit with Veritas DMP.

10. C + D Bits with Veritas DMP.

11. Sites with PowerPath 2.0 or later already running with the D-bit enabled do not require the D-bit to be disabled.

12. D Bit required with PowerPath 1.5.x or earlier.

13. Requires OV/K/0041.3

14. A4S bit when sharing AS/400 drives on this port (direct connect only).

15. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lv01 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.

16. Requires HP-UX 11.0 Extension Pack release May 1999 or equivalent.

17. Symmetrix microcode supported: 5266.40.28 or higher, 5566.41.28 or higher, 5267.27.19 or higher, 5567.34.19 or higher.

18. Requires HP-UX 11.0 General Release patch bundle XSWG1100 B.11.00.47.05 released November 1999 or equivalent.

19. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
20. EMC recommends that HBAs of different vendors not be used in the same host server.
21. VCM for VCM configurations only
22. V Bit for HP/Agilent controllers only
23. E Bit: if Windows NT OS is used with TNT, set the FBA Environmental Sense key to 4, else set it to 6.
24. D Bit for multiple vendor platforms: if only NCR hosts, set IMPL flag A010.
25. **NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.**
26. Maximum number of NWFS volumes that can be mounted is 64.
27. D Bit with Cluster.
28. Requires NWPA.NLM V.3.07A update from Novell website.
29. Open VMS 7.1-2 requires console firmware 5.6 or later and patch VMS712_SCSI-V0300.
30. OpenVMS 7.2-1, 7.2-1H1 FC-SW requires console firmware 5.6 or later and patch VMS721_fibre_SCSI-V0400. Available from <http://ftp1.support.compaq.com/public/>
31. Subject to IBMs limitations per host model.
32. Limited support available for MPARS 3.01.
33. Open VMS 7.3 FC-SW requires console firmware 5.6 or later and patch VMS73_update-V0100 or patch VMS73_fibre_SCSI-V0200.
34. Open VMS 7.2-2 FC-SW requires console firmware 5.6 or later and patch VMS722_fibre_SCSI-V0100.
35. C Bit with Sun Cluster 3.0.
36. Enabling the D-bit for DMP is recommended but not required for VxVM 3.1 and higher. The D-bit is not required for VxVM 3.1 and higher.
37. C + D + SCL Bits with SUN Cluster 1.x, 2.x.
38. Note: In a heterogeneous FA port sharing environment using VxVM 3.1 or higher, D-bit should be disabled.
39. This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
40. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPO.
41. VCM for Volume Logix configurations only
42. Supported with QLogic driver v6.05.00.
43. V5.x:255 LUNs/Symmetrix Fibre director port (LUNs 001-0FE valid) Symmetrix 8000 Series only, OVMS director flag required (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, LUN 000 is not usable by Tru64 host.
44. **Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).**
45. **FSC requires that all patches for Solaris 9 be obtained through FSC in the form of a Solaris 9 PTF patch CD. The current patch CD is Solaris 9 PTF R03111.**

5x67 Settings

There are no specific director bit settings required for iSCSI except the VCM bit with the following condition: VCM bit is required to enable Volume Logix functionality and for Challenge Handshake Authentication Protocol (CHAP).

No.	Operating Environment	Bits to Set
1	Base Settings: 5x66/67 Heterogeneous FA Port Sharing	Common Serial Number (C) ⁵ , Enable Fibrepath on this Port (VCM), Enable Point-to-point (PP), SCSI 3 (SC3), Tagged Command (T), Unique World Wide Name (UWN)
2	Bull Escala / AIX FC-AL	Disable Queue Reset on Unit Attention (D) ^{10, 11} , Enable Hard Addressing (H), Tagged Command (T), Unique World Wide Name (UWN)
3	Bull Escala / AIX FC-SW	Common Serial Number (C), Disable Queue Reset on Unit Attention (D) ^{10, 11} , Enable Point-to-point (PP), Tagged Command (T), Unique World Wide Name (UWN)
4	Caldera (SCO) UnixWare 7.1.x	Common Serial Number (C) ³⁷ , Enable Fibrepath on this Port (VCM) ⁸ , Enable Hard Addressing (H), Tagged Command (T), Unique World Wide Name (UWN)
5	Data General AViiON NUMA 25000	Disable Queue Reset on Unit Attention (D), Enable Point-to-point (PP), Tagged Command (T), Unique World Wide Name (UWN)
6	EMC Celerra	Avoid Reset Broadcast (ARB), Enable Fibrepath on this Port (VCM) ⁸ , Enable Point-to-point (PP), Tagged Command (T), Unique World Wide Name (UWN)

1. Tru64 V4.0F BL13 Patch Kit 2 may introduce problems with KZPBA adapters. Tru64 V4.0F latest qualified Patch Kit 8 (DUV40FB22AS0008-20030730).
2. Tru64 V4.0G latest qualified Patch Kit 4 (T64V40GB22AS0004-20030731).
3. Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).
4. Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).
5. C Bit required for VERITAS VxVM DMP functionality.
6. C Bit with Veritas DMP.
7. D Bit is not required for VCS 2.0 or later.
8. VCM for Volume Logix configurations only
9. C + D Bits with Veritas DMP.
10. Sites with PowerPath 2.0 or later already running with the D-bit enabled do not require the D-bit to be disabled.
11. D Bit required with PowerPath 1.5.x or earlier.
12. H Bit for FC-AL topology
13. Requires OV/K/0041.3
14. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
15. Supported with QLogic driver v6.05.00.
16. A4S bit when sharing AS/400 drives on this port (direct connect only).
17. For HP-UX systems only:LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
18. Requires HP-UX 11.0 Extension Pack release May 1999 or equivalent.
19. Symmetrix microcode supported:5266.40.28 or higher, 5566.41.28 or higher, 5267.27.19 or higher, 5567.34.19 or higher.
20. Requires HP-UX 11.0 General Release patch bundle XSWG1100 B.11.00.47.05 released November 1999 or equivalent.
21. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
22. EMC recommends that HBAs of different vendors not be used in the same host server.
23. VCM for VCM configurations only
24. Set bit for HP (e.g.: D8602A, D8602B / Agilent (e.g.: HHBA-5101B, HHBA-5101C) controllers only.
25. D Bit for multiple vendor platforms; if only NCR hosts, set IMPL flag A010.
26. E Bit: if Windows NT OS is used with TNT, set the FBA Environmental Sense key to 4, else set it to 6.

27. NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
28. Maximum number of NWFS volumes that can be mounted is 64.
29. D Bit with Cluster
30. E Bit with MPE/ix 5.5, 6.0, 6.5, 6.5.02.
31. Requires NWPA.NLM V.3.07A update from Novell website.
32. Open VMS 7.1-2 requires console firmware 5.6 or later and patch VMS712_SCSI-V0300.
33. OpenVMS 7.2-1, 7.2-1H1 FC-SW requires console firmware 5.6 or later and patch VMS721_fibre_SCSI-V0400. Available from <http://ftp1.support.compaq.com/public/>
34. Limited support available for MPARS 3.01.
35. Open VMS 7.3 FC-SW requires console firmware 5.6 or later and patch VMS73_update-V0100 or patch VMS73_fibre_SCSI-V0200.
36. Open VMS 7.2-2 FC-SW requires console firmware 5.6 or later and patch VMS722_fibre_SCSI-V0100.
37. C Bit with Multi-path.
38. Enabling the D-bit for DMP is recommended but not required for VxVM 3.1 and higher. The D-bit is not required for VxVM 3.1 and higher.
39. C + D + SCL Bits with SUN Cluster 1.x, 2.x.
40. V5.x:255 LUNs/Symmetrix Fibre director port (LUNs 001-0FE valid) Symmetrix 8000 Series only, OVMS director flag required (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, LUN 000 is not usable by Tru64 host.
41. **Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).**
42. **FSC requires that all patches for Solaris 9 be obtained through FSC in the form of a Solaris 9 PTF patch CD. The current patch CD is Solaris 9 PTF R03111.**
43. **Minimum microcode revision level 5670.23.25. 5568 and 5669 are on a RPQ basis at this time.**
44. EAN bit set for 2 Gb FA support.

5x66 Settings

There are no specific director bit settings required for iSCSI except the VCM bit with the following condition: VCM bit is required to enable Volume Logix functionality and for Challenge Handshake Authentication Protocol (CHAP).

No.	Operating Environment	Bits to Set
1	Base Settings: 5x66/67 Heterogeneous FA Port Sharing	Common Serial Number (C) ¹ , Enable Fibrepath on this Port (VCM), Enable Point-to-point (PP), SCSI 3 (SC3), Tagged Command (T), Unique World Wide Name (UWN)

35. C Bit with Multi–path.
36. C + D + SCL Bits with SUN Cluster 1.x, 2.x.
37. Enabling the D–bit for DMP is recommended but not required for VxVM 3.1 and higher. The D–bit is not required for VxVM 3.1 and higher.
38. V5.x:255 LUNs/Symmetrix Fibre director port (LUNs 001–0FE valid) Symmetrix 8000 Series only, OVMS director flag required (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, LUN 000 is not usable by Tru64 host.
39. **Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003–20030929).**
40. **FSC requires that all patches for Solaris 9 be obtained through FSC in the form of a Solaris 9 PTF patch CD. The current patch CD is Solaris 9 PTF R03111.**
41. **Minimum microcode revision level 5670.23.25. 5568 and 5669 are on a RPQ basis at this time.**
42. EAN bit set for 2 Gb FA support.

5265 Settings

There are no specific director bit settings required for iSCSI except the VCM bit with the following condition: VCM bit is required to enable Volume Logix functionality and for Challenge Handshake Authentication Protocol (CHAP).

No.	Operating Environment	Bits to Set
1	Base Settings: 5265.11.11 and below / Fibre	Common Serial Number (C), Enable Disk Array Inq Response (A), Enable Hard Addressing (H), Enable Volume Set Addressing (V), Global Third Party Logout (TP), Tagged Command (T), Unique World Wide Name (UWN)
2	Base Settings: 5265.14.12 / Fibre, Base Settings: 5265.17.13 / Fibre, Base Settings: 5265.19.14 and above / Fibre	Common Serial Number (C), Enable Disk Array INQ Response (DAR), Enable Hard Addressing (H), Enable Volume Set Addressing (V), Global Third Party Logout (TP), Tagged Command (T), Unique World Wide Name (UWN)
3	BULL Escala / AIX	Disable Queue Reset on Unit Attention (D) ¹⁵ , Enable Hard Addressing (H), Enable Point–to–point (PP), Return BUSY on ABORT (B), Tagged Command (T), Unique World Wide Name (UWN)
4	Data General AViiON 25000	Command Reordering (R), Disable Queue Reset on Unit Attention (D), Enable Point–to–point (PP), Tagged Command (T), Unique World Wide Name (UWN)
5	EMC Celerra	Avoid Reset Broadcast (ARB), Enable Fibrepath on this Port (VCM) ⁹ , Enable Point–to–point (PP), Tagged Command (T), Unique World Wide Name (UWN)
6	EMC Connectrix	Common Serial Number (C), Enable Hard Addressing (H), Enable Point–to–point (PP), Enable Volume Set Addressing (V), Global Third Party Logout (TP), Port as Disk Array (A), Tagged Command (T), Unique World Wide Name (UWN)
7	FSC PRIMEPOWER (GP7000F) Series Host, FSC PRIMEPOWER (GP7000F) Series Host²³	Command Reordering (R), Common Serial Number (C) ⁷ , Disable Queue Reset on Unit Attention (D), Enable Hard Addressing (H), Enable Point–to–point (PP), Tagged Command (T), Unique World Wide Name (UWN)

No.	Operating Environment	Bits to Set
8	FSC Reliant UNIX RM Series	Command Reordering (R), Disable Queue Reset on Unit Attention (D), Enable Hard Addressing (H), Enable Point-to-point (PP), Enable Siemens: RM/400 (S), Environment Reports to Host (E), Tagged Command (T), Unique World Wide Name (UWN)
9	Fujitsu Services (ICL) Open VME, Fujitsu Services (ICL) Open VME ¹⁰ , Unisys SMP61000 Servers, U6000, Aquanta servers	Common Serial Number (C), Enable Hard Addressing (H), Tagged Command (T), Unique World Wide Name (UWN)
10	HP / DEC Alpha Server (Tru64 UNIX 4.0x) ¹ , HP / DEC Alpha Server (Tru64 UNIX 4.0x) ³	Enable Point-to-point (PP), Tagged Command (T), Unique World Wide Name (UWN)
11	HP / DEC Alpha Server (Tru64 UNIX 5.x), HP / DEC Alpha Server (Tru64 UNIX 5.x) ² , HP / DEC Alpha Server (Tru64 UNIX 5.x) ⁴ , HP / DEC Alpha Server (Tru64 UNIX 5.x) ^{31, 32}	Enable Point-to-point (PP), Open VMS 7.2-1 (OVMS), Tagged Command (T), Unique World Wide Name (UWN)
12	HP / DEC OpenVMS 7.2- ¹⁵	Enable Point-to-point (PP), Open VMS 7.2-1 (OVMS), SCSI 3 (SC3), Tagged Command (T), Unique World Wide Name (UWN)
13	HP-UX, HP-UX ¹⁶ , HP-UX ^{16, 17} , HP-UX ^{16, 18} , HP-UX ^{16, 19} , HP-UX ^{16, 20}	Common Serial Number (C), Common Serial Number (C) ¹¹ , Enable Hard Addressing (H), Enable Point-to-point (PP), Enable Volume Set Addressing (V), Global Third Party Logout (TP), Port as Disk Array (A), Tagged Command (T), Unique World Wide Name (UWN)
14	IBM AIX with EMC Fibre Channel Interface	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹⁴ , Disable Queue Reset on Unit Attention (D) ¹⁵ , Enable Hard Addressing (H), Enable Point-to-point (PP), Return BUSY on ABORT (B), Tagged Command (T), Unique World Wide Name (UWN)
15	IBM AIX with FC 6227, 6228	Disable Queue Reset on Unit Attention (D) ¹⁵ , Enable Hard Addressing (H), Enable Point-to-point (PP), SCSI 3 (SC3), Tagged Command (T), Unique World Wide Name (UWN)
16	Linux, Linux ^{12, 13}	Common Serial Number (C) ¹¹ , Enable Fibrepath on this Port (VCM) ⁹ , Enable Hard Addressing (H), Enable Point-to-point (PP), Tagged Command (T), Unique World Wide Name (UWN)
17	Novell Netware, Novell Netware ²⁴ , Novell Netware ^{24, 25} , Novell Netware ²⁵ , Novell Netware ^{25, 27}	Disable Queue Reset on Unit Attention (D) ²⁶ , Enable Hard Addressing (H), Enable Point-to-point (PP), Tagged Command (T), Unique World Wide Name (UWN)
18	SCO UNIXWare	Enable Fibrepath on this Port (VCM) ⁹ , Enable Hard Addressing (H), Enable Point-to-point (PP), Tagged Command (T), Unique World Wide Name (UWN)
19	Sequent NUMA-Q (DYNIX 4.4.4+, 4.5.0+)	Common Serial Number (C), Enable Point-to-point (PP), Enable Volume Set Addressing (V), Environment Reports to Host (E) ⁶ , Port as Disk Array (A), Sequent Host (SEQ), Tagged Command (T), Unique World Wide Name (UWN)
20	Sequent NUMA-Q (DYNIX 4.5.0+)	Common Serial Number (C), Enable Hard Addressing (H), Environment Reports to Host (E) ⁶ , Sequent Host (SEQ), Tagged Command (T), Unique World Wide Name (UWN)
21	SGI Origin	Class II Service (C2S), Enable Hard Addressing (H), Enable Point-to-point (PP), Tagged Command (T), Unique World Wide Name (UWN)
22	Sun	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹⁴ , Common Serial Number (C) ^{28, 29, 30} , Disable Queue Reset on Unit Attention (D) ^{15, 28, 29, 30} , Enable Hard Addressing (H), Enable Point-to-point (PP), Enable Sunapee (SCL) ³⁰ , Tagged Command (T), Unique World Wide Name (UWN)
23	VERITAS Cluster Server (VCS), EMC GeoSpan for VCS	Common Serial Number (C) ⁷ , Disable Queue Reset on Unit Attention (D) ⁸ , Enable Hard Addressing (H), Enable Point-to-point (PP), Tagged Command (T)
24	Windows NT / 2000, Windows NT / 2000 ²¹	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹⁴ , Common Serial Number (C) ¹¹ , Disable Queue Reset on Unit Attention (D) ²³ , Enable Hard Addressing (H), Enable Point-to-point (PP), Enable Volume Set Addressing (V) ²² , Port as Disk Array (A) ²² , Tagged Command (T), Unique World Wide Name (UWN)

1. **Tru64 V4.0F BL13 Patch Kit 2 may introduce problems with KZPBA adapters. Tru64 V4.0F latest qualified Patch Kit 8 (DUV40FB22AS0008-20030730).**
2. Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).
3. **Tru64 V4.0G latest qualified Patch Kit 4 (T64V40GB22AS0004-20030731).**
4. **Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).**
5. OpenVMS 7.2-1, 7.2-1H1 FC-SW requires console firmware 5.6 or later and patch VMS721_fibre_SCSI-V0400. Available from <http://ftp1.support.compaq.com/public/>
6. E bit - Optional.
7. C Bit with Veritas DMP.
8. D Bit is not required for VCS 2.0 or later.
9. VCM for Volume Logix configurations only
10. Requires OV/K/0041.3
11. C Bit required for VERITAS VxVM DMP functionality.
12. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPO.
13. Supported with QLogic driver v6.05.00.
14. A4S bit when sharing AS/400 drives on this port (direct connect only).
15. D Bit with PowerPath.
16. For HP-UX systems only:LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
17. Requires HP-UX 11.0 Extension Pack release May 1999 or equivalent.
18. Symmetrix microcode supported:5266.40.28 or higher, 5566.41.28 or higher, 5267.27.19 or higher, 5567.34.19 or higher.
19. Requires HP-UX 11.0 General Release patch bundle XSWGR1100 B.11.00.47.05 released November 1999 or equivalent.
20. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
21. EMC recommends that HBAs of different vendors not be used in the same host server.
22. A + V bits for Tachlite (D8602A)
23. D Bit - Optional with PowerPath
24. **NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.**
25. Maximum number of NWFS volumes that can be mounted is 64.
26. D Bit with Cluster.
27. Requires NWPA.NLM V.3.07A update from Novell website.
28. C + D Bits with Veritas DMP.
29. Enabling the D-bit for DMP is recommended but not required for VxVM 3.1 and higher. The D-bit is not required for VxVM 3.1 and higher.
30. C + D + SCL Bits with SUN Cluster 1.x, 2.x.
31. V5.x:255 LUNs/Symmetrix Fibre director port (LUNs 001-0FE valid) Symmetrix 8000 Series only, OVMS director flag required (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, LUN 000 is not usable by Tru64 host.
32. **Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).**
33. **FSC requires that all patches for Solaris 9 be obtained through FSC in the form of a Solaris 9 PTF patch CD. The current patch CD is Solaris 9 PTF R03111.**

SCSI Bit Settings

5568 Settings

There are no specific director bit settings required for iSCSI except the VCM bit with the following condition: VCM bit is required to enable Volume Logix functionality and for Challenge Handshake Authentication Protocol (CHAP).

No.	Operating Environment	Bits to Set
1	AS/400, AS/400 ²⁸	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ²⁹ , Avoid Reset Broadcast (ARB), Negotiate Reset (N), Set QERR (Z)
2	Bull Escala / AIX	Disable Queue Reset on Unit Attention (D) ^{3, 4} , SCSI 3 (SC3) ¹⁰
3	Data General AViiON 2800, 4900.5500, 3700R	Disable Queue Reset on Unit Attention (D) ⁶
4	EMC Celerra	Avoid Reset Broadcast (ARB)
5	FSC & Fulltime	Disable Queue Reset on Unit Attention (D)
6	FSC PRIMEPOWER (GP7000F) Series Host, FSC PRIMEPOWER (GP7000F) Series Host ⁸⁸	Common Serial Number (C) ⁷ , Disable Queue Reset on Unit Attention (D), Negotiate Reset (N) ⁹
7	FSC RM400(C/E)/600E	Disable Queue Reset on Unit Attention (D), Enable Siemens Hosts Rm/400 - Rm/600 (S), Environment Reports to Host (E)
8	HP / DEC Alpha Server (Tru64 UNIX 4.0x, 5.x), HP / DEC Alpha Server (Tru64 UNIX 4.0x, 5.x) ¹ , HP / DEC Alpha Server (Tru64 UNIX 4.0x, 5.x) ^{36, 37} , HP / DEC Alpha Server (Tru64 UNIX 4.0x, 5.x) ⁵	Common Serial Number (C) ² , Disable Queue Reset on Unit Attention (D) ^{3, 4}
9	HP / DEC OpenVMS Clusters, HP / DEC OpenVMS Clusters ²⁶ , HP / DEC OpenVMS Clusters ²⁷ , HP / DEC OpenVMS Clusters ³¹ , HP / DEC OpenVMS Clusters ³²	Avoid Reset Broadcast (ARB) ²⁵
10	HP 9000, HP 9000 ¹¹ , HP 9000 ^{11, 13} , HP 9000 ^{11, 14} , HP 9000 ^{11, 15} , HP 9000 ^{11, 16}	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹² , Common Serial Number (C)
11	HP e3000	Environment Reports to Host (E)
12	Linux	Common Serial Number (C) ¹⁸ , Linked Commands (L), Synchronous Transaction (Y), Tagged Command (T), Wide Transaction (W)
13	NCR MPRAS / Windows NT, NCR MPRAS / Windows NT ¹⁷ , NCR MPRAS / Windows NT ³⁰	Disable Queue Reset on Unit Attention (D) ¹⁹ , Environment Reports to Host (E) ²⁰
14	NCR Teradata and Empath	Disable Queue Reset on Unit Attention (D), Environment Reports to Host (E)
15	Novell Netware, Novell Netware ²¹ , Novell Netware ^{21, 22} , Novell Netware ²² , Novell Netware ^{22, 24}	Disable Queue Reset on Unit Attention (D) ²³
16	Sequent Symmetry / NUMA-Q (DYNIX/ptx 4.4.x & 4.5.x)	Common Serial Number (C), Environment Reports to Host (E), Sequent Host (SEQ)
17	Sun	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹² , Common Serial Number (C) ^{33, 34, 35} , Disable Queue Reset on Unit Attention (D) ^{3, 4} , Enable Sunapee (SCL), Negotiate Reset (N) ⁹
18	VERITAS First Watch (VFW), VERITAS Cluster Server (VCS), EMC GeoSpan for VCS	Common Serial Number (C) ⁷ , Disable Queue Reset on Unit Attention (D) ⁸
19	Windows NT / 2000, Windows NT / 2000 ¹⁷	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹² , Common Serial Number (C) ¹⁸ , Disable Queue Reset on Unit Attention (D) ^{3, 4}

1. Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).

2. C Bit with Multi-path.
3. Sites with PowerPath 2.0 or later already running with the D-bit enabled do not require the D-bit to be disabled.
4. D Bit required with PowerPath 1.5.x or earlier.
5. **Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).**
6. D Bit with MPIO.
7. C Bit with Veritas DMP.
8. D Bit is not required for VCS 2.0 or later.
9. N-Bit with PCI SCSI.
10. SC3 Bit allows use of LUNS 0-F.
11. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
12. A4S bit when sharing AS/400 drives on this port.
13. Requires HP-UX 11.0 Extension Pack release May 1999 or equivalent.
14. Symmetrix microcode supported: 5266.40.28 or higher, 5566.41.28 or higher, 5267.27.19 or higher, 5567.34.19 or higher.
15. Requires HP-UX 11.0 General Release patch bundle XSWGR1100 B.11.00.47.05 released November 1999 or equivalent.
16. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
17. EMC recommends that HBAs of different vendors not be used in the same host server.
18. C Bit required for VERITAS VxVM DMP functionality.
19. D Bit for multiple vendor platforms; if only NCR hosts, set IMPL flag A010.
20. E Bit: if Windows NT OS is used with TNT, set the FBA Environmental Sense key to 4, else set it to 6.
21. **NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.**
22. Maximum number of NWFS volumes that can be mounted is 64.
23. D Bit with Cluster.
24. Requires NWPA.NLM V.3.07A update from Novell website.
25. ARB Bit only with OpenVMS SCSI Cluster.
26. Open VMS 7.1-2 requires console firmware 5.6 or later and patch VMS712_SC3I-V0300.
27. OpenVMS 7.2-1, 7.2-1H1 FC-SW requires console firmware 5.6 or later and patch VMS721_fibre_SC3I-V0400. Available from <http://ftp1.support.compaq.com/public/>
28. Subject to IBMs limitations per host model.
29. A4S Bit when using DataBase Extractor. Set this bit on target host port (not on As/400 port).
30. Limited support available for MPARS 3.01.
31. Open VMS 7.3 FC-SW requires console firmware 5.6 or later and patch VMS73_update-V0100 or patch VMS73_fibre_SC3I-V0200.
32. Open VMS 7.2-2 FC-SW requires console firmware 5.6 or later and patch VMS722_fibre_SC3I-V0100.
33. C + D Bits with Veritas DMP.
34. C + D + SCL Bits with SUN Cluster 1.x, 2.x.
35. Enabling the D-bit for DMP is recommended but not required for VxVM 3.1 and higher.
36. V5.x:255 LUNs/Symmetrix Fibre director port (LUNs 001-0FE valid) Symmetrix 8000 Series only, OVMS director flag required (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, LUN 000 is not usable by Tru64 host.
37. **Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).**
38. **FSC requires that all patches for Solaris 9 be obtained through FSC in the form of a Solaris 9 PTF patch CD. The current patch CD is Solaris 9 PTF R03111.**

7. **Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).**
8. ARB Bit only with OpenVMS SCSI Cluster.
9. D Bit with MPIO.
10. Q Bit for cluster configurations only.
11. C Bit with Veritas DMP.
12. D Bit is not required for VCS 2.0 or later.
13. N-Bit with PCI SCSI.
14. Requires OV/K/0041.3
15. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPO.
16. Supported with QLogic driver v6.05.00.
17. C Bit required for VERITAS VxVM DMP functionality.
18. SC3 Bit allows use of LUNS 0-F.
19. For HP-UX systems only:LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
20. A4S bit when sharing AS/400 drives on this port.
21. Requires HP-UX 11.0 Extension Pack release May 1999 or equivalent.
22. Symmetrix microcode supported:5266.40.28 or higher, 5566.41.28 or higher, 5267.27.19 or higher, 5567.34.19 or higher.
23. Requires HP-UX 11.0 General Release patch bundle XSWGR1100 B.11.00.47.05 released November 1999 or equivalent.
24. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
25. EMC recommends that HBAs of different vendors not be used in the same host server.
26. D Bit for multiple vendor platforms; if only NCR hosts, set IMPL flag A010.
27. E Bit: if Windows NT OS is used with TNT, set the FBA Environmental Sense key to 4, else set it to 6.
28. **NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.**
29. Maximum number of NWFS volumes that can be mounted is 64.
30. D Bit with Cluster.
31. Requires NWPA.NLM V.3.07A update from Novell website.
32. Subject to IBMs limitations per host model.
33. A4S Bit when using DataBase Extractor. Set this bit on target host port (not on As/400 port).
34. Limited support available for MPARS 3.01.
35. C + D + SCL Bits with SUN Cluster 1.x, 2.x.
36. C + D Bits with Veritas DMP.
37. Enabling the D-bit for DMP is recommended but not required for VxVM 3.1 and higher.
38. Set IMPL flat A010.
39. V5.x:255 LUNs/Symmetrix Fibre director port (LUNs 001-0FE valid) Symmetrix 8000 Series only, OVMS director flag required (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, LUN 000 is not usable by Tru64 host.
40. **Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).**
41. **FSC requires that all patches for Solaris 9 be obtained through FSC in the form of a Solaris 9 PTF patch CD. The current patch CD is Solaris 9 PTF R03111.**

5x66 Settings

There are no specific director bit settings required for iSCSI except the VCM bit with the following condition: VCM bit is required to enable Volume Logix functionality and for Challenge Handshake Authentication Protocol (CHAP).

20	Windows NT / 2000, Windows NT / 2000 ²⁶	AS/400 Secondary Port (Used from UNIX host to view AS/400 devices.) (A4S) ¹⁸ , Common Serial Number (C) ²⁷ , Disable Queue Reset on Unit Attention (D) ¹⁵ , Linked Commands (L), Synchronous Transaction (Y), Tagged Command (T), Wide Transaction (W)

1. Tru64 V4.0F BL13 Patch Kit 2 may introduce problems with KZPBA adapters. Tru64 V4.0F latest qualified Patch Kit 8 (DUV40FB22AS0008-20030730).
2. D Bit with PowerPath Tru64 UNIX.
3. Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).
4. Tru64 V4.0G latest qualified Patch Kit 4 (T64V40GB22AS0004-20030731).
5. Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).
6. D Bit with MPIO.

7. Turn the C-bit on for NEW installs only. *Do not change it if there is live data on the box. *Do not change the Serial Number in the SiteInfo file or change any existing volume numbers, SA numbers or Director Port numbers. The System keeps track of the volume serial numbers. No block moves allowed.
8. E bit - Optional.
9. Q Bit for cluster configurations only.
10. C + D Bits with Veritas DMP.
11. D Bit is not required for VCS 2.0 or later.
12. Requires OV/K/0041.3
13. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
14. Supported with QLogic driver v6.05.00.
15. D Bit with PowerPath.
16. SC3 Bit allows use of LUNS 0-F at 5265.25.17 and AIX 4.3.2 and above.
17. For HP-UX systems only:LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
18. A4S bit when sharing AS/400 drives on this port.
19. D Bit with Power Path in non HA environments.
20. No D Bit required at PowerPath 1.5+.
21. Requires HP-UX 11.0 Extension Pack release May 1999 or equivalent.
22. Symmetrix microcode supported:5266.40.28 or higher, 5566.41.28 or higher, 5267.27.19 or higher, 5567.34.19 or higher.
23. Requires HP-UX 11.0 General Release patch bundle XSWGRI1100 B.11.00.47.05 released November 1999 or equivalent.
24. Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
25. E Bit with MPE/ix 5.5, 6.0, 6.5, 6.5.02.
26. EMC recommends that HBAs of different vendors not be used in the same host server.
27. C Bit required for VERITAS VxVM DMP functionality.
28. **NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.**
29. Maximum number of NWFS volumes that can be mounted is 64.
30. D Bit with Cluster.
31. Requires NWPANLM V.3.07A update from Novell website.
32. ARB Bit only with OpenVMS SCSI Cluster.
33. Open VMS 7.1-2 requires console firmware 5.6 or later and patch VMS712_SCSI-V0300.
34. OpenVMS 7.2-1, 7.2-1H1 FC-SW requires console firmware 5.6 or later and patch VMS721_fibre_SCSI-V0400. Available from <http://ftp1.support.compaq.com/public/>
35. Subject to IBMs limitations per host model.
36. Limited support available for MPARS 3.01.
37. Open VMS 7.3 FC-SW requires console firmware 5.6 or later and patch VMS73_update-V0100 or patch VMS73_fibre_SCSI-V0200.
38. Open VMS 7.2-2 FC-SW requires console firmware 5.6 or later and patch VMS722_fibre_SCSI-V0100.
39. Enabling the D-bit for DMP is recommended but not required for VxVM 3.1 and higher.
40. N-Bit with PCI SCSI.
41. V5.x:255 LUNs/Symmetrix Fibre director port (LUNs 001-0FE valid) Symmetrix 8000 Series only, OVMS director flag required (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, LUN 000 is not usable by Tru64 host.
42. **Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).**

Symmetrix DMX Series

Base Connectivity

EMC has qualified the following hosts. No other hosts are supported at this time. Symmetrix models and minimum Engenuity revisions are listed in the footnotes on most tables. EMC supports Symmetrix configured as a boot device for the servers listed below, provided that these requirements are followed. The purpose of these requirements is primarily to ensure the best possible response times for boot/root/swap volumes. For qualified configurations, Where possible, EMC recommends an alternate mirrored boot volume be configured.1. Spindles can be shared on Symm4 or later units only.2. Spindles can be shared if they are larger than 9GB in size.3. For Symmetrix 3000 and 5000 systems, the maximum number of Symmetrix logical volumes per Symmetrix boot port is 32. For Symmetrix 8000 and DMX systems, the following guidelines and recommendations must be adhered to. When using a SAN for boot/swap/page device the operation and performance of the server might be affected by external events that might cause the storage device not to be immediately accessible for periods of time. These events might result in slow response times as observed by the operating system and longer boot times. In some cases it can cause the server to crash (please see comments below for W2K/NT).

EMC recommends designing the distribution and mapping of the boot devices on the SAN in a way that will:

- Minimize the number of components between the server and the boot storage device.
- Will not present a load that will exceed the limits of the SAN. Below are some issues that must be considered when designing your SAN. Please refer to EMC Networked Storage Topology Guide ("Networked Storage Design Considerations/Fabric Design Practices" section) for a complete discussion on the topic.
- Sufficient bandwidth on the link between the switch and the storage port
- Sufficient ISLs in case where boot device and server are more than one hop apart
- ISL utilization

Events that could affect the availability of an external storage device:

Fibre Channel and SCSI environments:

- Lost connection to external storage (pulled or damaged external Fibre/SCSI cable connection).
- External storage service/upgrade procedures such as in some cases, online microcode upgrades and/or configuration changes.
- External storage director failures including failed lasers on Fibre Channel directors.
- External storage power failure.
- HBA failures.

Fibre Channel environment only:

- Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements.4. Boot/root and swap from a single host can be on the same channel.5. The boot disk should be high SCSI priority, e.g. SCSI TID 6 (0-7, 8-15: higher priority TID is 7, lowest is 8).6. A dedicated SA or FA is not required for boot devices.7. The Internal Host Boot Device may be mirrored with the External Symmetrix Boot Device to allow redundant pathing. Does not apply to Microsoft Windows.8. The Boot path must not include a hub in the topology.9. The maximum number of boot devices per port is equal to Fanout values listed in Fibre Channel Connectivity table.

1	AViiON: AV1400, AV20000, AV25000, AV35000, AV3704, AV3704R, AV3750, AV3800, AV8900, AV8950	PCI	DG DG/UX R4.20MU07 ²	Emulex LP8000-F1 ^{3, 4}	FC-AL, FC-SW	N	See ¹

1. For more information see <http://athena.europe.dg.com>
2. The release notice for DG/UX (included with the software release at path: "/usr/release/dgux*.rn) lists supported platforms.
3. DG/UX automatically loads the firmware and BIOS onto the Emulex HBA during boot-up as needed.
4. Only the Brocade FC switch connection is supported. Connectrix FC switch is not supported.

EMC NAS

EMC

EMC – EMC NAS						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
1	Celerra File Server Control Station CS-507 Series ²	PCI	EMC NAS: 5.1.15, 5.1.18, 5.1.19, 5.1.9	EMC 201-712-900 ¹	FC-SW	N
2	Celerra File Server Data Mover DM7 Series	PCI	EMC NAS: 5.1.15, 5.1.18, 5.1.19, 5.1.9	EMC 250-736-900 ¹	FC-SW	N
3	Celerra File Server Data Mover DM 510 Series	PCI	EMC NAS: 5.1.15, 5.1.18, 5.1.19, 5.1.9	EMC: 250-734-902 ⁴ , 250-735-900 ^{1, 3}	FC-SW	N

1. Host Adapter Card is not field-replaceable.
2. A SCSI-based Control Station cannot be mixed with a Fibre Channel-based Control Station in a Celerra Cabinet. A SCSI Control Station-based Celerra cannot be upgraded to a Fibre Channel Control Station-based Celerra.
3. This HBA is for connecting to a disk array.
4. This HBA is for connecting to a Tape Library unit.

Egenera BladeFrame

Egenera

Egenera – Egenera BladeFrame						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
1	BladeFrame cBlade-EP ⁴	PCI-X	Egenera BladeFrame 3.0 ^{1, 2}	QLogic QLA2342-E-SP ^{3, 5, 6, 7}	FC-AL, FC-SW	Y

1. Maximum of 423 LUNs are supported per BladeFrame.
2. pBlades are qualified with RedHat 2.1 Advanced Server v2.4.9-e.12, v2.4.9-e.16 and v2.4.9-e.25.
3. Supported with v4.47.18e QLogic driver included cBlade OS, BladeFrame 3.0, and BIOS v1.34.
4. PowerPath is not supported on Egenera. Egenera multi-pathing is supported on both Symmetrix and CLARiiON storage arrays.
5. Driver Version 4.47.18e5.
6. Firmware Version 3.01.13.
7. FCode value 1.34.

1. A500/550 requires minimum PDC 40.32 or higher.

2. Only PowerPath 3.0.1 is supported for DMX series systems

3. FC–AL supported for direct attach only. No support for hubs or Quickloop at this time

4. The Brocade (Brocade, EMC, or HP models) switch port the HBA involved in a FC–SW topology boot process or FC–SW topology dump process is attached to, is required to be locked as G port when the boot or dump volume resides on the Symmetrix. This can be accomplished by executing the "portCfgGport port_number,1" command from a telnet session on the Brocade switch. The boot device can not be located more than two hops from the initiator involved in the boot process.

5. For direct attached FC–AL boot or dump from a Symmetrix FA port configured for 2 Gbit speed, the Symmetrix auto–negotiation director flag must also be enabled on the FA port. FC–SW 2–Gbit boot and/or dump using A6795A requires Auto–Negotiation flag to be enabled on the switch port the HBA is attached to.

6. PDC firmware 42.09 or higher: Arbitrated Loop (direct attach) or FC–SW

7. Brocade 12000 and EMC ED–12000B Minimum firmware revision 4.0.2a to support boot.

8. For HP–UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC Symmetrix devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange –r N /dev/vg01/ivol1 or lvcreate –r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror–UX, then this flag should not be set. No additional patches are required for this option in HP–UX 11.0, HP–UX 11.11 and forward, however in HP–UX 10.x the "N" flag option was introduced with the following

- patches are required to be installed or patches which supercede or replace these in order to configured the logical volumes residing on Symmetrix devices in this manner: For all HP/UX 10.xx versions install the following Bad Block Reallocation Patch Pair: 10.01: PHKL_11294, PHKL_11890, PHCO_11288 (patches may be superseded or have co-dependencies as defined by HP). 10.10: PHKL_11816, PHCO_11817 (patches may be superseded or have co-dependencies as defined by HP). 10.20: PHKL_11086, PHKL_11903, PHCO_10964 (patches may be superseded or have co-dependencies as defined by HP).
9. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
 10. Symm 6 is qualified with: HP-UX 11i Support Plus Sept '02 bundle = GOLDAPPS11i June '02, GOLDBASE11i June '02 & HWENABLE11i Sept '02.
 11. HP-UX 11.0 switched fabric support is enabled with: fabric device driver version B.11.00.03 and higher; minimum operating system level HP/UX 11.0 990P with March 2000 HW-CR bundle and dependency patch PHKL_21381 patches may be superseded or have co-dependencies as defined by HP. Symmetrix microcode versions: 5265.49.31, 5266.20, 5566.22 or latest Symmetrix microcode versions.
 12. FC-AL and FC-SW topologies can co-exist on the same server but not on the same HBA, provided that the different topologies are attached to different HBAs
 13. HP A5158A FC-SW software requirements: FC-AL and FC-SW requires the HP A5158A Tachlite PCI Fibre Channel Adapter. The A5158A FCSW software fabric driver version "AP0301", for HP-UX 11i is now available for download from HP's software depot site, <http://www.software.hp.com> under "drivers". It is referred to as the "hp pci tachyon tl fibre channel adapter", and requires the installation of dependent patch PHKL_22874 prior to installing the fabric driver, patches may be superseded or have co-dependencies as defined by HP.
 14. Minimum driver version for SNIA HBA API support with HP-UX 11.0 is B.11.00.10. Minimum driver version for SNIA HBA API support with HP-UX 11.11 is B.11.11.09.
 15. Driver Version 11.11.09.
 16. As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.
 - L1000 (product number A5576A)
 - L2000 (product number A5191A)
 - N4000 Revision A (product number A3639A)
 - N4000 Revision B (product number A3639B)
 17. The A6795A HBA is capable of supporting both 1 and 2 Gb speeds.
 18. Auto-sensing capability on the HBA is permanently enabled. There is no option to disable auto-sensing on the HBA.
 19. HP-UX required patches: HP-UX 11.0 ACE: PHKL_23939, HP-UX 11i: PHKL_23626
 20. L-Class requires minimum PDC firmware 40.26 or higher.
 21. FC-AL supported for direct attach only. No support for hubs or Quackloop at this time
 22. Virtual Partitions (VPAR) is supported on the L-class/rp5470 server. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 41.02 or later.
 23. VPARS supported in boot environment with HBA supported defined in Base Connectivity table.
 24. PDC firmware 41.39 or higher; Arbitrated Loop (direct attach) or FC-SW
 25. rp5405, rp5430, rp5470, rp7400: (PA-8700 processors): Initial support with HP-UX 11.0 Sept 2001, 11i Sept 2001.
 26. HP A5158A FC-SW software requirement: FC-AL and FC-SW requires the HP A5158A Tachlite PCI Fibre Channel Adapter. The A5158A FC-SW software fabric driver version "AP0301", for HP-UX 11i is now available for download from HP's software depot site, <http://www.software.hp.com> under "drivers". It is referred to as the "hp pci tachyon tl fibre channel adapter", and requires the installation of dependent patch PHKL_22874 prior to installing the fabric driver, patches may be superseded or have co-dependencies as defined by HP.
 27. FC-AL, FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
 28. PDC firmware: Arbitrated Loop (direct attach): use 40.19 or higher; Fabric: use 40.26 or higher
 29. The A6795A HBA is capable of supporting both 1 and 2 Gb speeds. QuickLoop is not supported with Brocade 3200/3800/12000 or EMC DS-16B2, ED-12000B.
 30. rp5405, rp5430, rp5470, rp7400: (PA-8700 processors): Initial support with HP-UX 11.0 Sept 2001, 11i Sept 2001. Symmetrix microcode supported: 5266.40.28 or higher. 5566.41.28 or higher. 5267.27.19 or higher. 5567.34.19 or higher.
 31. HP A5158A FC-SW is enabled in the March 2000 HWCR bundle XSWHWCR1100.48. Additional patches may be required for support.
 32. rp5430/5470 requires minimum PDC firmware 41.36 or higher.
 33. PA-8700 processors: Supports both 11.00 and HP-UX 11i processor 8700+ only supports HP-UX 11i.
 34. rp5430/5470 required minimum PDC firmware 41.46 or higher.
 35. PA-8700 processors: Initial support with HP-UX 11.0 Sept 2001, HP-UX 11i Sept 2001.
 36. Minimum driver revision for HP-UX 11i v1.0 (HP-UX 11.11) is PCI/HSC Fibre Channel Driver B.11.11.09. In a (Vpar) environment.
 37. Requires minimum PDC firmware for N-class 40.25 or higher. The rp7400 (PA-8700) requires minimum PDC firmware 41.36 or higher.
 38. Virtual Partitions (VPAR) is supported on the N-class/rp7400 server with 4.x and 5.x Symmetrix models and DMX series. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later.
 39. rp7400 requires minimum PDC firmware 41.36 or higher.
 40. N-Class: Arbitrated loop boot with PDC rev 40.04 or higher. Fabric boot with PDC rev 40.25 or higher.
 41. These qualified HBAs for EMC Symmetrix storage in the HP9000 server model and the HP-UX revision installed may co-exist in that same server or the same hard partition. Other supported HBAs not used to attach to the Symmetrix may also co-exist on the same server unless specified by EMC and/or HP.
 42. Minimum driver revision for HP-UX 11i v1.0 (HP-UX 11.11) is PCI/HSC Fibre Channel Driver B.11.11.09.
 43. rp7400 (PA-8700), rp5470 (PA-8700): initial support with HP-UX 11.0 Sept 2001, 11i Sept 2001.
 44. For rp7405 and rp7410 required minimum PDC firmware is 15.005
 45. Virtual Partitions (VPAR) is supported on the N-class/rp7400 server. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later.
 46. Requires PDC firmware N-Class 41.96
 47. Requires PDC firmware rp7400 (PA-8700) requires PDC firmware 41.36.
 48. Requires minimum PDC firmware 35.4 and PDHC 7.3 or higher
 49. Virtual Partitions (VPAR) is supported on the SuperDome server with 4.x and 5.x Symmetrix models and DMX series. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.02.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 36.1 or later.
 50. Requires minimum PDC firmware 35.4 and PDHC 7.8 or higher
 51. Requires PDC firmware TSSW 5.3.
 52. Arbitrated loop boot and fabric boot with PDC rev TSSW 5.3 or higher.
 53. Arbitrated loop boot with PDC rev TSSW 3.1 or higher. Fabric boot with PDC rev TSSW 3.2 or higher.
 54. Requires PDC firmware TSSW 3.2 or higher
 55. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC Symmetrix devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
 56. D390, R390 require minimum PDC firmware 41.35 or higher.
 57. HP-UX 11.0 Sept 2002
 58. 512 lun limit per FA port
 59. HP-UX 11i v1.0 (HP-UX 11.11) Sept 2002
 60. FC-AL topology attaches to DMX supported with direct attach only
 61. Dx90, Rx90 servers support a maximum of 2 A6684A HBAs. The first must be installed in the turbo slot 10/12 and the second in any HSC slot.
 62. Requires PDC firmware 41.33 or higher
 63. The A6685A is not supported in slots 10/0 and 10/8 of the K570 and K580. In the K570 and K580, there are restrictions for the number of A6685A HBA cards supported when graphics cards are installed.
 64. Requires PDC firmware 41.34 or higher
 65. Dx90, Rx90 require minimum PDC firmware 41.35 or higher.
 66. Required dependent FCMS patches are required (patches may be superseded or have co-dependencies as defined by HP): HP-UX 11.0, PHKL_21834 HP-UX 11i: PHKL_23626. NOTE: These patches must be installed before installing the driver, available at <http://us-support2.external.hp.com>, HSC Tachlite driver available at <http://www.software.hp.com>, under "drivers" and locate Fibre Channel HSC Tachlite adapter (A6684A or A6685A). For HP-UX 11i, the driver is under "hp tachyon tl fibre channel adapter" which enables support for A6684A/A6685A/A5158A.
 67. HP-UX 11.00 minimum driver revision B.11.00.06.
HP-UX 11i minimum driver revision B.11.11.06.
 68. Driver Version 11.00.10.
 69. Symm 6 is qualified with: HP-UX 11.00 Support Plus Sept '02 bundle = QPK1100 Sept '02 & HWE1100 Sept '02
 70. HP-UX 11.0 switched fabric support is enabled with: fabric device driver version B.11.00.03 and higher; minimum operating system level HP/UX 11.0 990P with March 2000 HW-CR bundle and dependency patch PHKL_21381 patches may be superseded or have co-dependencies as defined by HP.
 71. Requires minimum PDC firmware 42.03 or higher.
 72. FCAL on Symm 6 supported by direct attach only
 73. Symm6: 512 lun limit per FA port
 74. For driver versions refer to Base Connectivity Section
 75. Requires PDC firmware 41.28
 76. Requires minimum PDC firmware 42.06 or higher
 77. PDC firmware 41.39 or later
 78. Requires minimum PDC firmware 42.06.

79. Requires minimum PDC firmware 41.46 or higher
 80. PDC firmware: V2200, 2250: Arbitrated loop and fabric, use TSSW 5.3 or higher. V2500, 2600: Arbitrated loop, use TSSW 3.1 or higher. Fabric, use TSSW 3.2 or higher.
 81. Requires minimum PDC firmware 41.34 or higher.
 82. HP-UX 11.0 minimum driver revision B.11.00.06. HP-UX 11i minimum driver revision B.11.11.06.
 83. Requires minimum PDC firmware 41.34 or higher
 84. Dx90, Rx90 require minimum PDC firmware 41.35 or higher to support boot.
 85. Requires Minimum Symmetrix microcode 5669.46.24 or 5670.23.25.
 86. Driver Version 11.11.01.
 87. Firmware Version 3.02.162.
 88. Required Patch PHKL_28569, PHKL_26938 and 2port 2Gig driver version 11.11.01.
 89. Host must be configured as a 64Bit operating system.
 90. rp7410 requires minimum PDC firmware 16.009 or higher.
 91. PDC firmware 15.05 or higher; Arbitrated Loop (direct attach) or FC-SW
 92. **Virtual Partitions (VPAR) is supported on the rp8400 server with 4.x and 5.x Symmetrix models and DMX Series. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, system firmware 4.0 or later, PDC firmware 16.009 or later.**
 93. HP-UX 11i v2.0 (HP-UX 11.23) is a IA-64 release and only runs on the HP Integrity rx family server.
 94. Driver Version 11.23.01.
 95. The A6795A EFI driver must be upgraded to version 1.09 to support boot.
 96. Minimum microcode revision level 5670.23.25. 5568 and 5669 are on a RPQ basis at this time.
 97. Driver Version 1.01a9. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
 98. Firmware Version 1.01a2.

1. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
 2. FC-AL, FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
 3. Driver Version 11.00.10.
 4. Minimum OS revision is HP-UX 11.0 990P.
 5. Arbitrated loop boot with PDC rev TSSW 3.1 or higher. Fabric boot with PDC rev TSSW 3.2 or higher.
 6. FC-AL topology attaches to DMX supported with direct attach only
 7. 512 lun limit per FA port
 8. Driver Version 11.11.09.
 9. PDC firmware: Arbitrated Loop (direct attach): use 40.19 or higher; Fabric: use 40.26 or higher
 10. HP-UX driver requirements: HP-UX 11.0 : A6684A/A6685A/A5158A/A6795A HP PCI Tachyon TL/XL2 Fibre Channel driver B.11.00.10 or later release which supports this HBA.
 11. The A6795A HBA is capable of supporting both 1 and 2 Gb speeds. QuickLoop is not supported with Brocade 3200/3800/12000 or EMC DS-16B2, ED-12000B.
 12. As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)
 L2000 (product number A5191A)
 N4000 Revision A (product number A3639A)
 N4000 Revision B (product number A3639B)

13. Auto-sensing capability on the HBA is permanently enabled. There is no option to disable auto-sensing on the HBA.
 14. PDC firmware: Arbitrated loop and fabric, use 40.32 or higher.
 15. Requires minimum PDC firmware 32.2 and PDHC 7.3 or higher
 16. rp8400 requires minimum PDC firmware 13.10 or higher.

1. Requires Fibre Channel switch. Refer to Fibre Channel Connectivity – HPQ sections for connectivity details.
2. Minimum AlphaServer SRM console firmware V6.0 required for boot device support.
3. V5.x: 255 LUNs/Symmetrix Fibre director port (LUNs 000–0FE valid) on Symmetrix DMX Series, requires OVMS director bit setting, LUN 000 must be mapped to a Symmetrix device, the LUN 000 device can be used as a normal disk device by the Tru64 host.
4. Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003–20030929).
5. Firmware Version 3.91A1.
6. Latest qualified Alpha Systems firmware is V6.5.
7. Firmware Version 3.20x7.

8. Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).
9. Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).
10. AlphaServer GS1280,ES80,ES47: Minimum Tru64 V5.1B with Patch Kit 1 (T64V51BB1AS0001-20021229)
11. Requires RPK
12. AlphaServer SC systems have special Tru64 UNIX operating system and AlphaServer SC System Software requirements.
13. Tru64 V4.0F BL13 Patch Kit 2 may introduce problems with KZPBA adapters. Tru64 V4.0F latest qualified Patch Kit 8 (DUV40FB22AS0008-20030730).
14. V4.0F, V4.0G: 8 LUNs/Symmetrix Fibre director port (LUNs 000-007 valid).
15. Tru64 V4.0G latest qualified Patch Kit 4 (T64V40GB22AS0004-20030731).
16. Firmware Version 1.00X6.

1. Fibre Channel device driver distributed and supported by Bull.
2. AIX 5.1 32/64-bit kernel support.
3. AIX 5.1 supported only with 32-bit kernel.

- Requires minimum AIX APAR IY05369. Requires minimum EMC ODM fileset support (4.3.3.0 IBM Fibre Channel interface support for Symmetrix). Supported adapter firmware, 3.22A1.
- Requires minimum AIX APAR IY08960, IY03872. Requires minimum EMC ODM fileset support (4.3.3.1 IBM Fibre Channel interface support for Symmetrix). Supported adapter firmware, 3.22A1.
- Minimum microcode levels RH0 20413 dated 05/22/2002 or later.
- Obtain the EMC Symmetrix and AIX Fibre boot document from avtar.eng.emc.com for installation and configuration instructions.
- Minimum Powerpath version 3.0.3 is supported.
- Fibre boot when used under AIX 5.2 requires APAR IY41028 which can be obtained from IBM at <https://techsupport.services.ibm.com/server/fixes?view=pSeries>.
- AIX 5.2 32/64 bit kernel supported. Requires Minimum EMC ODM fileset support 5.0.0.0.
- Firmware Version 3.82A1. Minimum supported level.
- For all PCI-based hosts only: see HBA placement guidelines in the IBM document PCI Adapter Placement Reference SA38-0538-6, available at http://www-1.ibm.com/servers/eserver/pseries/library/hardware_docs/sa38/380538.pdf
- System/Service processor combined microcode Version RH020413 dated 05/22/2002 or later.
- Requires minimum ODM fileset support (5.0.0.0 EMC Symmetrix Fibre Channel support software).
- IBM Native Fibre Channel drivers with feature code 6227 and with feature code 6228 are supported on the same server. Feature 6228 and 6239 are supported on the same server. Mixed FC-AL and FC-SW are supported on the same server. 6227 filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1000f7.te; 6228 filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1000f9.diag, devices.pci.df1000f9.te; 6239 filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1080f9.diag, devices.pci.df1080f9.rte
Firmware Version 3.22A1. Minimum supported level.
- For minimum Symmetrix microcode for booting over Fibre Channel, Minimum microcode levels for booting over Fibre Channel: 5266.34, 5566.36, 5267.16, 5567.23, 5268.11, 5568.36. For minimum Symmetrix microcode for PowerPath support, Minimum microcode levels for PowerPath boot support: 5266.43, 5566.45, 5267.35, 5567.42, 5268.11, 5568.36.
- System microcode CL020407 or later.
- System/Service processor combined microcode Version 20020920 dated 11/19/2002 or later.
- System/Service processor combined microcode Version NAN02066/SC020308 dated 03/29/2002 or later.
- FC-SW and FC-AL are supported on the same server.
- System microcode CM020407 or later.

20. System microcode MM020407 or later.
21. System/Service processor combined microcode Version SPH02254/sh020307 dated 11/20/2002 or later.
22. AIX 4.3.3 ML9, APAR IY22024
23. Minimum PowerPath version 3.0.0. For PowerPath patches 3.0.x, the bootfix.sh script is required for boot support. See the EMC Primus case ID emc58038 for more details and the PowerPath Release Notes for installation.
24. Booting from a PowerPath device is supported with FC-SW topology only.
25. Fibre boot when used under AIX 4.3 requires APAR IY42989 which can be obtained from IBM at <https://techsupport.services.ibm.com/server/fixes?view=pSeries>.
26. Requires minimum EMC ODM fileset support (4.3.3.1 IBM Fibre Channel interface support for Symmetrix).
27. For all PCI-based hosts only: See http://www-1.ibm.com/servers/eserver/pseries/library/hardware_docs/sa38/380538.pdf for appropriate HBA placement guidelines.
28. System/Service processor combined microcode Version SST01256/SS010614 dated 10/23/2001 or later.
29. System/Service processor combined microcode Version L02113/ag010611 or later.
30. Requires minimum AIX 4.3.3 with maintenance level 08.
31. Requires minimum EMC ODM fileset support (4.3.3.1 IBM Fibre Channel interface support for Symmetrix). Device driver df1000f9 is distributed by IBM.
32. Mixed FC-AL and FC-SW are supported on the same server.
33. The Following feature codes are supported: 2054: Power 3 High Node 2055: SP expansion I/O 2056: 375 MHz Power 3 thin node 2058: 375 MHz Power 3 high node.
34. The following link provides detailed data for all 9076-SP2 models and feature codes: http://www1.ibm.com/cgi-bin/master?request=salesmanual&parms=SMS&h=NTZH*daEMSRi4n1USenGnN9332&xhi=usa.main%7Csalesmanual%5E&type=D&search=9076&title=T&product
35. AIX 5.1 ML1, APAR IY21957
36. Fibre boot when used under AIX 5.1 requires APAR IY40885 which can be obtained from IBM at <https://techsupport.services.ibm.com/server/fixes?view=pSeries>.
37. AIX 5.1 only supported with 32-bit kernel. Requires minimum EMC ODM fileset support 5.0.0.0.
38. AIX 5.1 32/64 bit Kernel supported. Requires minimum EMC ODM fileset support 5.0.0.0.
39. See http://www.rs6000.ibm.com/resource/hardware_docs/sa38-0538/380538.pdf for appropriate HBA placement guidelines
40. AIX 5.1 supported with 32/64-bit kernel. Requires minimum EMC ODM fileset support 5.0.0.0.
41. System/Service processor combined microcode Version CLT02066/ct020307 dated 04/04/2002 or later.
42. Minimum Powerpath version 3.0.2. For Powerpath patches 3.0.x, the bootfix.sh script is required for boot support. See the EMC Primus case ID emc58038 for more details and the PowerPath Release Notes for installation
43. AIX 5.1 ML1, APAR IY21957 or higher.
44. System/Service processor combined microcode Version RR020822 dated 09/19/2002 or later.
45. Requires minimum AIX5.1 with maintenance level 03 APAR IY32749.
46. System/Service processor combined microcode Version RK021120 dated 12/11/2002 or later.
47. System/Service processor combined microcode Version RK030206 dated 03/31/2003 or later.
48. Requires AIX 5.1 with minimum maintenance level 04 APAR IY44478.
49. Firmware Version 1.00X5. Minimum supported level.
50. Requires AIX 5.2 with minimum maintenance level 01 APAR IY44479.
51. **Requires CLArrayS3.5.2.0.7**
52. **AIX 5.2 requires Operating System APAR# IY36782, IY37744 and IY37746 for support with HACMP and HACMP/ES version 4.5 and PSSP 3.5.**
53. **Requires AIX APAR IY48995**
54. **IBM 6227 and 6228 adapters are supported on the same server. Mixed FC-AL and FC-SW are supported on the same server.**

IBM MVS/ESA

IBM

IBM – IBM MVS/ESA							
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot	Comments
1	ES/9000: 9020, 9121, 9221	Mainframe Bus	IBM MVS/ESA 5.1	IBM ESCON	ESCON	N	See ¹
2	S/390 parallel Enterprise Servers (G5 series) 9672-Rxx	Mainframe Bus	IBM MVS/ESA 5.1	IBM ESCON	ESCON	N	

1. SuSE Linux AG kernel 2.2 / 2.4, TurboLinux kernel 2.2 / 2.4, and Red Hat kernel 2.2 / 2.4: support for Linux on Symmetrix is limited to basic I/O operations only. Control of Symmetrix features (i.e., SRDF, TF, Config Mgr) is not supported at this time. Linux is supported both in an LPAR and as a guest under VM/ESA.

IBM OS/390

- SuSE Linux AG kernel 2.2 / 2.4, TurboLinux kernel 2.2 / 2.4, and Red Hat kernel 2.2 / 2.4: support for Linux on Symmetrix is limited to basic I/O operations only. Control of Symmetrix features (i.e., SRDF, TF, Config Mgr) is not supported at this time. Linux is supported both in an LPAR and as a guest under VM/ESA.

Microsoft Windows 2000

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non-disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

1. EMC recommends that HBAs of different vendors not be used in the same host server.
2. Qlogic SANSurfer/SANBlade Manager is not supported.
3. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
4. Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.
By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.
The workaround is to perform "symcfg discover" after rebooting.

5. Driver Version 8.2.3.21.
6. Firmware Version 3.90a7.
7. Driver Version 2.21a7.
8. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
9. QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
10. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
11. Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

- NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.
12. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
 13. Firmware Version 1.01a2.
 14. The LP9002-E now ships with the LP9002L-E low profile adapter.
 15. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
 16. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 17. Firmware Version 1.80a3.
 18. **Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- If using Dell PERC Controller, requires PERC 3 with OpenManager 3.0 and Array Manager 3.1. The afamgt.sys must be version 2.6.0.3486 (or above)..
- Driver Version 2.21a7.
- Firmware Version 1.01a2.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Firmware Version 3.90a7.
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

- NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 - Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
 - Driver Version 8.2.3.21.
 - The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
 - Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
 - Driver Version 8.1.5.20.
 - Not supported with the HP NetServer LC-2000.
 - (HHBA-5101BK-01)
 - Driver Version 8.2.1.20.
 - SNIA API Supported.
 - Driver/Firmware available at <http://www.emulex.com>
 - Driver Version 2.13a4.
 - Firmware Version 3.30a7.
 - Firmware Version 1.80a3.
 - Not supported with Emulex LP8000-EMC HBA.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

1. The LP9002-E now ships with the LP9002L-E low profile adapter.
2. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
3. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
4. QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
5. EMC recommends that HBAs of different vendors not be used in the same host server.
6. Driver Version 2.21a7.
7. Firmware Version 3.90a7.
8. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
9. Firmware Version 1.01a2.
10. Must use standard PCI 32bit/33MHz slot for SCSI
11. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
12. Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

13. Driver Version 8.1.5.20.
14. Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
15. Driver Version 8.2.3.21.
16. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
17. Driver Version 8.2.1.20.
18. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Driver Version 2.21a7.
- Firmware Version 3.90a7.
- Driver Version 8.1.5.20.
- Firmware Version 1.01a2.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- HPQ Proliant ML350 (1GHz) : D04,F04 (11/13/2000) , HPQ Proliant ML350(600.733,800,866,933 MHz) : D02, F04 (11/13/2000).
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.3.21.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- When used with the HP NetServer LC2000: 32 device maximum.
- Not supported with the HP NetServer LC-2000.
- Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_r_notes/bsdmatrix/matrix213991.html
- Requires manual intervention on bootup to clear "new hardware found" message box at boot time.
- The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
- Does not support Connectrix DS-16M, DS-32M, or McData ED-5000
- (HHBA-5101BK-01)
- Includes both Pentium PRO and XEON models
- Supported by direct attach only**
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Supports BIOS 1.34. Supports SNIA HBA API. Driver and BIOS available at <http://www.qlogic.com>.
- Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
- Driver Version 8.2.1.20.
- Firmware Version 1.80a3.
- Requires minimum BIOS v4.01 rev A (5/17/2002) for use with Emulex HBAs.**
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. Supports SNIA HBA API.**
- EMC does not support the Emulex equivalent of the FCA2101 (LP952.) Use EMC supported driver for LP9002 from <http://www.emulex.com>.**
- Firmware Version 3.90a7. Contact HPQ for supported firmware versions for this HBA.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- This HBA is equivalent to the qLogic QLA2310.
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- For IBM xSeries Servers running Windows NT and Windows 2000 with IBM ServerRaid controller 4M, the ServerRaid Driver must be 6.00 or above for use with EMC PowerPath 3.0 and above. IBM driver can be downloaded at: <http://www-3.ibm.com/pc/support/site.wss/document.do?lnocid=MIGR-39723>
- Driver Version 8.2.3.21.
- This HBA is equivalent to the qLogic QLA2340.
- Driver Version 8.1.5.20.
- For IBM Netfinity and xSeries Intel servers only.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Driver Version 2.21a7.
- Firmware Version 1.01a2.
- QLLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.

21. Firmware Version 3.90a7.
 22. Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

- NOTE: LP8000/850 HBAs without –EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.
 Not supported with the HP NetServer LC–2000.
 24. The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
 25. QLogic SANSurfer/SANBlade Manager is not supported.
 26. Supported by direct attach only
 27. Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_rnotes/bsdmatrix/matrix213991.html
 28. Requires manual intervention on bootup to clear "new hardware found" message box at boot time.
 29. Does not support Connectrix DS–16M, DS–32M, or McData ED–5000
 30. The HP D8602B Tachlre Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
 31. (HHBA–5101BK–01)
 32. EMC VolumeLogix Software required for multiple BladeServers when direct–attached to EMC Symmetrix storage.
 33. Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.
 34. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
 35. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
 36. Due to the HS20's embedded FC–SW design, EMC Volume Logix is required to assign LUNS to each individual blade server.
 37. Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.
 38. Driver Version 2.13a4.
 39. Firmware Version 3.30a7.
 40. Driver Version 8.2.1.20.
 41. Firmware Version 1.80a3.
 42. **Dual–port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
 43. **Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**
 44. **Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

1. QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
 2. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
 3. EMC recommends that HBAs of different vendors not be used in the same host server.
 4. Driver Version 8.2.3.21.
 5. Supported by direct attach only
 6. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
 7. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
 8. Driver Version 2.21a7.
 9. Firmware Version 3.90a7.
 10. Driver Version 8.1.5.20.
 11. Firmware Version 1.01a2.
 12. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
 13. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
 14. The LP9002-E now ships with the LP9002L-E low profile adapter.
 15. Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.
- NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.
16. Requires package PSCSI302 Ver.02.10.10.09 or higher available from NCR.
 17. Driver Version 1.8.30.
 18. Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
 19. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 20. Firmware Version 1.80a3.
 21. Driver version 1.8.30
 22. **Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

- EMC recommends that HBAs of different vendors not be used in the same host server.
- Qlogic SANSurfer/SANBlade Manager is not supported.
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.3.21.
- Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.

By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.

The workaround is to perform "symcfg discover" after rebooting.

- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

- Driver Version 2.21a7.
- Firmware Version 3.90a7.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 8.1.5.20.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- QLogic SanBlade Manager is not supported.
- Firmware Version 1.80a3.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**
- Refer to the Stratus, Bull or NEC documentation for hardware, software and non-storage related setup and configuration.
- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Hardware and adapters similar to Unisys ES7000-100, ES7000-200.
- Driver Version 2.21a7.
- Firmware Version 3.90a7.
- The Libra 18x includes native MCP, and Virtual Machine for MCP (Windows MCPvm) partitions

10. Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without –EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

11. The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
12. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
13. Supported by direct attach only
14. Firmware Version 1.01a2.
15. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
16. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
17. Driver Version 8.2.3.21.
18. (HHBA–5101BK–01)
19. Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
20. Firmware Version 1.80a3.
21. **Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

Microsoft Windows 2003

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiON non–disruptive upgrades for Windows systems booting from CLARiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

Bull

Bull – Microsoft Windows 2003						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
1	Express 5800: 320Lb, 320Lb–R, 330Mb–R ^{6, 7} , 340Ha–R	PCI	Microsoft Windows 2003: Enterprise Edition (Advanced Server) ¹ , Standard Edition (Server) ¹	QLogic QLA2310F–E–SP ^{2, 3, 4, 5}	FC–AL, FC–SW	N
2	NovaScale: 4020 (Itanium2), 4040 (Itanium2), 5080 (Itanium2), 5160 (Itanium2)	PCI–X	Microsoft Windows 2003 64–Bit: Enterprise Edition (Advanced Server), Standard Edition (Server)	Emulex LP9802–E ^{8, 9, 10, 11, 12, 13}	FC–AL, FC–SW	N

1. EMC recommends that HBAs of different vendors not be used in the same host server.
2. Qlogic SANSurfer/SANblade Manager is not supported.
3. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
4. Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
5. Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
6. Supports Stratus OS 1.3.X through 2.1.X.
7. Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
8. **QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
9. **FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.**
10. Emulex driver and BIOS available from <http://www.emulex.com>.
11. **PowerPath requires driver 1.01x1 with Firmware 1.01A2 and StorPORT fix Q823728**
12. Driver Version Emulex SCSI port driver v2.21a7.
13. Driver Version Emulex StorPORT driver v1.01x1.

1. EMC recommends that HBAs of different vendors not be used in the same host server.
2. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
3. Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
4. Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
5. Firmware Version 3.90a7.
6. Firmware Version 1.01a2.
7. Must use standard PCI 32bit/33MHz slot for SCSI

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb:\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb:[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Firmware Version 3.90a7.
- Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Firmware Version 1.01a2.
- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb:\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb:[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
- Firmware Version 1.80a3.
- Includes both Pentium PRO and XEON models
- Firmware Version 3.90a7. Contact HPQ for supported firmware versions for this HBA.
- Driver Version 2.21a7. EMC does not support the Emulex equivalent of the FCA2101 (LP952.) Use EMC supported driver for LP9002 from <http://www.emulex.com>.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.**
- No EMC Layered Applications supported on IA64 server platforms**
- Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb:\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb:[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb:\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb:[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Firmware Version 3.90a7.
- Firmware Version 1.01a2.
- Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb:\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb:[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- This HBA is equivalent to the qLogic QLA2340.
- This HBA is equivalent to the qLogic QLA2310.
- EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
- Driver Version 8.2.3.21.
- Driver Version 8.2.3.27. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb:\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb:[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.**
- When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
- Due to the HS20's embedded FC-SW design, EMC Volume Logix is required to assign LUNS to each individual blade server.
- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
- Firmware Version 1.80a3.
- Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
- Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**
- No EMC Layered Applications supported on IA64 server platforms**

22. Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Firmware Version 3.90a7.
- Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Firmware Version 1.01a2.
- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.

By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases. The workaround is to perform "symcfg discover" after rebooting.

- QLogic SanBlade Manager is not supported.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- QLogic SANSurfer/SANBlade Manager is not supported.
- Firmware Version 1.80a3.
- No EMC Layered Applications supported on IA64 server platforms**
- This HBA is equivalent to the qLogic QLA2340.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- This HBA is equivalent to the Emulex LP982.
- Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Supports Stratus OS 1.3.X through 2.1.X.
- Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
- EMC does not support the Emulex equivalent of N8190-105. Check with NEC on where to download the latest supported firmware and boot BIOS for this adapter.**

Microsoft Windows NT

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non-disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.

4) External storage power failure.

5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.

6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN. NOTE: Windows NT installation will fail immediately after installing Network Services for hosts that use an Intel Network Interface Card (NIC).

Bull

Bull – Microsoft Windows NT						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
1	Express 5800: 140Hb, 140Ra4, HV8600, HX4600, MH4500	PCI	Microsoft Windows NT 4.0 SP6A ¹	Emulex: LP8000-EMC ^{2, 3, 4} , LP850-EMC ^{2, 3} , LP9002-E (LP9002L-E) ^{2, 3, 7, 11, 12} , LP982-E ^{2, 9, 10} , QLogic QLA2340-E-SP ^{5, 6, 7, 8}	FC-AL, FC-SW	Y

- EMC recommends that HBAs of different vendors not be used in the same host server.
- Driver Version 2.20a12.
- Firmware Version 3.90a7.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Driver Version 8.1.5.21.
- HBA BIOS is 1.34.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Driver/BIOS are available at <http://www.qlogic.com>
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Driver Version 2.20a12.
- Firmware Version 3.90a7.
- If using Dell PERC Controller, requires PERC 3 with OpenManager 3.0 and Array Manager 3.1. The afamgt.sys must be version 2.6.0.3486 (or above)..

8. PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
9. Dell PowerEdge supports a maximum of 2 Emulex HBAs at one time and the total power cannot exceed 20 Watts.
10. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
11. Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
12. Driver Version 8.1.5.20.
13. Driver Version 8.1.5.21.
14. HBA BIOS is 1.34.
15. Driver/BIOS are available at <http://www.qlogic.com>
16. The LP9002-E now ships with the LP9002L-E low profile adapter.
17. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
18. Firmware Version 1.01a2.
19. Driver Version 2.09D.
20. (HHBA-5101BK-01)
21. Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_rnotes/bsdmatrix/matrix213991.html
22. Requires manual intervention on bootup to clear "new hardware found" message box at boot time.
23. The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Driver Version 2.20a12.
- Firmware Version 3.90a7.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Driver Version 8.1.5.20.
- For IBM Netfinity and xSeries Intel servers only.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- HBA BIOS is 1.34.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Driver/BIOS are available at <http://www.qlogic.com>
- Driver Version 8.1.5.21.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Driver Version 2.09D.
- Requires manual intervention on bootup to clear "new hardware found" message box at boot time.
- The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
- Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_notes/bsdmatrix/matrix213991.html
- (HHBA-5101BK-01)
- Driver Version 4.04.
- Includes both Pentium PRO and XEON models
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- Requires BIOS v4.01 rev A (5/17/2002) for use with Emulex HBAs.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 1.34.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- This HBA is equivalent to the qLogic QLA2310.
- Driver/BIOS are available at <http://www.qlogic.com>
- For IBM xSeries Servers running Windows NT and Windows 2000 with IBM ServerRaid controller 4M, the ServerRaid Driver must be 6.00 or above for use with EMC PowerPath 3.0 and above. IBM driver can be downloaded at: <http://www-3.ibm.com/pc/support/site.wss/document.do?Indocid=MIGR-39723>
- Driver Version 8.1.5.21.
- This HBA is equivalent to the qLogic QLA2340.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- Driver Version 8.1.5.20.
- For IBM Netfinity and xSeries Intel servers only.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Driver Version 2.20a12.
- Firmware Version 3.90a7.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- It is recommended that the QLogic QLA2340 is not installed in Slot 1.
- Qlogic SanBlade Manager is not supported.
- Qlogic SANSurfer/SANBlade Manager is not supported.
- Driver Version 2.09D.
- Requires manual intervention on bootup to clear "new hardware found" message box at boot time.
- The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
- Driver Version 2.0.25.44. Driver available at http://h20004.www2.hp.com/keeper_nnotes/bsdmatrix/matrix213991.html
- (HHBA-5101BK-01)

- EMC recommends that HBAs of different vendors not be used in the same host server.
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without –EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

- Firmware Version 3.90a7.
- Driver Version 2.20a12.
- HBA BIOS is 1.37.
- Driver Version 6.16.
- The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
- HBA BIOS is 1.34.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Driver/BIOS are available at <http://www.qlogic.com>
- Driver Version 8.1.5.21.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- The LP9002–E now ships with the LP9002L–E low profile adapter.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.

- Edit config.sys with the following: Files=100 Buffers=99
- When installing NetWare for fabric boot (when operating system is not installed in the local host) on the Symmetrix, create only one LUN and then perform the install. To install a second server that will be fabric boot, repeat the process by creating one additional LUN and then loading the operating system to it. Continue this process until the desired number of fabric boot servers have been reached. Conditions exist where several LUNs are initially created and you perform your first install, NetWare will sometimes acquire and stripe the operating system across several of the newly created LUNs.
- To enable failover with fabric boot DOSFAT.NSS must be loaded from the autoexec.ncf. In a failed condition the c:\ partition will not failover correctly but the DOSFAT_C: partition will.
- NetWare boot support is contingent on migration of the DOS boot partition to an NSS partition. NetWare will warn you of the possibility of data corruption if you convert the DOS boot partition to an NSS partition. The risk of data corruption is during I/O to the C: drive while in the NetWare debugger, or while writing reboot log files during an "Auto Restart After Abend". When you load DOSFAT, please set "Auto Restart After Abend" to 0 to avoid the possibility of data corruption.
- Maximum number of NWFS volumes that can be mounted is 64.
- Driver installation with NetWare 5.0 SP6A: Do not load cpmpmk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
- Driver Version 6.51a.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
- Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- Driver Version v6.51a.
- HPQ Proliant servers with ATF and Powerpath requires use of SCSIHD in place of CPQSHD.
- Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.**
- For ATF on Pre CX series, Multipath support or connections to the secondary port are not supported at this time. One path per SP, 2 HBAs per host.
- PowerPath and ATF supported.
- Novell Storage Services supported.
- DOS boot device maximum accessible capacity is 2GB. Netware SYS volume must be in LUN 0.
- Supports FC-AL point-to-point and Fabric switch configurations.
- Driver Version 3.90a7.
- PowerPath not currently supported.
- Requires BIOS version 2.02e.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- Requires HBA bios 1.83.**
- Requires NetWare patches: NWPAPT2A and NSS5J.
- Requires NWPA.NLM V.3.07A update from Novell website.
- Driver installation with NetWare 5.0 SP6A: Do not load cpmpmk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Requires HBA firmware revision 1.83, available at <http://www.qlogic.com>**
- Requires SP4 or higher for NetWare 5.00.**
- Qlogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
- Firmware Version 1.34.

- Maximum number of NWFS volumes that can be mounted is 64.
- Driver installation with NetWare 5.0 SP6A: Do not load cpmpmk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
- Driver Version 6.51a.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
- Edit config.sys with the following: Files=100 Buffers=99
- When installing NetWare for fabric boot (when operating system is not installed in the local host) on the Symmetrix, create only one LUN and then perform the install. To install a second server that will be fabric boot, repeat the process by creating one additional LUN and then loading the operating system to it. Continue this process until the desired number of fabric boot servers have been reached. Conditions exist where several LUNs are initially created and you perform your first install, NetWare will sometimes acquire and stripe the operating system across several of the newly created LUNs.
- To enable failover with fabric boot DOSFAT.NSS must be loaded from the autoexec.ncf. In a failed condition the c:\ partition will not failover correctly but the DOSFAT_C: partition will.
- NetWare boot support is contingent on migration of the DOS boot partition to an NSS partition. NetWare will warn you of the possibility of data corruption if you convert the DOS boot partition to an NSS partition. The risk of data corruption is during I/O to the C: drive while in the NetWare debugger, or while writing reboot log files during an "Auto Restart After Abend". When you load DOSFAT, please set "Auto Restart After Abend" to 0 to avoid the possibility of data corruption.
- Must use standard PCI 32bit/33MHz slot for SCSI
- Driver Version v6.51a.
- Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- PowerPath not currently supported.
- Requires BIOS version 2.02e.
- Driver Version 3.90a7.
- Requires NWPA.NLM V.3.07A update from Novell website.
- Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.**
- QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
- Firmware Version 1.34.

- Maximum number of NWFS volumes that can be mounted is 64.
- Driver installation with NetWare 5.0 SP6A: Do not load cpmpmk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
- Includes both Pentium PRO and XEON models
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Driver Version 6.51a.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
- Edit config.sys with the following: Files=100 Buffers=99
- When installing NetWare for fabric boot (when operating system is not installed in the local host) on the Symmetrix, create only one LUN and then perform the install. To install a second server that will be fabric boot, repeat the process by creating one additional LUN and then loading the operating system to it. Continue this process until the desired number of fabric boot servers have been reached. Conditions exist where several LUNs are initially created and you perform your first install, NetWare will sometimes acquire and stripe the operating system across several of the newly created LUNs.
- To enable failover with fabric boot DOSFAT.NSS must be loaded from the autoexec.ncf. In a failed condition the c:\ partition will not failover correctly but the DOSFAT_C: partition will.
- NetWare boot support is contingent on migration of the DOS boot partition to an NSS partition. NetWare will warn you of the possibility of data corruption if you convert the DOS boot partition to an NSS partition. The risk of data corruption is during I/O to the C: drive while in the NetWare debugger, or while writing reboot log files during an "Auto Restart After Abend". When you load DOSFAT, please set "Auto Restart After Abend" to 0 to avoid the possibility of data corruption.
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- HPQ Proliant servers with ATF and Powerpath requires use of SCSIHD in place of CPQSHD.
- Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- Driver Version v6.51a.
- Requires HBA bios 1.83.**
- Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.**
- (HHBA-5101BK-01)
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Driver Version 2.00E or higher. Requires NetWare 5.1 support pack 3 or higher.
- PowerPath not currently supported.
- Requires BIOS version 2.02e.
- Driver Version 3.90a7.
- Requires NetWare patches: NWPAPT2A and NSS5J.
- Requires NWPA.NLM V.3.07A update from Novell website.
- Qlogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
- Firmware Version 1.34.

1. NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.

2. PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.

3. Maximum number of NWFS volumes that can be mounted is 64.

4. Driver installation with NetWare 5.0 SP6A: Do not load cpqmpk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with

- the install. When install is complete, down the server and copy nwnpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
5. Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
 6. Driver Version 6.51a.
 7. This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
 8. **Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
 9. Driver Version v6.51a.
 10. **Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.**
 11. PowerPath not currently supported.
 12. Requires BIOS version 2.02e.
 13. Driver Version 3.90a7.
 14. HPQ Proliant servers with ATF and Powerpath requires use of SCSiHD in place of CPQSHD.
 15. Host must be offline for interfamily Symmetrix microcode upgrade.
 16. This HBA is equivalent to the qLogic QLA2310.
 17. **Requires BIOS 1.34 available from QLogic at <http://www.qlogic.com>.**
 18. **BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
 19. Driver Version 6.50v.
 20. Driver Version 6.v. Supports persistent binding and only supports Class 3.
 21. This HBA is equivalent to the qLogic QLA2340.
 22. (QLA2200) For IBM xSeries and Netfinity servers only.
 23. Requires NetWare patches: NWPAPT2A and NSS5J.
 24. This server only supports 5 Volt HBAs: qLogic 22XX family, qLogic 23XX family, Emulex LP8000, and Emulex LP850
 25. Requires NWPA.NLM V.3.07A update from Novell website.
 26. **QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
 27. Firmware Version 1.34.

- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- Driver Version v6.x series. Supports persistent binding and only supports Class 3.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- The kernel version listed is included in the corresponding standard distributed release.
- Supported with QLogic driver v6.05.00.
- Driver Version v6.05.00.
- An RPM from Dell may be used to install the QLogic v6.05.00 driver and may be obtained from the QLogic website at http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- Driver Version v6.04.01.
- Single HBA zoning is required regardless of the switch being utilized.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- Requires QLogic driver 4.47.18 driver disk, dd.img-i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Only one HBA is qualified for use in the Linux host when booting from the CLARiON via fabric.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Driver Version 1.23a.
- FCode value 1.63a2.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
- Firmware Version 3.90a7.
- FCode value 1.63a.
- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
- Firmware Version 1.80a2.
- Driver Version v1.22e.
- Firmware Version v3.90a7.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- Firmware Version 1.02a0.
- Firmware Version 1.80a3.
- Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.**

- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- Driver Version v6.x series. Supports persistent binding and only supports Class 3.
- The kernel version listed is included in the corresponding standard distributed release.
- Supported with QLogic driver v6.05.00.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- Driver Version v6.05.00.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Includes both Pentium PRO and XEON models
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Single HBA zoning is required regardless of the switch being utilized.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- This HBA is equivalent to the qLogic QLA2310.
- Driver Version v6.04.02.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
- This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
- Requires QLogic driver 4.47.18 driver disk, dd.img-i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Only one HBA is qualified for use in the Linux host when booting from the CLARiiON via fabric.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- Driver Version v6.04.01.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- Emulex driver and BIOS available from <http://www.emulex.com>.
- Driver Version 1.23a.
- FCode value 1.63a2.

38. FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
39. The LP9002-E now ships with the LP9002L-E low profile adapter.
40. FCode value 1.63a.
41. Firmware Version 3.90a7.
42. Linux v2.4.x Kernels support a maximum of 128 devices per system.
43. Firmware Version 1.80a2.
44. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
45. Firmware Version 1.01a2.
46. Firmware Version 1.02a0.
47. Firmware Version v3.90a7.
48. Driver Version v1.22e.
49. **Requires BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
50. **QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
51. Firmware Version 1.80a3.
52. **Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.**

1. The kernel version listed is included in the corresponding standard distributed release.
 2. Supported with QLogic driver v6.05.00.
 3. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
 4. Host must be offline for interfamily Symmetrix microcode upgrade.
 5. (QLA2200) For IBM xSeries and Netfinity servers only.
 6. **BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
 7. Driver Version v6.04.02.
 8. Driver Version v6.05.00.
 9. Driver Version v6.x series. Supports persistent binding and only supports Class 3.
 10. This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
 11. This HBA is equivalent to the qLogic QLA2310.
 12. This HBA is equivalent to the qLogic QLA2340.
 13. PowerPath v3.02 not supported on this system.
 14. This system is supported with Red Hat 2.1 Advanced Server v2.4.9-E.3 and updated with v2.4.9-E.9, E.10, and E.12 RPMs.
 15. PowerPath v3.0.2 b069 is not supported on this system.
 16. This kernel is limited to 110 devices, not 128.
 17. This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
 18. Requires v6.05 or higher Navisphere host agent/CLI.
 19. Driver Version v6.04.01.
 20. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
 21. **QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
 22. Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
 23. Requires QLogic driver 4.47.18 driver disk, dd.img-i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
 24. Only one HBA is qualified for use in the Linux host when booting from the CLARiON via fabric.
 25. Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
 26. Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
 27. No MirrorView or SnapView used on boot LUNs.
 28. EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
 29. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
 30. Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
 31. For any CLARiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
 32. This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
 33. Single HBA zoning is required regardless of the switch being utilized.
 34. This server only supports 5 Volt HBAs: qLogic 22XX family, qLogic 23XX family, Emulex LP8000, and Emulex LP850
 35. Driver Version 1.23a.
 36. FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
 37. FCode value 1.63a2.
 38. The LP9002-E now ships with the LP9002L-E low profile adapter.
 39. **QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
 40. Emulex driver and BIOS available from <http://www.emulex.com>.
 41. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
 42. Firmware Version 3.90a7.
 43. FCode value 1.63a.
 44. Linux v2.4.x Kernels support a maximum of 128 devices per system.
 45. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
 46. Firmware Version 1.80a2.
 47. Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.
 48. **Due to the HS20's embedded FC-SW design, EMC Access Logix is required to assign LUNS to each individual blade server.**
 49. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"
- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
50. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
 51. Driver Version 6.04.01.
 52. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
 53. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
 54. Driver Version v1.22e.
 55. Firmware Version v3.90a7.
 56. **Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
 57. **Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**
 58. **QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
 59. Firmware Version 1.02a0.
 60. Firmware Version 1.80a3.
 61. **Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.**

- Requires QLogic driver 4.47.18 driver disk, dd.img-i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Only one HBA is qualified for use in the Linux host when booting from the CLARiiON via fabric.
- Optical cables apply to CX600, CX400, CX200, FC4500, FC4500, FC5300 with MIA.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPK.
- This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Driver Version v6.04.01.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.

16. **QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
17. Single HBA zoning is required regardless of the switch being utilized.
18. Driver Version v6.05.00.
19. FCode value 1.63a2.
20. Driver Version 1.23a.
21. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
22. Emulex driver and BIOS available from <http://www.emulex.com>.
23. **QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
24. FC–AL and FC–SW can run concurrently on separate HBAs on the same Host.
25. The LP9002–E now ships with the LP9002L–E low profile adapter.
26. FCode value 1.63a.
27. Firmware Version 3.90a7.
28. Linux v2.4.x Kernels support a maximum of 128 devices per system.
29. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
30. Firmware Version 1.80a2.
31. Firmware Version v3.90a7.
32. Driver Version v1.22e.
33. Firmware Version 1.02a0.
34. **QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
35. Firmware Version 1.80a3.
36. **Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.**
37. **Supports Stratus OS 2.0.X through 2.1.X.**
38. **Supports Stratus OS 1.3.X through 2.1.X.**
39. **Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.**

- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiiON–attached hosts available from <ftp://ftp.emc.com/pub/elab/linux>.
- Driver Version 6.05.00.
- Single HBA zoning is required regardless of the switch being utilized.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
- Requires BIOS 1.34 available from <http://www.qlogic.com>.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- Requires BIOS 1.34 available from QLogic at <http://www.qlogic.com>.
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.
- FCode value 1.63a2.
- Firmware Version 1.01a2.
- Driver Version 1.23a.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
- Firmware Version 1.80a3.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Access Logic required, direct connect or fabric, (no booting through switch inter–switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- An RPM from Dell may be used to install the QLogic v6.05.00 driver and may be obtained from the QLogic website at http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Firmware Version 3.90a7.

- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPK.
- Requires rev1_sles8sp2a.patch for CLARiiON–attached hosts available from <ftp://ftp.emc.com/pub/elab/linux>.
- Single HBA zoning is required regardless of the switch being utilized.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
- Requires BIOS 1.34 available from <http://www.qlogic.com>.
- Compaq servers that are rack–mountable (designated by Compaq with an "R") are supported.
- Driver Version 6.05.00.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Includes both Pentium PRO and XEON models
- HPQ Proliant servers that are rack–mountable (designated with an "R") are supported.

13. This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
14. Requires BIOS 1.34 available from QLogic at <http://www.qlogic.com>.
15. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RFP.
16. Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
17. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
18. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
19. Emulex driver and BIOS available from <http://www.emulex.com>.
20. QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.
21. Driver Version 1.23a.
22. Firmware Version 1.01a2.
23. FCode value 1.63a2.
24. Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
25. Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
26. No MirrorView or SnapView used on boot LUNs.
27. EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
28. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
29. Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
30. For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
31. Firmware Version 1.80a3.
32. QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
33. Firmware Version 3.90a7.

- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiiON–attached hosts available from ftp://ftp.emc.com/pub/elab/linux.
- Single HBA zoning is required regardless of the switch being utilized.
- Host must be offline for interfamily Symmetrix microcode upgrade.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
- Requires BIOS 1.34 available from http://www.qlogic.com.
- Driver Version 6.05.00.
- Supports BIOS 1.83. Available at http://www.qlogic.com. Supports SNIA HBA API.
- This server only supports 5 Volt HBAs: QLogic 22XX family (if applicable), QLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- Requires BIOS 1.34 available from QLogic at http://www.qlogic.com.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Supports IBM BIOS 1.35. Available at http://www.qlogic.com.
- Due to the HS20's embedded FC–SW design, EMC Access Logic is required to assign LUNS to each individual blade server.
- When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.
 - EMC VolumeLogix Software required for multiple BladeServers when direct–attached to EMC Symmetrix storage.
 - Dual–port FC switch module. Can be used in place of Optical PassThru Module (OPM.)
 - Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.
 - FCCode value 1.63a2.
 - Firmware Version 1.01a2.
 - Driver Version 1.23a.
 - FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
 - The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
 - Emulex driver and BIOS available from http://www.emulex.com.
 - QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.
 - Firmware Version 1.80a3.
 - QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
 - Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
 - Access Logic required, direct connect or fabric, (no booting through switch inter–switch links)
 - No MirrorView or SnapView used on boot LUNs.
 - EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
 - Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
 - Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
 - For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
 - This system is supported with Red Hat 2.1 Advanced Server v2.4.9–E.3 and updated with v2.4.9–E.9, E.10, and E.12 RPMs.
 - PowerPath v3.0.2 b069 is not supported on this system.
 - PowerPath v3.02 not supported on this system.
 - Firmware Version 3.90a7.
