Egnera BladeFrame Egnera

Egnera – Egnera BladeFrame							
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot	Comments
1	BladeFrame cBlade-EP ⁴	PCI-X	Egnera BladeFrame 3.0 ^{1, 2}	QLogic QLA2342-E-SP ^{3, 5, 6, 7}	FC-AL, FC-SW	Y	

- Maximum of 423 LUNs are supported per BladeFrame.
- pBlades are qualified with RedHat 2.1 Advanced Server v2.4.9-e.12, v2.4.9-e.16 and v2.4.9-e.25.
- Supported with v4.47.18e QLogic driver included cBlade OS, BladeFrame 3.0, and BIOS v1.34.
- PowerPath is not supported on Egnera. Egnera multi-pathing is supported on both Symmetrix and CLARiiON storage arrays.
- Driver Version 4.47.18e5.
- Firmware Version 3.01.13.
- FCCode value 1.34.

1. See Technical Bulletin T010820 for supported patch levels.
 2. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
 3. With HP-UX 11.0, a failed-over LUN is not automatically restored to its parent SP following LCC removal and replacement on an FC4702 array. After the LCC has powered back up, the LUN can be restored by deactivating and activating the associated volume group using the command 'vgchange -a'. During other types of failover (disabling/reenabling SP ports on switch,

- etc.), the LUN "is" automatically restored.
4. HP A5158A FC-SW software requirement: FC-AL and FC-SW requires the HP A5158A Tachlite PCI Fibre Channel Adapter. The A5158A FC-SW software fabric driver version "AP0301", for HP-UX 11i is now available for download from HP's software depot site, <http://www.software.hp.com> under "drivers". It is referred to as the "hp pci tachyon tl fibre channel adapter", and requires the installation of dependent patch PHKL_22874 prior to installing the fabric driver, patches may be superceded or have co-dependencies as defined by HP.
 5. FC-AL, FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
 6. HP-UX 11.00 minimum driver revision B.11.00.06.
HP-UX 11i minimum driver revision B.11.11.06.
HP-UX 10.20 minimum driver revision B.10.20.01.
 7. L-Class requires minimum PDC firmware 40.26 or higher.
 8. rp5405, rp5430, rp5470, rp7400: (PA-8700 processors): Initial support with HP-UX 11.0 Sept 2001, 11i Sept 2001.
 9. Driver Version 11.00.10.
 10. Switched fabric (FC-SW) first supported on FC4500, requires Core Software 6.32.05 or higher, Navisphere Agent 4.3 or higher, and Access Logix enabled (data access control enabled).
 11. QuickLoop only or direct attach only.
 12. Virtual Partitions (VPAR) is supported on the N-class/rp7400 server.
VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later. Powerpath support on Virtual Partitions has to be RPQed at this time.
Requires PDC firmware rp7400 (PA-8700) requires PDC firmware 41.36.
 13. Required dependent FCMS patches are required (patches may be superceded or have co-dependencies as defined by HP): HP-UX 11.0, PHKL_21834 HP-UX 11i: PHKL_23626. NOTE: These patches must be installed before installing the driver, available at <http://us-support2.external.hp.com>, HSC Tachlite driver available at <http://www.software.hp.com>, under "drivers" and locate Fibre Channel HSC Tachlite adapter (A6684A or A6685A). For HP-UX 11i, the driver is under "hp tachyon tl fibre channel adapter" which enables support for A6684A/A6685A/A5158A.
 15. Qualified with only CX600, CX400, FC4500 and FC4700 with the switches listed in connectivity section, fabric or QuickLoop.
 16. Dx90, Rx90 servers support a maximum of 2 A6684A HBAs. The first must be installed in the turbo slot 10/12 and the second in any HSC slot.
 17. Dx90, Rx90 require minimum PDC firmware 41.35 or higher.
 18. For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC Symmetrix devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: `lvchange -r N /dev/vg01/lvol1` or `lvcreate -r N /dev/vg01`. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set. No additional patches are required for this option in HP-UX 11.0, HP-UX 11.11 and forward, however in HP-UX 10.x the "N" flag option was introduced with the following patches are required to be installed or patches which supercede or replace these in order to configure the logical volumes residing on Symmetrix devices in this manner: For all HP/UX 10.xx versions install the following Bad Block Reallocation Patch Pair: 10.01: PHKL_11294, PHKL_11890, PHCO_11288 (patches may be superceded or have co-dependencies as defined by HP). 10.10: PHKL_11816, PHCO_11817 (patches may be superceded or have co-dependencies as defined by HP). 10.20: PHKL_11086, PHKL_11903, PHCO_10964 (patches may be superceded or have co-dependencies as defined by HP).
 19. Minimum driver version for SNIA HBA API support with HP-UX 11.0 is B.11.00.10. Minimum driver version for SNIA HBA API support with HP-UX 11.11 is B.11.11.09.
 20. For HP/UX 11.00 minimum driver revision B.11.00.06.
For HP/UX 11i minimum driver revision B.11.11.06.
 21. HP-UX 11.0 ACE required patch: PHKL_23939
HP-UX 11i required patch: PHKL_23626
NOTE: These patches must be installed before installing the driver.
 22. Supported with CX600, CX400, FC4700. FC4700-2 supports 1 and 2 Gb modes. Restrictions apply in boot environments.
 23. Supported with HP-UX 11i (64-bit only). FC4700-2 minimum code level 8.44.x1.
 24. QuickLoop support: HP A5223A/AZ, HP A5224A/AZ using parameters outlined in Table 112 on page 293.
The A6795A HBA is capable of supporting both 1 and 2 Gb speeds.
QuickLoop is not supported with Brocade 3200/3800/12000, DS-16B2 or ED-12000B.
Auto-sensing capability on the HBA is permanently enabled. There is no option to disable auto-sensing on the HBA.
 25. FC-AL, FC-SW
 26. PDC 40.26 or later
 27. As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)
L2000 (product number A5191A)
N4000 Revision A (product number A3639A)
N4000 Revision B (product number A3639B)
 28. 1Gbit Quickloop supported beginning at firmware release v3.0.2h, all switch ports participating in the Quickloop must be set to 1 Gbit speed.
 29. Virtual Partitions (VPAR) is supported on the L-class/rp5470 server.
VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 41.02 or later.
 30. PA-8700 processors: Initial support with HP-UX 11.0 Sept 2001, HP-UX 11i Sept 2001.
 31. FC-AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
 32. Qualified with only CX600, CX400, FC4500 and FC4700 with the switches listed connectivity table, fabric or QuickLoop.
 33. Driver Version 11.11.09.
 34. HP-UX 11.0 minimum driver revision B.11.00.06. HP-UX 11i minimum driver revision B.11.11.06.
 35. Requires minimum PDC firmware 42.10.
 36. N-Class: Arbitrated loop boot with PDC rev 40.04 or higher. Fabric boot with PDC rev 40.25 or higher.
 37. See Technical Bulletin T010820 for LVM supported patch levels.
 38. The Brocade (Brocade, EMC, or HP models) switch port the HBA involved in a FC-SW topology boot process or FC-SW topology dump process is attached to, is required to be locked as G port when the boot or dump volume resides on the Symmetrix. This can be accomplished by executing the "portCfgGport port_number,1" command from a telnet session on the Brocade switch. The boot device can not be located more than two hops from the initiator involved in the boot process.
 39. Requires minimum PDC firmware 41.33.
 40. Qualified with only CX600, CX400, FC4500 and FC4700 with the switches listed in connectivity table, fabric or QuickLoop.
 41. The A6685A is not supported in slots 10/0 and 10/8 of the K570 and K580. In the K570 and K580, there are restrictions for the number of A6685A HBA cards supported when graphics cards are installed.
 42. For HP/UX 10.20 Driver J3630BA is required for A3404A, A3591A/B, A3740A, A6684A and A6685A adapters.
 43. HP-UX 10.20 requires patches (patches may be superceded or have co-dependencies as defined by HP):
PHKL_16751, PHKL_17590, PHSS_23581
NOTE: These patches must be installed before installing the driver, available at <http://us-support2.external.hp.com>. HSC Tachlite driver available at <http://www.software.hp.com>, under "drivers" and locate Fibre Channel HSC Tachlite adapter (A6684A or A6685A).
Depending on the patch level of the system, the following patches may be required:
PHKL_16957PHKL_21595PHCO_16591PHSS_20999
PHKL_17858PHKL_21661PHCO_18563PHNE_19936
PHKL_20611PHKL_23419PHCO_21186
Installation instructions available at:
http://www.software.hp.com/cgi-bin/swdepot_parser.cgi/cgi/displayProductInfo.pl?productNumber=A6685A&oper=install
Symm 6 is qualified with: HP-UX 11.00 Support Plus Sept '02 bundle = QPK1100 Sept '02 & HWXE1100 Sept '02
 44. Symm 6 is qualified with: HP-UX 11.00 Support Plus Sept '02 bundle = QPK1100 Sept '02 & HWXE1100 Sept '02
 45. FC-AL
 46. QuickLoop support: HP A5223A/AZ, HP A5224A/AZ using parameters outlined in connectivity table.
The A6795A HBA is capable of supporting both 1 and 2 Gb speeds.
QuickLoop is not supported with Brocade 3900/12000, or ED-12000B.
Auto-sensing capability on the HBA is permanently enabled. There is no option to disable auto-sensing on the HBA.

All switch ports participating in the Quickloop must be set to 1 Gbit speed.
 47. For HP/UX 11.00, minimum driver revision B.11.00.06.
 48. FC-AL direct attach 2-Gbit boot using A6795A is not supported.
 49. FC-SW 2-Gbit boot and/or dump using A6795A requires Auto-Negotiation flag to be enabled on the switch port the HBA is attached to.
 50. FC-AL direct attach boot support only at 1 Gb. Requires the boot device port to be configured for 1 Gb operation.
 51. Boot initialization negotiation at 1 Gb mode for Brocade switches.
FC-SW - HBA port on the switch must be locked as a "G" port and locked in auto-negotiation mode.
 52. Virtual Partitions (VPAR) is supported on the N-class/rp7400 server.
VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later.
 53. HP-UX 11.00 minimum driver revision B.11.00.06.
HP-UX 11i minimum driver revision B.11.11.06.
 54. Requires minimum PDC firmware 35.4 and PDHC 7.8 or higher
 55. Requires minimum PDC firmware 32.2 and PDHC 7.3 or higher
 56. Qualified on FC4500 and later. Requires Access Logix 6.32.11 (FC4500) or 8.42.5x (FC4700) or higher with data access control enabled and Navisphere Agent 5.2 or higher.
 57. HP-UX required patches: HP-UX 11.0 ACE: PHKL_23939, HP-UX 11i: PHKL_23626

- 58. Supported with CX600, CX400, FC4500 and FC4700. FC4700-2 supports both 1GB and 2GB modes. Restrictions apply in a boot environment.
- 59. HP A5158A FC-SW software requirements: FC-AL and FC-SW requires the HP A5158A Tachlite PCI Fibre Channel Adapter. The A5158A FCSW software fabric driver version "AP0301", for HP-UX 11i is now available for download from HP's software depot site, <http://www.software.hp.com> under "drivers". It is referred to as the "hp pci tachyon tl fibre channel adapter", and requires the installation of dependent patch PHKL_22874 prior to installing the fabric driver, patches may be superceded or have co-dependencies as defined by HP.
- 60. Requires minimum PDC firmware 42.09.
- 61. Fabric SAN boot supported.
- 62. Excludes the rp5470 (PA-8700).
- 63. PDC firmware 41.39 or higher; Arbitrated Loop (direct attach) or FC-SW
- 64. Requires minimum PDC firmware 42.06.
- 65. minimum firmware revisions –
CX600 – 02.05.1.60.5.xxx
CX400 – 02.05.1.40.5.xxx
- 66. Required Patch PHKL_28569, PHKL_26938 and 2port 2Gig driver version 11.11.01.
- 67. Host must be configured as a 64Bit operating system.
- 68. Firmware Version 3.02.162.
- 69. FC-AL supported with direct connect only
- 70. Driver Version 11.11.01.
- 71. QuickLoop support: HP A5223A/AZ, HP A5224A/AZ using parameters outlined in connectivity table.
The A6795A HBA is capable of supporting both 1 and 2 Gb speeds.
QuickLoop is not supported with Brocade 3900/12000, or ED-12000B.
Auto-sensing capability on the HBA is permanently enabled. There is no option to disable auto-sensing on the HBA.
- 72. QuickLoop support: HP A5223A/AZ, HP A5224A/AZ using parameters outlined in connectivity table.
The A6795A HBA is capable of supporting both 1 and 2 Gb speeds.
QuickLoop is not supported with Brocade 3200/3800/12000, DS-16B2 or ED-12000B.
Auto-sensing capability on the HBA is permanently enabled. There is no option to disable auto-sensing on the HBA.
- 73. HP-UX driver requirements: HP-UX 11.0 : A6684A/A6685A/A5158A/A6795A HP PCI Tachyon TL/XL2 Fibre Channel driver B.11.00.10 or later release which supports this HBA.
- 74. PDC firmware 15.5 or later
- 75. Virtual Partitions (VPAR) is supported on the rp8400 server with the Clariion CX600 and FC4700.
FC-AL only support, Requires PDC 16.009 or later. Fabric boot with PDC 16.12 or later

VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later.
- 76. 1GBit Quickloop supported beginning at firmware release v3.0.3h, all switch ports participating in the Quickloop must be set to 1 GBit speed.
- 77. Virtual Partitions (VPAR) is supported on the rp8400 server with the Clariion CX600 and FC4700.
FC-AL only support, Requires PDC 16.009 or later. Fabric boot with PDC 16.12 or later

VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later
- 78. HP-UX 11i v2.0 (HP-UX 11.23) is a IA-64 release and only runs on the HP Integrity rx family server.
- 79. Firmware Version 1.01a2.
- 80. Driver Version 1.01a9. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- 81. **The A6795A EFI driver must be upgraded to version 1.09 to support boot.**
- 82. **Driver Version 11.23.01**
- 83. **Minimum microcode revision level 5670.23.25. 5568 and 5669 are on a RPQ basis at this time.**

- Includes support for FC4700, FC4700–2, CX600, CX400.
- AIX 5.1–32/64 bit kernel supported. Requires CLArrayS3.5.1 fileset support.
- IBM 6227 and IBM 6228 adapters are supported on the same server. Mixed FC–AL and FC–SW are supported on the same server. 6227 Filesets: devices.pci/df1000f7.com, devices.pci/df1000f7.diag, devices.pci/df1000f7.rte ; 6228 Filesets: devices.pci/df1000f7.com, devices.pci/df1000f7.diag, devices.pci/df1000f9.diag, devices.pci/df1000f9.rte
- Requires minimum HBA firmware 3.82A1, CLArrayS3.5.1 fileset support. Supports FC4700 with minimum Flare code 8.46.xx .
- Firmware Version 3.82A1. Minimum supported level.
- FC–SW and FC–AL are supported on the same server.
- System/Service processor combined microcode Version 20020920 dated 11/19/2002 or later.
- Booting from a PowerPath device is supported with FC–SW topology only.
- Minimum Powerpath version 3.0.2. For Powerpath patches 3.0.x, the bootfix.sh script is required for boot support. See the EMC Primus case ID emc58038 for more details and the PowerPath Release Notes for installation
- AIX 5.1 ML1, APAR IY21957 or higher.
- For Powerpath version 3.0.3, minimum CLArray S3.5.1.0.6 version is required.
- Fibre boot when used under AIX 5.1 requires APAR IY40885 which can be obtained from IBM at <https://techsupport.services.ibm.com/server/fixes?view=pSeries>.
- System microcode CL020407 or later.
- System/Service processor combined microcode Version SST01256/SS010614 dated 10/23/2001 or later.
- System microcode MM020407 or later.
- System microcode CM020407 or later.
- System/Service processor combined microcode Version SPH02254/sh020307 dated 11/20/2002 or later.
- System/Service processor combined microcode Version RH020413 dated 05/22/2002 or later.
- System/Service processor combined microcode Version CLT02066/ct020307 dated 04/04/2002 or later.
- System/Service processor microcode Version RK021120 dated 12/11/2002 or later.
- Requires AIX 5.1 with minimum maintenance level 03 APAR 1Y32749.
- IBM Native Fibre Channel drivers with feature code 6227 and with feature code 6228 are supported on the same server. Feature 6228 and 6239 are supported on the same server. Mixed FC–AL and FC–SW are supported on the same server. 6227 filesets: devices.pci/df1000f7.com, devices.pci/df1000f7.diag, devices.pci/df1000f7.rte; 6228 filesets: devices.pci/df1000f7.com, devices.pci/df1000f7.diag, devices.pci/df1000f9.diag, devices.pci/df1000f9.rte; 6239 filesets: devices.pci/df1000f7.com, devices.pci/df1000f7.diag, devices.pci/df1080f9.diag, devices.pci/df1080f9.rte
- AIX 5.1 supported only with 32–bit kernel.
- Requires adapter firmware 3.82A1, CLArrayS3.5.1 fileset support. Supports FC4700 with minimum Flare code 8.46.xx.
- Requires adapter firmware 3.22A1, CLArrayS3.4.3.0.x fileset support. Supports FC4700 with minimum Flare code 8.46.xx .
- Firmware Version 3.22A1. Minimum supported level.
- IBM 6227 and IBM 6228 adapters are supported on the same server. Mixed FC–AL and FC–SW are supported on the same server. 6227 Filesets: devices.pci/df1000f7.com, devices.pci/df1000f7.diag, devices.pci/df1000f7.rte ; 6228 Filesets: devices.pci/df1000f7.com, devices.pci/df1000f7.diag, devices.pci/df1000f9.diag, devices.pci/df1000f9.rte
- The following link provides detailed data for all 9076–SP2 models and feature codes: http://www1.ibm.com/cgi-bin/master?request=salesmanual&parms=SMS&xh=NTZH*daEMSRi4n1USenGnN9332&xh=usa.main%7Csalesmanual%5E&type=D&search=9076&title=T&product
- System/Service processor combined microcode Version RR020822 dated 09/19/2002 or later.
- Requires minimum AIX 5.1 maintenance level 02.
- Minimum AIX 4.3.3 ML9, APAR IY22024
- For Powerpath version 3.0.3, minimum CLArray S3.4.3.0.8 version is required.
- Fibre boot when used under AIX 4.3 requires APAR IY42989 which can be obtained from IBM at <https://techsupport.services.ibm.com/server/fixes?view=pSeries>.
- System/Service processor combined microcode Version NAN02066/SC020308 dated 03/29/2002 or later.
- Requires adapter firmware 3.22A1, CLArrayS3.5.1 fileset support. Supports FC4700 with minimum flare code 8.46.xx.
- Requires minimum HBA firmware 3.82A1, CLArrayS3.4.3.0.x fileset support. Supports FC4700 with minimum Flare code 8.46.xx .
- System/Service processor combined microcode Version L02113/ag010611 or later.
- For all PCI–based hosts only: see HBA placement guidelines in the IBM document PCI Adapter Placement Reference SA38–0538–6, available at http://www-1.ibm.com/servers/eserver/pseries/library/hardware_docs/sa38/380538.pdf
- Requires CLArrayS3.5.2.0.6
- Fibre boot when used under AIX 5.2 requires APAR IY41028 which can be obtained from IBM at <https://techsupport.services.ibm.com/server/fixes?view=pSeries>.
- System/Service processor combined microcode Version RK030206 dated 03/31/2003 or later.
- Minimum microcode levels RH0 20413 dated 05/22/2002 or later.
- Requires AIX 5.1 with minimum maintenance level 04 APAR IY44478.
- Requires CLArrayS3.5.1.0.6 or higher
- Firmware Version 1.00X5. Minimum supported level.
- Requires CLArrayS3.5.2.0.7
- Requires AIX 5.2 with minimum maintenance level 01 APAR IY44479.
- For all PCI–based hosts only: See http://www-1.ibm.com/servers/eserver/pseries/library/hardware_docs/sa38/380538.pdf for appropriate HBA placement guidelines.
- AIX 5.2 32/64 bit kernel supported. Requires Minimum EMC ODM fileset support 5.0.0.0.**
- AIX 5.2 requires Operating System APAR# IY36782, IY37744 and IY37746 for support with HACMP and HACMP/ES version 4.5 and PSSP 3.5.**
- Requires AIX APAR IY48995
- See http://www.rs6000.ibm.com/resource/hardware_docs/sa38-0538/380538.pdf for appropriate HBA placement guidelines
- Requires minimum ODM fileset support (5.0.0.0 EMC Symmetrix Fibre Channel support software).
- IBM 6227 and 6228 adapters are supported on the same server. Mixed FC–AL and FC–SW are supported on the same server.

Microsoft Windows 2000

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non–disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).

- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

Bull

Bull – Microsoft Windows 2000						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
1	Express 5800: 320La, 320La-R, 320Lb, 320Lb-R, 330Ma-R, 330Mb-R, 340Ha-R	PCI	Microsoft Windows 2000 Advanced Server: SP2 ^{1, 2, 6} , SP3 ^{1, 2, 6}	QLogic QLA2310F-E-SP ^{7, 8}	FC-AL, FC-SW	N
2	Express 5800 180Rb7	PCI	Microsoft Windows 2000 Advanced Server: SP2 ^{1, 2} , SP3 ^{1, 2} , SP4 ¹ ; Microsoft Windows 2000 Server: SP2 ^{1, 2} , SP3 ^{1, 2} , SP4 ¹	Emulex LP8000-EMC ^{3, 4, 5}	FC-AL, FC-SW	Y

- 1. EMC recommends that HBAs of different vendors not be used in the same host server.
- 2. Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
- 3. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- 4. Supports Boot BIOS 1.63a2. ATF/CDE not supported with driver 2.21a0. For ATF/CDE, use driver 2.11a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- 5. Driver Version 2.21a7.
- 6. Refer to the Stratus, Bull or NEC documentation for hardware, software and non-storage related setup and configuration.
- 7. Qlogic SANSurfer/SANBlade Manager is not supported.
- 8. Driver Version 8.2.3.21.

- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supports Boot BIOS 1.63a2. ATF/CDE not supported with driver 2.21a0. For ATF/CDE, use driver 2.11a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Driver Version 2.21a7.
- If using ATF/CDE, requires 2.1.6 or greater.
- Driver Version 8.2.3.21.
- Supported by direct attach only
- PowerPath supported. ATF/CDE not supported.
- Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- Not supported with Emulex LP8000-EMC HBA.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- PowerPath not supported. ATF is supported only using Emulex 5-2.11a2 driver.
- If using Dell PERC Controller, requires PERC 3 with OpenManager 3.0 and Array Manager 3.1. The afamgt.sys must be version 2.6.0.3486 (or above)..
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Driver Version 8.2.1.20.
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Firmware Version 1.80a3.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.

- PowerPath supported. ATF/CDE not supported.
- Driver Version 8.2.3.21.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- If using ATF/CDE, requires 2.1.6 or greater.
- Supported by direct attach only
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- Driver Version 2.21a7.
- Supports Boot BIOS 1.63a2. ATF/CDE not supported with driver 2.21a0. For ATF/CDE, use driver 2.11a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.**
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Requires minimum BIOS v4.01 rev A (5/17/2002) for use with Emulex HBAs.
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- Includes both Pentium PRO and XEON models
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
- Supports BIOS 1.34. Supports SNIA HBA API. Driver and BIOS available at <http://www.qlogic.com>.**
- Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

- NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
 - Firmware Version 3.90a7.
 - Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
 - Driver Version 8.2.1.20.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 - Firmware Version 1.80a3.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**
 - Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. Supports SNIA HBA API.**
 - EMC does not support the Emulex equivalent of the FCA2101 (LP952.) Use EMC supported driver for LP9002 from <http://www.emulex.com>.**
 - Firmware Version 3.90a7. Contact HPQ for supported firmware versions for this HBA.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
- This HBA is equivalent to the qLogic QLA2310.
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Driver Version 8.2.3.21.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Supported by direct attach only
- PowerPath supported. ATF/CDE not supported.
- This HBA is equivalent to the qLogic QLA2340.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- For IBM xSeries Servers running Windows NT and Windows 2000 with IBM ServerRaid controller 4M, the ServerRaid Driver must be 6.00 or above for use with EMC PowerPath 3.0 and above. IBM driver can be downloaded at: <http://www-3.ibm.com/pc/support/site.wss/document.do?Indocid=MIGR-39723>
- Driver Version 2.21a7.
- Firmware Version 1.01a2.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Supports Boot BIOS 1.63a2. ATF/CDE not supported with driver 2.21a0. For ATF/CDE, use driver 2.11a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- If using ATF/CDE, requires 2.0.9 or greater.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- If using ATF/CDE, requires 2.1.6 or greater.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- This server only supports 5 Volt HBAs: qLogic 22XX family, qLogic 23XX family, Emulex LP8000, and Emulex LP850
- EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
- Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.
- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.
- When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
- Due to the HS20's embedded FC-SW design, EMC Access Logix is required to assign LUNS to each individual blade server.
 - Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
 - Driver Version 8.2.1.20.
 - Driver Version 8.1.5.20.
 - For IBM Netfinity and xSeries Intel servers only.
 - (QLA2200) For IBM xSeries and Netfinity servers only.
 - Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
 - Firmware Version 3.90a7.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 - Firmware Version 1.80a3.
 - Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)
 - Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- Refer to the Stratus, Bull or NEC documentation for hardware, software and non-storage related setup and configuration.
- Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
- Qlogic SANSurfer/SANBlade Manager is not supported.
- Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.

By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.

The workaround is to perform "symcfg discover" after rebooting.

6. Driver Version 8.2.3.21.

7. Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.

NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.

8. Firmware Version 3.90a7.

9. Driver Version 2.21a7.

10. The Emulex LP9xxx HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.

11. QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).

12. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.

13. Qlogic SanBlade Manager is not supported.

14. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.

15. Driver Version 8.2.1.20.

16. Supported by direct attach only
17. The LP9002-E now ships with the LP9002L-E low profile adapter.
18. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
19. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
20. Firmware Version 1.01a2.
21. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
22. Firmware Version 1.80a3.
23. **Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**
24. Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.

Unisys – Microsoft Windows 2000						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
44	ES7000/200	PCI	Microsoft Windows 2000 Server: SP3 ^{1, 2} , SP4 ¹	QLogic QLA2310F-E-SP ^{3, 7, 17}	FC-AL ⁹ , FC-SW	Y

- EMC recommends that HBAs of different vendors not be used in the same host server.
 - Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.**
 - QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
 - Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
 - Driver Version 2.21a7.
 - Firmware Version 1.01a2.
 - Driver Version 8.2.3.21.
 - The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
 - Supported by direct attach only
 - The LP9002-E now ships with the LP9002L-E low profile adapter.
 - Firmware Version 3.90a7.
 - The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
 - PowerPath not supported. ATF is supported only using Emulex 5-2.11a2 driver.
 - If using ATF/CDE, requires 2.1.6 or greater.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 - Supports Boot BIOS 1.63a2. Emulex drivers are available at <http://www.emulex.com>. For Unisys servers, use driver available at <http://www.support.unisys.com>. Supports SNIA HBA API.
- NOTE: LP8000/850 HBAs without -EMC label must have minimum rev. dragonfly 2.0 of the Emulex ASIC.
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
 - Hardware and adapters similar to Unisys ES7000-100, ES7000-200.
 - The Libra 18x includes native MCP, and Virtual Machine for MCP (Windows MCPvm) partitions
 - Firmware Version 1.80a3.
 - Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.**

Microsoft Windows 2003

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non-disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

Bull

Bull – Microsoft Windows 2003						
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot
1	Express 5800: 320Lb, 320Lb-R, 330Mb-R ^{11, 12} , 340Ha-R	PCI	Microsoft Windows 2003: Enterprise Edition (Advanced Server) ⁷ , Standard Edition (Server) ⁷	QLogic QLA2310F-E-SP ^{8, 9, 10}	FC-AL, FC-SW	N
2	NovaScale: 4020 (Itanium2), 4040 (Itanium2), 5080 (Itanium2), 5160 (Itanium2)	PCI-X	Microsoft Windows 2003 64-Bit: Enterprise Edition (Advanced Server), Standard Edition (Server)	Emulex LP9802-E ¹ , 2, 3, 4, 5, 6	FC-AL, FC-SW	N

- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- PowerPath requires driver 1.01x1 with Firmware 1.01A2 and StorPORT fix Q823728
- Driver Version Emulex StorPORT driver v1.01x1.
- Driver Version Emulex SCSI port driver v2.21a7.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- QLogic SANSurfer/SANBlade Manager is not supported.
- Supports Stratus OS 1.3.X through 2.1.X.
- Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.

- No EMC Layered Applications supported on IA64 server platforms
- Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Firmware Version 1.01a2.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Firmware Version 3.90a7.

6. Driver Version 1.01x. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
7. Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
8. **EMC recommends that HBAs of different vendors not be used in the same host server.**
9. **Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.**
10. Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
11. Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
12. Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
13. **Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.**
14. Firmware Version 1.80a3.
15. **Includes both Pentium PRO and XEON models**
16. **Supports Boot BIOS 1.63a2. Supports SNIA HBA API.** Available at <http://www.emulex.com>.
17. Driver Version 2.21a7. EMC does not support the Emulex equivalent of the FCA2101 (LP952.) Use EMC supported driver for LP9002 from <http://www.emulex.com>.
18. Firmware Version 3.90a7. Contact HPQ for supported firmware versions for this HBA.

- No EMC Layered Applications supported on IA64 server platforms
- Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- This HBA is equivalent to the QLogic QLA2340.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- This HBA is equivalent to the Emulex LP982.
- Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Firmware Version 1.01a2.
- CX200 available through selected channels.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- QLogic SanBlade Manager is not supported.
- QLogic SANSurfer/SANBlade Manager is not supported.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- Bus Enumeration Issue Causes Problems with SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.

By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.

By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.

The workaround is to perform "symcfg discover" after rebooting.

- Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
- Firmware Version 3.90a7.
- Driver Version 1.01x1. Supports Boot BIOS 1.63a2. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
- Driver Version 2.21a7. Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Firmware Version 1.80a3.
- Supports Stratus OS 1.3.X through 2.1.X.
- Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
- EMC does not support the Emulex equivalent of N8190-105. Check with NEC on where to download the latest supported firmware and boot BIOS for this adapter.
- Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.

Samsung

Samsung – Microsoft Windows 2003							
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot	Comments
1	ES470; ES570	PCI, PCI-X	Microsoft Windows 2003 64-Bit: DataCenter, Enterprise Edition (Advanced Server), Standard Edition (Server)	Emulex LP982-E ^{2, 3, 4} ; QLogic QLA2340-E-SP ^{2, 5}	FC-AL, FC-SW	N	See ¹

1. No EMC Layered Applications supported on IA64 server platforms
2. For Windows 2003 STORPort drivers, support is limited to the following configurations: 1 HBA with 1 path to 1 SP; 2 HBAs, one with a single path to SPA and the other with a single path to SPB. Refer to HBA guides for expected device behavior. [NOTE: Powerpath not currently supported with STORPort driver.]
3. Driver Version 1.01x1. Available at <http://www.emulex.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]
4. Firmware Version 1.01a2.
5. Driver Version 8.2.3.27. Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]

Stratus

Stratus – Microsoft Windows 2003							
No.	Host System	Host Bus	Operating System	Host Bus Adapter	Adapter Type	External Boot	Comments

9. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
10. Driver Version 8.2.3.21. Supports BIOS 1.34. Available at <http://www.qlogic.com>. NOTE: Powerpath is supported with this driver.
11. Firmware Version 1.80a3.

Microsoft Windows NT

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non-disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Firmware Version 1.01a2.
- Driver Version 2.20a12.
- HBA BIOS is 1.34.
- Driver/BIOS are available at <http://www.qlogic.com>
- Driver Version 8.1.5.21.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Requires BIOS v4.01 rev A (5/17/2002) for use with Emulex HBAs.
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supports Boot BIOS 1.63a2. ATF/CDE not supported with driver 2.21a0. For ATF/CDE, use driver 2.11a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Firmware Version 3.90a7.
- If using ATF/CDE, requires 2.0.9 or greater.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- Includes both Pentium PRO and XEON models
- Driver Version 2.20a12. Supports Boot BIOS 1.63a2. ATF/CDE not supported with driver 2.21a0. For ATF/CDE, use driver 2.11a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>. NOTE: Powerpath is supported with this driver.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.

- EMC recommends that HBAs of different vendors not be used in the same host server.
- HBA BIOS is 1.34.
- Driver/BIOS are available at <http://www.qlogic.com>
- This HBA is equivalent to the qLogic QLA2310.
- Driver Version 8.1.5.21.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- Firmware Version 1.01a2.
- It is recommended that the QLogic QLA2340 is not installed in Slot 1.
- For IBM xSeries Servers running Windows NT and Windows 2000 with IBM ServerRaid controller 4M, the ServerRaid Driver must be 6.00 or above for use with EMC PowerPath 3.0 and above. IBM driver can be downloaded at: <http://www-3.ibm.com/pc/support/site.wss/document.do?lnocid=MIGR-39723>
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Drivers available at <http://www.emulex.com>.
- Driver Version 2.20a12.
- This HBA is equivalent to the qLogic QLA2340.
- If using ATF/CDE, requires 2.0.9 or greater.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Supports Boot BIOS 1.63a2. ATF/CDE not supported with driver 2.21a0. For ATF/CDE, use driver 2.11a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Firmware Version 3.90a7.
- QLogic 23xx, and Emulex LP9xxx families for use in servers running Pentium II and faster CPUs only (PII, PIII, etc.).
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- PowerPath supported. ATF/CDE not supported.

- Edit config.sys with the following: Files=100 Buffers=99
- When installing NetWare for fabric boot (when operating system is not installed in the local host) on the Symmetrix, create only one LUN and then perform the install. To install a second server that will be fabric boot, repeat the process by creating one additional LUN and then loading the operating system to it. Continue this process until the desired number of fabric boot servers have been reached. Conditions exist where several LUNs are initially created and you perform your first install, NetWare will sometimes acquire and stripe the operating system across several of the newly created LUNs.
- FC-SW applies only to CX600, CX400, CX200, FC4500, FC4700 and FC5300. FC5300 with FC-SW available from selected channels.
- Requires NetWare patches: NWPAPT2A and NSS5J.
- Novell Storage Services supported.
- Powerpath & ATF supported.
- FC-SW environments using Brocade 2800 or EMC DS-16B require switch firmware 2.5.0d or greater.
- Remote boot not supported with PERC controllers enabled in system BIOS.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- To enable failover with fabric boot DOSFAT.NSS must be loaded from the autoexec.ncf. In a failed condition the c:\ partition will not failover correctly but the DOSFAT_C: partition will.
- PowerPath and ATF supported.
- NetWare boot support is contingent on migration of the DOS boot partition to an NSS partition. NetWare will warn you of the possibility of data corruption if you convert the DOS boot partition to an NSS partition. The risk of data corruption is during I/O to the C: drive while in the NetWare debugger, or while writing reboot log files during an "Auto Restart After Abend". When you load DOSFAT, please set "Auto Restart After Abend" to 0 to avoid the possibility of data corruption.
- Maximum number of NWFS volumes that can be mounted is 64.
- Driver installation with NetWare 5.0 SP6A: Do not load cpqmpk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- Driver Version 6.51a.
- Driver Version v6.51a.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- Support for CX600, CX400, FC4500, FC4700, and FC5300. (FC5300 requires copper to Fibre transceiver.)
- PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
- DOS boot device maximum accessible capacity is 2GB. Netware SYS volume must be in LUN 0.
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
- PowerPath supported. ATF/CDE not supported.
- Driver Version 6.v. Supports persistent binding and only supports Class 3.
- Driver Version 6.50v.
- This HBA is equivalent to the qLogic QLA2310.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- (QLA2200) For IBM xSeries and Netfinity servers only.
- Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.**
- HPQ Proliant servers with ATF and Powerpath requires use of SCSIHD in place of CPQSHD.
- For ATF on Pre CX series, Multipath support or connections to the secondary port are not supported at this time. One path per SP, 2 HBAs per host.
- Requires HBA bios 1.83.**
- Requires HBA firmware revision 1.83, available at <http://www.qlogic.com>**
- Requires SP4 or higher for NetWare 5.00.**
- Driver installation with NetWare 5.0 SP6A: Do not load cpqmpk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- Firmware Version v1.34.
- Requires NWPA.NLM V.3.07A update from Novell website.
- PowerPath not currently supported.
- Requires BIOS version 2.02e.
- Driver Version 3.90a7.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
- Firmware Version 1.34.

- Edit config.sys with the following: Files=100 Buffers=99
- When installing NetWare for fabric boot (when operating system is not installed in the local host) on the Symmetrix, create only one LUN and then perform the install. To install a second server that will be fabric boot, repeat the process by creating one additional LUN and then loading the operating system to it. Continue this process until the desired number of fabric boot servers have been reached. Conditions exist where several LUNs are initially created and you perform your first install, NetWare will sometimes acquire and stripe the operating system across several of the newly created LUNs.
- FC-SW applies only to CX600, CX400, CX200, FC4500, FC4700 and FC5300. FC5300 with FC-SW available from selected channels.
- Novell Storage Services supported.
- Powerpath & ATF supported.
- FC-SW environments using Brocade 2800 or EMC DS-16B require switch firmware 2.5.0d or greater.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- To enable failover with fabric boot DOSFAT.NSS must be loaded from the autoexec.ncf. In a failed condition the c:\ partition will not failover correctly but the DOSFAT_C: partition will.
- PowerPath and ATF supported.
- NetWare boot support is contingent on migration of the DOS boot partition to an NSS partition. NetWare will warn you of the possibility of data corruption if you convert the DOS boot partition to an NSS partition. The risk of data corruption is during I/O to the C: drive while in the NetWare debugger, or while writing reboot log files during an "Auto Restart After Abend". When you load DOSFAT, please set "Auto Restart After Abend" to 0 to avoid the possibility of data corruption.
- Maximum number of NWFS volumes that can be mounted is 64.
- Requires NetWare patches: NWPAPT2A and NSS5J.
- Driver installation with NetWare 5.0 SP6A: Do not load cpqmpk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Support for CX600, CX400, FC4500, FC4700, and FC5300. (FC5300 requires copper to Fibre transceiver.)
- Driver and documentation available from http://www.qlogic.com/support/foem_detail_all.asp?oemid=65**
- Driver Version v6.51a.
- Driver Version 6.51a.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- HPQ Proliant servers with ATF and Powerpath requires use of SCSIHD in place of CPQSHD.
- Requires HBA bios 1.83.**
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.

27. PowerPath supported. ATF/CDE not supported.
28. HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
29. **Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.**
30. PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
31. Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
32. Includes both Pentium PRO and XEON models
33. This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
34. Firmware Version v1.34.
35. Requires NWPA.NLM V.3.07A update from Novell website.
36. PowerPath not currently supported.
37. Requires BIOS version 2.02e.
38. Driver Version 3.90a7.
39. Driver installation with NetWare 5.0 SP6A: Do not load cpmpk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
40. Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
41. **Qlogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
42. Firmware Version 1.34.

- Maximum number of NWFS volumes that can be mounted is 64.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- Requires HBA bios 1.83. Driver and documentation available from www.qlogic.com.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- Driver Version 6.v. Supports persistent binding and only supports Class 3.
- Driver Version 6.50v.
- Driver Version 6.51a.
- Supported in "Shared HBA" topology. Single HBA may be zoned to more than one storage array. This included arrays of different types and/or models.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- Driver installation with NetWare 5.0 SP6A: Do not load cpqmpk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- Driver and documentation available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Driver Version v6.51a.
- Requires NetWare patches: NWPAPT2A and NSS5J.
- Support for CX600, CX400, FC4500, FC4700, and FC5300. (FC5300 requires copper to Fibre transceiver.)
- This HBA is equivalent to the qLogic QLA2310.
- Host must be offline for CLARiiON-licensed (Flare) upgrade and Storage Processor replacement.
- This HBA is equivalent to the qLogic QLA2340.
- Requires BIOS 1.34 available from QLogic at <http://www.qlogic.com>.
- PCI-X servers must use single 5 volt PCI slot for Adaptec 2944 family.
- This server only supports 5 Volt HBAs: qLogic 22XX family, qLogic 23XX family, Emulex LP8000, and Emulex LP850
- HPQ Proliant servers with ATF and Powerpath requires use of SCSIHD in place of CPQSHD.
- Firmware Version v1.34.
- Requires NWPANLM V.3.07A update from Novell website.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- PowerPath not currently supported.
- Requires BIOS version 2.02e.
- Driver Version 3.90a7.
- Novell Storage Services supported.
- Driver installation with NetWare 5.0 SP6A: Do not load cpqmpk.psm when prompted. At the point when you are to load idecd, ideata and scsihd, toggle to the Control prompt with <Alt-Esc>. Once at the system control, unload nwpa.nlm, then load nwpa.nlm version 3.07a 5/3/01. Once the new nwpa.nlm is loaded, toggle back to the install screen and continue with the install. When install is complete, down the server and copy nwpa.nlm version 3.07a 5/3/01 to the c:\nwserver directory and reboot.
- PowerPath and ATF supported.
- Supports Boot BIOS 1.63a2. Supports SNIA HBA API. Available at <http://www.emulex.com>.
- Requires HBA bios 1.83.
- QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.
- Firmware Version 1.34.

- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Host must be offline for CLARiiON–licensed (Flare) upgrade and Storage Processor replacement.
- Supported with QLogic driver v6.05.00.
- Requires v6.0.5 or higher Navisphere host Agent/CLI.
- An RPM from Dell may be used to install the QLogic v6.05.00 driver and may be obtained from the QLogic website at http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS v1.83 for QLA2200F and BIOS v1.34 for QLA2310F, QLA2340–E–SP, and QLA2342–E–SP available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- Requires BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- Requires v6.2.1 or higher Navisphere host agent/CLI.
- This kernel is limited to 110 devices, not 128.
- Requires QLogic driver 4.47.18 driver disk, dd.img–i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Only one HBA is qualified for use in the Linux host when booting from the CLARiiON via fabric.
- Access Logic required, direct connect or fabric, (no booting through switch inter–switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- Driver Version v6.x series. Supports persistent binding and only supports Class 3.
- Driver Version v6.05.00.
- Requires QLogic driver 4.47.18 and BIOS 1.83.
- Install with driver provided by RedHat Installer and upgrade to the EMC–approved driver after installation.
- Requires v6.05 or higher Navisphere host agent/CLI.
- This system is supported with Red Hat 2.1 Advanced Server v2.4.9–E.3 and updated with v2.4.9–E.9, E.10, and E.12 RPMs.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- FCode value 1.63a2.
- Single HBA zoning is required regardless of the switch being utilized.
- Driver Version 1.23a.
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- Driver Version v6.04.01.
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- Requires QLogic driver v6.04.01 (included in 2.4.9–e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- FC–AL and FC–SW can run concurrently on separate HBAs on the same Host.
- The LP9002–E now ships with the LP9002L–E low profile adapter.
- Firmware Version 3.90a7.
- FCode value 1.63a.
- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
- Firmware Version 1.80a2.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Firmware Version v3.90a7.
- Driver Version v1.22e.
- Firmware Version 1.02a0.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- Firmware Version 1.80a3.
- Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.**

- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Host must be offline for CLARiiON-licensed (Flare) upgrade and Storage Processor replacement.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Driver Version v6.x series. Supports persistent binding and only supports Class 3.
- Driver Version v6.05.00.
- Includes both Pentium PRO and XEON models
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- Requires v6.0.5 or higher Navisphere host Agent/CLI.
- Supported with QLogic driver v6.05.00.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Requires QLogic driver v6.04.01 (included in 2.4.9–e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- Requires v6.2.1 or higher Navisphere host agent/CLI.
- Single HBA zoning is required regardless of the switch being utilized.
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- This kernel is limited to 110 devices, not 128.
- Requires QLogic driver 4.47.18 driver disk, dd.img-i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Only one HBA is qualified for use in the Linux host when booting from the CLARiiON via fabric.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- This system is supported with Red Hat 2.1 Advanced Server v2.4.9–E.3 and updated with v2.4.9–E.9, E.10, and E.12 RPMs.
- Requires QLogic driver 4.47.18 and BIOS 1.83.
- Install with driver provided by RedHat Installer and upgrade to the EMC-approved driver after installation.
- The kernel version listed is included in the corresponding standard distributed release.
- Requires v6.05 or higher Navisphere host agent/CLI.
- For fabric boot support, install with driver provided by RedHat Installer and upgrade to the EMC-approved driver after installation.
- Requires QLogic driver v6.05.00 and BIOS v1.83 for QLA2200F and BIOS v1.34 for QLA2310F, QLA2340-E-SP, and QLA2342-E-SP available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- Requires BIOS v1.83 for QLA2200F and BIOS v1.34 for QLA2310F, QLA2340-E-SP, and QLA2342-E-SP available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- This HBA is equivalent to the qLogic QLA2310.
- Driver Version v6.04.02.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
- Driver Version 1.23a.
- FCode value 1.63a2.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- Driver Version v6.04.01.
- FCode value 1.63a.
- Firmware Version 3.90a7.
- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
- Firmware Version 1.80a2.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Firmware Version 1.01a2.
- Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- PowerPath v3.02 not supported on this system.
- Firmware Version 1.02a0.
- Driver Version v1.22e.
- Firmware Version v3.90a7.
- Driver Version v6.04.01. Supports persistent binding and only supports Class 3.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- Firmware Version 1.80a3.

- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
 - EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
 - Host must be offline for CLARiiON-licensed (Flare) upgrade and Storage Processor replacement.
 - Requires v6.0.5 or higher Navisphere host Agent/CLI.
 - Supported with QLogic driver v6.05.00.
 - Driver Version v6.x series. Supports persistent binding and only supports Class 3.
 - Driver Version v6.05.00.
 - QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
 - BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
 - This server only supports 5 Volt HBAs: qLogic 22XX family, qLogic 23XX family, Emulex LP8000, and Emulex LP850
 - PowerPath v3.02 not supported on this system.
 - This system is supported with Red Hat 2.1 Advanced Server v2.4.9-E.3 and updated with v2.4.9-E.9, E.10, and E.12 RPMs.
 - PowerPath v3.0.2 b069 is not supported on this system.
 - Requires BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
 - This HBA is equivalent to the qLogic QLA2310.
 - Driver Version v6.04.02.
 - Requires v6.2.1 or higher Navisphere host agent/CLI.
 - This kernel is limited to 110 devices, not 128.
 - Requires QLogic driver 4.47.18 driver disk, dd.img-i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
 - Only one HBA is qualified for use in the Linux host when booting from the CLARiiON via fabric.
 - Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
 - No MirrorView or SnapView used on boot LUNs.
 - EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
 - Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
 - Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
 - For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
 - FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
 - (QLA2200) For IBM xSeries and Netfinity servers only.
 - This HBA is equivalent to the qLogic QLA2340.
 - Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
 - For fabric boot support, install with driver provided by RedHat Installer and upgrade to the EMC-approved driver after installation.
 - Requires QLogic driver v6.05.00 and BIOS v1.83 for QLA2200F and BIOS v1.34 for QLA2310F, QLA2340-E-SP, and QLA2342-E-SP available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
 - This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
 - Requires QLogic driver 4.47.18 and BIOS 1.83.
 - Install with driver provided by RedHat Installer and upgrade to the EMC-approved driver after installation.
 - The kernel version listed is included in the corresponding standard distributed release.
 - This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
 - Single HBA zoning is required regardless of the switch being utilized.
 - Requires QLogic driver v6.04.01 (included in 2.4.9-e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
 - Driver Version v6.04.01.
 - Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
 - Driver Version 1.23a.
 - FCCode value 1.63a2.
 - Emulex driver and BIOS available from <http://www.emulex.com>.
 - QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
 - The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
 - This HBA is equivalent to the QLogic QLA2200.
 - FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
 - The LP9002-E now ships with the LP9002L-E low profile adapter.
 - Firmware Version 3.90a7.
 - FCCode value 1.63a.
 - Linux v2.4.x Kernels support a maximum of 128 devices per system.
 - Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
 - Firmware Version 1.80a2.
 - Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
 - Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.
 - Due to the HS20's embedded FC-SW design, EMC Access Logix is required to assign LUNS to each individual blade server.
 - When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"
- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
- EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
 - Driver Version 6.04.01.
 - EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
 - Install with driver provided by Red Hat 7.2 Installer and upgrade to the EMC-approved driver after installation.
 - Firmware Version v3.90a7.
 - Driver Version v1.22e.
 - Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
 - Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**
 - QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
 - Firmware Version 1.02a0.
 - Firmware Version 1.80a3.
 - Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.**

- Requires v6.2.1 or higher Navisphere host agent/CLI.
- Supported with QLogic driver v6.05.00.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPO.
- This kernel is limited to 110 devices, not 128.
- Requires QLogic driver 4.47.18 driver disk, dd.img-i686.gz and BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Only one HBA is qualified for use in the Linux host when booting from the CLARiiON via fabric.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
- Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Host must be offline for CLARiiON-licensed (Flare) upgrade and Storage Processor replacement.
- Requires BIOS 1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65**
- Requires v6.0.5 or higher Navisphere host Agent/CLI.
- BIOS v1.83 for QLA22xx and BIOS v1.34 for QLA23xx available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- Driver Version v6.x series: Supports persistent binding and only supports Class 3.
- Driver Version v6.05.00.
- Requires QLogic driver 4.47.18 and BIOS 1.83.
- Install with driver provided by RedHat Installer and upgrade to the EMC-approved driver after installation.
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- Single HBA zoning is required regardless of the switch being utilized.
- Requires QLogic driver v6.04.01 (included in 2.4.9-e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- FCode value 1.63a2.
- Driver Version 1.23a.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- Driver Version v6.04.01.
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
- FCode value 1.63a.
- Firmware Version 3.90a7.
- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- Firmware Version 1.80a2.
- Boot BIOS 1.63a2 supported for external boot. Available at <http://www.emulex.com>.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Driver Version v1.22e.
- Firmware Version v3.90a7.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- Firmware Version 1.02a0.
- Firmware Version 1.80a3.
- Requires Emulex BIOS 1.61a1 available from <http://www.emulex.com>.**
- Supports Stratus OS 2.0.X through 2.1.X.**
- Supports Stratus OS 1.3.X through 2.1.X.**
- Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.**

1. Linux v2.4.x Kernels support a maximum of 128 devices per system.
2. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
3. Requires rev1_sles8sp2a.patch for CLARiiON-attached hosts available from ftp://ftp.emc.com/pub/elab/linux.
4. Single HBA zoning is required regardless of the switch being utilized.
5. QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
6. Requires BIOS 1.34 available from http://www.qlogic.com.
7. Driver Version 6.05.00.
8. Supports BIOS 1.83. Available at http://www.qlogic.com. Supports SNIA HBA API.

9. PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
10. Requires BIOS 1.34 available from QLogic at <http://www.qlogic.com>.
11. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
12. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
13. Emulex driver and BIOS available from <http://www.emulex.com>.
14. QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.
15. Driver Version 1.23a.
16. Firmware Version 1.01a2.
17. FCode value 1.63a2.
18. QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
19. Firmware Version 1.80a3.
20. Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
21. Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
22. No MirrorView or SnapView used on boot LUNs.
23. EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
24. Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
25. For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
26. An RPM from Dell may be used to install the QLogic v6.05.00 driver and may be obtained from the QLogic website at http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
27. Firmware Version 3.90a7.

- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiiON–attached hosts available from ftp://ftp.emc.com/pub/elab/linux.
- Driver Version 6.05.00.
- Compaq servers that are rack–mountable (designated by Compaq with an "R") are supported.
- Single HBA zoning is required regardless of the switch being utilized.
- QLLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
- Requires BIOS 1.34 available from http://www.qlogic.com.
- Supports BIOS 1.83. Available at http://www.qlogic.com. Supports SNIA HBA API.
- Includes both Pentium PRO and XEON models
- HPQ Proliant servers that are rack–mountable (designated with an "R") are supported.
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32–bit, this shielding prohibits 64–bit HBAs from properly seating in the PCI slots. To accommodate 64–bit HBAs, this shielding must be removed, or modified to allow the 64–bit HBA to fully seat in the 32–bit slots. Requires BIOS 1.34 available from QLogic at http://www.qlogic.com.
- Dual port PCI–X fibre channel mezzanine card option is embedded. No PCI/PCI–X slots available.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- FCode value 1.63a2.
- Firmware Version 1.01a2.
- Driver Version 1.23a.
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from http://www.emulex.com.
- QLLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.
- Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
- Access Logic required, direct connect or fabric, (no booting through switch inter–switch links)
- No MirrorView or SnapView used on boot LUNs.
- EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- Firmware Version 1.80a3.
- QLLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
- Firmware Version 3.90a7.

- Linux v2.4.x Kernels support a maximum of 128 devices per system.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiiON-attached hosts available from [ftp://ftp.emc.com/pub/elab/linux](http://ftp.emc.com/pub/elab/linux).
- Driver Version 6.05.00.
- Single HBA zoning is required regardless of the switch being utilized.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
- Requires BIOS 1.34 available from <http://www.qlogic.com>.
- Supports BIOS 1.83. Available at <http://www.qlogic.com>. Supports SNIA HBA API.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- Requires BIOS 1.34 available from Qlogic at <http://www.qlogic.com>.
- Supports IBM BIOS 1.35. Available at <http://www.qlogic.com>.
- Due to the HS20's embedded FC-SW design, EMC Access Logix is required to assign LUNS to each individual blade server.
- When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.
 - EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
 - EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
 - Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)
 - Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.
 - FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.

20. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
21. Emulex driver and BIOS available from <http://www.emulex.com>.
22. QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.
23. Driver Version 1.23a.
24. Firmware Version 1.01a2.
25. FCode value 1.63a2.
26. QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
27. Firmware Version 1.80a3.
28. Optical cables apply to CX600, CX400, CX200, FC4700, FC4500, FC5300 with MIA.
29. Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
30. No MirrorView or SnapView used on boot LUNs.
31. EMC recommends boot LUN be RAID1 or RAID5. Be sure to monitor the loading on the boot LUN RAID group. Excessive loading on the boot LUN RAID group may degrade boot LUN performance and stability.
32. Refer to the Customer Service website or your EMC Service Personnel for the latest documentation.
33. Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
34. For any CLARiiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
35. This system is supported with Red Hat 2.1 Advanced Server v2.4.9-E.3 and updated with v2.4.9-E.9, E.10, and E.12 RPMs.
36. PowerPath v3.0.2 b069 is not supported on this system.
37. PowerPath v3.02 not supported on this system.
38. Firmware Version 3.90a7.

1. Linux v2.4.x Kernels support a maximum of 128 devices per system.
2. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPK.
3. Requires rev1_sles8sp2a.patch for CLARiiON-attached hosts available from <ftp://ftp.emc.com/pub/elab/linux>.
4. Driver Version 6.05.00.
5. 64-bit slots for 3.3v HBAs only.
6. Single HBA zoning is required regardless of the switch being utilized.
7. QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
8. Requires BIOS 1.34 available from QLogic at <http://www.qlogic.com>.
9. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
10. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
11. Emulex driver and BIOS available from <http://www.emulex.com>.
12. QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.
13. Driver Version 1.23a.
14. Firmware Version 1.01a2.
15. FCode value 1.63a2.
16. Firmware Version 1.80a3.
17. QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
18. Firmware Version 3.90a7.

- Sun "clone" hosts are not supported
- Veritas DMP coexistence with EMC CLARiiON failover packages:
VERITAS DMP can be enabled and coexist on the same host with ATF or PowerPath. VERITAS Volume Manager 3.5 is the currently recommended version.
VERITAS DMP, as part of Volume Manager 3.2, can be used to manage CLARiiON arrays without ATF or PowerPath by using CLR-ASL.
- Emulex LP8000-EMC/LP9002-E/LP9002L-E/LP9002DC-E/LP9802-E requires firmware code 1.40a0. Emulex LP9002S-E requires firmware code 2.40a0.
- Requires at least Rev 03 of LP8000-N1 HBA (part # 118031355-03)
- PCI Boot support is from 1 or 2 servers for FC-AL and from 1 to 4 servers for FC-SW.
- Note: Boot with DS-8B/DS-16B switches using 2.2.1a or 2.3 switch firmware requires HBA firmware v1.12a1 or higher.
- EMC required Sun patches for Solaris 8:
108528-26 SunOS 5.8: kernel update patch.
108974-36 SunOS 5.8: data, uata, dad, sd, and scsi patch.
109657-09 SunOS 5.8: isp driver patch (for X1062A and X1065A HBAs only).
109885-14 SunOS 5.8: glm driver patch (for X6541A HBA only).
- For new installations, core software minimum requirement with CX600
Array software – Access Logix 02.02.1.60.5.005
Array software – Non-Access Logix 02.02.0.60.5.005

- CX400
 Array software – Access Logix 02.02.1.40.5.006
 Array software Non-Access Logix 02.02.0.40.5.006
9. Support for CX600, CX400, FC4500, FC4700, and FC5300. (FC5300 requires copper to Fibre transceiver.)
 10. See the EMC price book for HBA vendor ordering information. This HBA is not sold by EMC.
 11. Driver Version 5.02c.
 12. Firmware Version 3.91a3.
 13. FC–AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
 14. FC–AL and FC–SW topologies can co-exist on the same server but not on the same HBA, provided that the different topologies are attached to different HBAs
 15. FC–AL and FC–SW can run concurrently on separate HBAs on the same Host.
 16. FC–SW applies only to CX600, CX400, FC4500 and FC4700
 17. Driver Version 4.13.
 18. FCode value 2.00.06.
 19. QCP2202F–E–SP/QLA234x–E–SP requires fcode v2.00.06. Fcode should be loaded on all HBA's at the time of installation.
 20. The LP8000–EMC HBA has a permanent GBIC, and does not have copper cable support.
 21. Driver Version 5.02b.
 22. **EMC required Sun patches for Solaris 9:**
 112233–08 Sun OS 5.9: kernel patch
 112834–03 Sun OS 5.9: patch SCSI
 113277–17 Sun OS 5.9: sd and ssd patch
 23. Firmware Version 1.01a2.
 24. The LP9002–E now ships with LP9002L–E low profile adapter. The older full form factor LP9002–E will not fit into the Sun Fire 12K or 15K.
 25. EMC required Sun patches for PCI at Solaris 7: 106541–27 SunOS 5.7: kernel update patch
 26. 64-bit HBAs will not fit into the 32-bit slot due to a physical obstruction.
 27. Driver Version 4.14.
 28. FCode value 2.00.06. QCP2202F–E–SP/QLA234x–E–SP requires fcode v2.00.06. Fcode should be loaded on all HBA's at the time of installation.
 29. If ATF is used, requires at least v3.3.0 ATF.
 30. Support for FC–AL or FC–SW.
 31. Mixing JNI and Emulex SBUS HBAs on the same host connected to the same storage system is not supported. If there is a business reason to do so, submit an RPQ.
 32. EMC required Sun patches for SBUS at Solaris 7: 106541–27 SunOS 5.7: kernel update patch
 33. EMC required Sun patches for Solaris 2.6:
 105181–35 SunOS 5.6: kernel update patch
 105356–23 SunOS 5.6: /kernel/drv/ssd and /kernel/drv/sd patch.
 105580–19 SunOS 5.6: /kernel/drv/glm patch (for X6541 HBA only).
 34. The Emulex LP9002L–F2 HBA requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can be either 3.3 VDC or 5.0 VDC signaling interface.
 35. Dynamic Reconfiguration is supported (Enterprise 10000 SBUS only); requires ATF v3.1.2 or higher.
 36. Supports DR on Sun 12K and 15K.
 37. **Use of the LP9002DC or QLA2342 requires FCO A0218–1 from Sun for HBA's to operate in 66mhz mode. Without this FCO the HBA's will only come up in 33mhz mode which could have an impact on performance.**
 38. Firmware Version 1.80a2.
 39. FCode value 1.40a0.
 40. Core software minimum requirement with CX600
 Array software – Access Logix 02.05.1.60.5.009
 Array software – Non-Access Logix 02.05.0.60.5.009
 CX400
 Array software – Access Logix 02.05.1.40.5.008
 Array software – Non-Access Logix 02.05.0.40.5.008
- Solaris 9:
 Requires PowerPath 4.0.3
 Support for Veritas Volume Manager VxVM 3.2 (Patch 04 required) and Solaris Volume Manager.
- Solaris 8:
 Requires PowerPath 4.0.3.
 Support for Veritas Volume Manager VxVM 3.2 with Patch 04 and SDS 4.2.1 with patch 108693–16 or later.
41. **Must add "ssd:ssd_max_throttle=20" in /etc/system for Clariion or Symmetrix attach. Must add "forcload drv/ssd" in the /etc/system when these HBA's are installed for Clariion or Symmetrix attach with PowerPath. Do not include the quotes on either entry. MpxIO is not currently supported with EMC storage**
 42. Driver Version SAN 4.2.
 43. Firmware Version 1.14.01.
 44. **Requires RPQ**

- See Technical Bulletin T010820 for supported patch levels.
- For HP–UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange –r N /dev/vg01/lvol1 or lvcreate –r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror–UX, then this flag should not be set.
- HP–UX 11.0: MC/SG 11.13 and 11.14 LVM only.
HP–UX 11i: MC/SG 11.13 and 11.14 can be used with LVM, VxVM 3.1 and VxVM 3.2. No DMP node failover supported at this time.
- Refer to MC/Service Guard Release Notes at www.docs.hp.com for patch requirements.
- Can mix HP–UX 11.00 and HP–UX 11i in same cluster, all nodes must be MC/SG 11.09, 11.13 or later.
- FC–AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
- 2–node clusters require special configurations. See Support Note S010106A on Customer Service web site.
- Support for CX600, CX400, FC4500, FC4700, and FC5300. (FC5300 requires copper to Fibre transceiver.)
- HP A5158A is enabled in March 2000 HWCR Bundle XSWHW1100.48. Additional patches may be required for support.
- Supported with CX600, CX400, FC4500 and FC4700.
- As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add–on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)
L2000 (product number A5191A)
N4000 Revision A (product number A3639A)
N4000 Revision B (product number A3639B)

- PA–8700 processors: Initial support with HP–UX 11.0 Sept 2001, HP–UX 11i Sept 2001.
- 13.

- Switched fabric (FC-SW) first supported on FC4500, requires Core Software 6.32.05 or higher, Navisphere Agent 4.3 or higher, and Access Logix enabled (data access control enabled).
- 14. Patch PHSS_21996 or patches replaced or superseded by are required with HP-UX 11i.
- 15. rp5470, rp7400: (PA-8700 processors) : Initial support with HP-UX 11.0 Sept 2001, 11i Sept 2001 .
- 16. Supported with cx600, cx400,fc4500, fc4700
- 17. GAB disks (membership and service group heartbeat disks) are not supported.
- 18. Review the single attach table for supported PowerPath versions and volume manager restrictions.
- 19. Symm 6 is qualified with: HP-UX 11i Support Plus Sept '02 bundle = GOLDAPPS11i June '02, GOLDBASE11i June '02 & HWEnable11i Sept '02.
- 20. For driver versions refer to Base Connectivity Section
- 21. Minimum OS version is HP-UX 11.0 990P.
- 22. rp5405, rp5430, rp5470, rp7400: (PA-8700 processors): Initial support with HP-UX 11.0 Sept 2001, 11i Sept 2001. Symmetrix microcode supported: 5266.40.28 or higher. 5566.41.28 or higher. 5267.27.19 or higher. 5567.34.19 or higher.
- 23. Virtual Partitions (VPAR) is supported on the L-class/rp5470 server.
VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 41.02 or later.
- 24. Virtual Partitions (VPAR) is supported on the N-class/rp7400 server with 4.x and 5.x Symmetrix models. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later. Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later, server PDC firmware 42.06 or later.
- 25. rp8400 requires minimum PDC firmware 13.10 or higher.
- 26. VPAR supported only with HP-UX 11i v1.0 (HP-UX 11.11) Dec 2001 release or later.
Requirements: Minimum VPAR product release of A.02.01.00 or later, Partition Manager B.11.11.01.05 or later, Online Diagnostic revision B.11.11.07.23 or later.
- 27. **MC/ServiceGuard 11.15 is supported on HP-UX 11i v1.0 and HP-UX 11i v2.0 only**
- 28. **Minimum microcode revision level 5670.23.25. 5568 and 5669 are on a RPQ basis at this time.**

- AIX 5.1–32/64 bit kernel supported. Requires CLArrayS3.5.1 fileset support.
- Minimum PowerPath 3.0.2 is supported.
- Includes support for the FC4700, FC4700–2, CX600, CX400.
- For installation with Powerpath Versions 3.0.3 and 3.0.4 see Primus ID EMC69100 which contains additional requirements for support.
- This configuration for HACMP when used in conjunction with Fibre Channel boot requires RPQ approval.
- FC–SW and FC–AL are supported on the same server.
- PowerPath is supported with LVM and JFS
- GAB disks (membership and service group heartbeat disks) are not supported.
- Supported in SMP and LPAR modes.
- For IBM AIX 4.3.3: requires Oracle RAC9i (9.0.1), HACMP/ES 4.4.x. PowerPath 3.0.2 or greater is supported. A SAN implementation with ISLs will observe significant delay in failover times if link failures non–contiguous to host HBA occur.
- For IBM AIX 5.1: requires Oracle RAC9i (9.2), HACMP/ES 4.4.x. PowerPath 3.0.2 or greater is supported. A SAN implementation with ISLs will observe significant delay in failover times if link failures non–contiguous to host HBA occur.
- Minimum CLArrayS3.4.3.0.x fileset is supported. Supports FC4700, FC4700–2, with minimum Flare code 8.46.xx.
- Minimum Powerpath version 3.0.2 is supported.
- AIX 5.1 supported with 32–bit kernel. Requires minimum EMC ODM fileset support 5.0.0.0.
- Requires minimum AIX 4.3.3 with APAR IY22024, Requires PSSP 3.4 with APAR IY32625
- Refer to Primus case #1.0.128870403.2749464 for configuration instructions.
- Requires minimum PSSP 3.4 APAR IY33448.
- Includes support for FC4700, FC4700–2, CX600, CX400.
- Minimum Powerpath version 3.0.2 is supported
- Minimum CLArrayS3.4.3.0.x fileset is supported. Supports FC4700, FC4700–2 with minimum Flare code 8.46.xx.
- Requires minimum PSSP 3.2 APAR IY18172, IY31012
- The following link provides detailed data for all 9076–SP2 models and feature codes:
http://www1.ibm.link.ibm.com/cgi-bin/master?request=salesmanual&parms=SMS&xh=NTZH*daEMSRi4n1USenGnN9332&xhi=usa.main%7Csalesmanual%5E&type=D&search=9076&title=T&product=9076
- Requires minimum PSSP 3.2 APAR IY18172
- AIX 5.1 supported with 32/64 bit kernel.
- Requires adapter firmware 3.82A1, CLArrayS3.5.1 fileset support. Supports FC4700 with minimum Flare code 8.46.xx.
- Requires AIX 5.1 with minimum maintenance level 03 APAR 1Y32749.
- For minimum Powerpath version 3.0.3, minimum CLArray S3.5.1.0.6 version is required.
- Requires minimum AIX5.1 with maintenance level 03 APAR IY32749.
- Minimum Powerpath version 3.0.3 is supported.
- Requires minimum PSSP APAR IY38509
- PSSP 3.5 supports a 32 or 64 bit kernel.
- IBM Native Fibre Channel drivers with feature code 6227 and with feature code 6228 are supported on the same server. Feature 6228 and 6239 are supported on the same server. Mixed FC–AL and FC–SW are supported on the same server. 6227 filesets: devices.pci.df1000f7.diag, devices.pci.df1000f7.rte, 6228 filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1000f9.diag, devices.pci.df1000f9.rte; 6239 filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1000f9.diag, devices.pci.df1000f9.rte
- AIX 5.1 supported only with 32–bit kernel.
- Requires adapter firmware 3.22A1, CLArrayS3.5.1 fileset support. Supports FC4700 with minimum flare code 8.46.xx.
- AIX 5.2 requires Operating System APAR# IY36782, IY37744 and IY37746 for support with HACMP and HACMP/ES version 4.5 and PSSP 3.5.

35. HACMP 4.5 when installing under AIX 5.2 requires HACMP 4.5 APAR# IY36938.
36. When installing under AIX 5.2 HACMP/ES 4.5 APAR# IY36938, HACMP/ES 4.5 APAR# IY36933, HACMP/ES 4.5 APAR# IY36626 and RSCT 2.3 APAR# IY36626 are required.
37. AIX 5.1 supported with 32/64-bit kernel. Requires minimum EMC ODM fileset support 5.0.0.0.
38. AIX 5.1 32/64 bit Kernel supported. Minimum PowerPath Version 2.1.2 supported. Requires minimum EMC ODM fileset support 5.0.0.0.
39. Requires minimum IBM APAR IY43999
40. Requires a minimum of three nodes in the cluster.
41. See http://www.rs6000.ibm.com/resource/hardware_docs/sa38-0538/380538.pdf for appropriate HBA placement guidelines
42. Requires minimum ODM fileset support (5.0.0.0 EMC Symmetrix Fibre Channel support software).
43. IBM 6227 and IBM 6228 adapters are supported on the same server. Mixed FC-AL and FC-SW are supported on the same server.
6227 Filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1000f7.rte ;
6228 Filesets: devices.pci.df1000f7.com, devices.pci.df1000f7.diag, devices.pci.df1000f9.diag, devices.pci.df1000f9.rte
44. For all PCI-based hosts only: See http://www-1.ibm.com/servers/eserver/pseries/library/hardware_docs/sa38/380538.pdf for appropriate HBA placement guidelines.
45. Requires minimum HBA firmware 3.82A1, CLArrayS3.5.1 fileset support. Supports FC4700 with minimum Flare code 8.46.xx .
46. **AIX 5.2 32/64 bit kernel supported. Requires Minimum EMC ODM fileset support 5.0.0.0.**
47. **Requires AIX APAR IY48995**
48. **Minimum PowerPath 3.0.3 supported.**
49. **Requires minimum of CLArrayS3.5.2.0.7**

Microsoft Windows 2000

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non-disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
 - 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
 - 3) External storage director failures including failed lasers on Fibre Channel directors.
 - 4) External storage power failure.
 - 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
 - 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements.
- Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

1	Express 5800 180Rb7	Microsoft Windows 2000: Advanced Server SP2^{2, 3} , Server SP4 ²	Microsoft MSCS ⁴	HA: 4	Emulex LP8000-EMC ⁵	See ¹

1. EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
2. EMC recommends that HBAs of different vendors not be used in the same host server.
3. **Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.**
4. Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.
5. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- PowerPath not supported. ATF is supported.
- Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
- Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.
- Supported by direct attach only
- Oracle Cluster File System not supported for 9i RAC 9.2.0.1.0.
VxVM not supported.
PowerPath 3.0 supported.
- FC-AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
- PowerPath supported. ATF/CDE not supported.
- If no firmware/BIOS/driver is specified, refer to Base Connectivity information for minimum revision details.
- GAB disks (membership and service group heartbeat disks) are not supported.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- If using ATF/CDE, requires 2.1.6 or greater..
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Oracle Cluster File System 1.x supported for 9i RAC 9.2.0.3. PowerPath 3.02

1. EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
 2. EMC recommends that HBAs of different vendors not be used in the same host server.
 3. Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
 4. PowerPath not supported. ATF is supported.

5. Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.
6. Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
7. CX600 only.
8. Oracle Cluster File System not supported for 9i RAC 9.2.0.1.0.
VxVM not supported.
PowerPath 3.0 supported.
9. FC-AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
10. If no firmware/BIOS/driver is specified, refer to Base Connectivity information for minimum revision details.
11. Supported by direct attach only
12. Host must be offline for CLARiiON-licensed (Flare) upgrade and Storage Processor replacement.
13. LP8000 no longer has removable GBICs for copper cable support.
14. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
15. Microsoft Cluster Server (MSCS) is the native cluster service available with Windows NT Server 4.0 Enterprise Edition.
16. GAB disks (membership and service group heartbeat disks) are not supported.
17. PowerPath supported. ATF/CDE not supported.
18. Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).
19. If using ATF/CDE, requires 2.1.6 or greater..
20. HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
21. HP NetServer LC2000 is only supported with two processors.Uni-Processor configurations are not supported
22. Includes both Pentium PRO and XEON models
23. Oracle Cluster File System not supported for 9i RAC 9.2.0.1.0
. VxVm not supported. PowerPath 3.0 supported.
24. Supports BIOS 1.34. Supports SNIA HBA API. Driver and BIOS available at <http://www.qlogic.com>.
25. **Supports BIOS 1.34. Available at <http://www.qlogic.com>. This driver requires Microsoft STORPort hotfix Q823728. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];823728](http://support.microsoft.com/default.aspx?scid=kb;[LN];823728) [NOTE: Powerpath not currently supported with STORPort driver.]**
26. Oracle Cluster File System 1.x supported for 9i RAC 9.2.0.3. PowerPath 3.02

1. GAB disks (membership and service group heartbeat disks) are not supported.
2. FC-AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
3. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
4. If no firmware/BIOS/driver is specified, refer to Base Connectivity information for minimum revision details.
5. EMC recommends that HBAs of different vendors not be used in the same host server.
6. EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
7. Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.
8. Supported by direct attach only
9. IBM xSeries Servers only:
10. This HBA is equivalent to the qLogic QLA2310.
11. **Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.**
12. PowerPath supported. ATF/CDE not supported.
13. If using ATF/CDE, requires 2.1.6 or greater..
14. Oracle Cluster File System not supported for 9i RAC 9.2.0.1.0. VxVM not supported. PowerPath 3.0 supported. This HBA is equivalent to the qLogic QLA2340.
15. For CX200 direct-connect only, boot from array for clusters not supported.
16. This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
17. If using ATF/CDE, requires 2.1.6 or greater.
18. Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
19. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"
20. This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
21. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
22. Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).
23. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- PowerPath not supported. ATF is supported.
- Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.**
- Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- PowerPath supported. ATF/CDE not supported.
- If no firmware/BIOS/driver is specified, refer to Base Connectivity information for minimum revision details.
- FC-AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
- Supported by direct attach only
- If using ATF/CDE, requires 2.1.6 or greater..
- GAB disks (membership and service group heartbeat disks) are not supported.

Microsoft Windows 2003

EMC recommends shutting down the host server during maintenance procedures that could cause the boot disk to become unavailable to the host. If the paging file is unavailable to the operating system for a minimum of 10 seconds, a crash can occur. (NOTE: EMC does not support online microcode upgrades for Windows systems booting from Symmetrix. EMC also does not support CLARiiON non-disruptive upgrades for Windows systems booting from CLARiiON arrays. Windows servers should be temporarily shut down during online microcode upgrades and NDUs as the procedures prevent access to all disks for short periods of time.) Events that could cause a system to crash when booting from external storage are:

- 1) Lost connection to external storage (pulled or damaged cable connection).
- 2) External storage service/upgrade procedures such as online microcode upgrades and/or configuration changes.
- 3) External storage director failures including failed lasers on Fibre Channel directors.
- 4) External storage power failure.
- 5) Storage area network failures such as Fibre Channel switches, switch components, and switch power failures.
- 6) Storage area network service/upgrade procedures such as firmware upgrades or hardware replacements. Windows NT/Windows 2000/2003 Servers (Fibre Channel/SCSI) Boot CAUTION: Microsoft Windows NT uses virtual memory paging files that reside on the boot disk by default. Please refer to the information contained in Microsoft Knowledge Base article Q305547. The article explains how Microsoft supports booting Windows systems through a SAN (storage area network.) Although this article specifically mentions Windows 2000, the information also pertains to Windows NT 4.0 systems booting through a SAN.

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Powerpath 3.0.5 supported with MSCS clusters on Windows 2003.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- No EMC Layered Applications supported on IA64 server platforms**
- Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.

- 8. MSCS multi cluster configurations supported. If multi-clusters using Fibre Channel HBAs are configured to use a single FA port, use ESN Manager for LUN masking with the following minimum microcode: 5267.39, 5567.46, 5568.39.
- 9. Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.

- EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- Microsoft Cluster Server (MSCS) is the native cluster service available with Windows NT Server 4.0 Enterprise Edition.
- FC-AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
- If no firmware/BIOS/driver is specified, refer to Base Connectivity information for minimum revision details.
- HPQ Proliant servers that are rack-mountable (designated with an "R") are supported.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- Includes both Pentium PRO and XEON models
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- LP8000 no longer has removable GBICs for copper cable support.
- If using ATF/CDE, requires 2.0.9 or greater.

1. NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
2. Maximum number of NWFS volumes that can be mounted is 64.
3. Novell Storage Services supported.
4. Powerpath & ATF supported.
5. FC-AL for CX200 requires the following:
 - 1) QLA2340 driver version 6.50v available at http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
 - 2) If the server is an HPQ Proliant DLxxx or Proliant MLxxx series, then ONLY (G2) and (G3) servers are supported.
6. PowerEdge 2550 supports a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
7. Requires NetWare patches: NWPAPT2A and NSS5J.
8. Qlogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.

- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- Maximum number of NWFS volumes that can be mounted is 64.
- Novell Storage Services supported.
- Powerpath & ATF supported.
- If using ATF/CDE, requires 2.1.6 or greater.
- This HBA is equivalent to the qLogic QLA2340.
- FC-AL for CX200 requires the following:
 - QLA2340 driver version 6.50v available at http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
 - If the server is an HPQ Proliant DLxxx or Proliant MLxxx series, then ONLY (G2) and (G3) servers are supported.
- Requires NetWare patches: NWPAPT2A and NSS5J.
- This server only supports 5 Volt HBAs: qLogic 22XX family (if applicable), qLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
- QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.

- Watchdog Timer should be disabled in ocmargs.ora
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- OCFS (Oracle Cluster File System) is not supported.
- Supported with QLogic driver v6.05.00.
- Configuration information available on EMC PowerLink and Avatar: See the Case Study "Oracle 9i RAC on Linux Red Hat 7.1 and Red Hat 2.1 Advanced Server with CLARiiON Storage Arrays" in the EMC Networked Storage Topology Guide.
- Host must be offline for CLARiiON–licensed (Flare) upgrade and Storage Processor replacement.
- QLogic driver is available with Dell/Oracle CC kit.
- An RPM from Dell may be used to install the QLogic v6.X driver. RPM may be obtained from the QLogic website.
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath.
- Booting from EMC storage arrays is NOT supported with PowerPath.
- requires patch p2632931_9202_LINUX.zip (9.2.0.2 patch set).
- Requires patch p2646914_9202_LINUX.zip (Private Network Fix).
- Oracle Cluster File System v1.x supported with Linux v2.4.9–E9, E10, E12, E16, E24, E25.
- OCFS (Oracle Cluster File System) is supported. Requires patch mount–2.11g–6i386.rpm (ocfs mount support).
- Driver v6.04.00 or above must be used with QLogic HBAs for direct attach configurations.
- FC–AL and FC–SW topologies can co–exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- PowerPath is not supported.
- GAB disks (membership and service group heartbeat disks) are not supported.
- Review single attach VxVM notes for PowerPath and DMP restrictions.
- When VxVM is used, EMC recommends VxVM 3.2 update 2, VxFS 3.4 update 1 and above.
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- Oracle Cluster File System 1.x supported for 9i RAC 9.2.0.3. PowerPath 3.03
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- Single HBA zoning is required regardless of the switch being utilized.
- FC–AL and FC–SW can run concurrently on separate HBAs on the same Host.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.**
- Emulex driver and BIOS available from <http://www.emulex.com>.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**

- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Oracle Cluster File System v1.x supported with Linux v2.4.9–E9, E10, E12, E16, E24, E25.
- Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
- FC–AL and FC–SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Host must be offline for CLARiiON–licensed (Flare) upgrade and Storage Processor replacement.
- Configuration information available on EMC PowerLink and Avatar: See the Case Study "Oracle 9i RAC on Linux Red Hat 7.1 and Red Hat 2.1 Advanced Server with CLARiiON Storage Arrays" in the EMC Networked Storage Topology Guide.
- Driver v6.04.00 or above must be used with QLogic HBAs for direct attach configurations.
- Watchdog Timer should be disabled in ocmargs.ora
- OCFS (Oracle Cluster File System) is not supported.
- Supported with QLogic driver v6.05.00.
- Includes both Pentium PRO and XEON models
- OCFS (Oracle Cluster File System) is supported. Requires patch mount–2.11g–6i386.rpm (ocfs mount support).
- GAB disks (membership and service group heartbeat disks) are not supported.
- Review single attach VxVM notes for PowerPath and DMP restrictions.
- When VxVM is used, EMC recommends VxVM 3.2 update 2, VxFS 3.4 update 1 and above.
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- Oracle Cluster File System 1.x supported for 9i RAC 9.2.0.3. PowerPath 3.03

19. QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.
20. FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
21. Single HBA zoning is required regardless of the switch being utilized.
22. If no firmware/BIOS/driver is specified, refer to Base Connectivity information for minimum revision details.
23. FC-AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
24. requires patch p2632931_9202_LINUX.zip (9.2.0.2 patch set).
25. Requires patch p2646914_9202_LINUX.zip (Private Network Fix).
26. PowerPath is not supported.
27. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RQP.
28. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
29. Emulex driver and BIOS available from <http://www.emulex.com>.
30. QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.

12. PowerPath supported. ATF/CDE not supported.
13. Host must be offline for CLARiON-licensed (Flare) upgrade and Storage Processor replacement.
14. Compaq servers that are rack-mountable (designated by Compaq with an "R") are supported.
15. Includes both Pentium PRO and XEON models

IBM

IBM – SuSE Linux						
No.	Host System	Operating System	Cluster Software	Max # Nodes	Host Bus Adapter	Comments
1	eServer BladeCenter HS20 (Model 8678) ^{9, 10}	SuSE Linux SLES 8 SP2a (v2.4.19–SuSE.304) ^{2, 3}	Microsoft MSCS ^{4, 5, 6}	HA: 4	IBM HS20 FC Exp Card(48P7061) with: 2 Port Switch Module 48P7062 ^{11, 12} , Optical Pass-thru Module 02R9080 ^{7, 8}	See ¹

1. EMC supports booting from cluster servers. Please refer to base connectivity table to determine boot support for desired server model.
2. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
3. Requires rev1_sles8sp2a.patch for CLARiON-attached hosts available from <ftp://ftp.emc.com/pub/elab/linux>.
4. Best Practice configurations recommendations for MSCS Clusters are: Single HBA Zoning for each server or for each node in any given cluster, separate FA storage ports for each separate cluster to properly isolate the clusters from each other, use ESN Manager with Single HBA Zoning to provide additional LUN access control.
5. Microsoft Cluster Server (MSCS) is the native cluster service available with Windows 2000 Advanced Server.
6. Powerpath 3.0.5 supported with MSCS clusters on Windows 2003.
7. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.

8. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**
9. Refer to Microsoft HCL for updated Windows 2000 SCSI clusters (<http://www.microsoft.com/hwtest/hcl>).
10. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
11. **Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)**
12. **Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**

1. No OPS support for Solaris 7.
2. GAB disks (membership and service group heartbeat disks) are not supported.
3. FC-AL and FC-SW topologies can co-exist on the same server but not on the same HBA, provided that the different topologies are attached to different HBAs
4. FC-AL and FC-SW can run concurrently on separate HBAs on the same Host.
5. FC-SW applies only to CX600, CX400, FC4500 and FC4700
6. FC-AL for FC4700 requires Base Software or Access Logix 8.42.xx or higher.
7. 64-bit HBAs will not fit into the 32-bit slot due to a physical obstruction.
8. Supported with Powerpath 3.x configuration only. Native names only, no "power devices". Review the ESN topology guide section on Oracle DBED/AC case studies for configuration restrictions.
9. Supported with VCS 3.5 Maintenance Patch 1
10. Requires Solaris 8 update 7 or later.
11. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
12. Support for FC4500, FC4700 and FC5300, FC5500, FC5700.
13. Clusters with more than 4 nodes require VCS patch P2 and VxVM v3.1 patch P4
14. Review VERITAS Database Edition/Advanced Cluster 3.5 for Oracle9i RAC Release Notes for supported Oracle Database releases.
15. **Veritas MP2 is required for clusters with more than 2 servers**
16. Review the ESN Topology Guide section on Oracle DBED/AC Case Studies for configuration restrictions.
17. If all FC connectivity to the array is lost (without a server shutdown), then after connectivity is restored, the user must execute a vxctl enable command, before the VCS Oracle 9iRAC service group is brought back online.
18. If running direct attach (FC-AL), host MUST be connected to both SPs and PowerPath is required. Refer to EMC Topology Guide for more details.
19. Requires Symmetrix 8000 Series, PowerPath 3.0.4 or later, VxVM 3.5 or later or Solstice Disk Suite (SDS) 4.2.1.
Supported with Microcode 5568.52.18
5567 code revisions supported are 5567.46.24 or 5567.53.30. 5567.53.30 requires the PGR Phase 4 E-pack.
Symmetrix "PER" volume flag for Persistent Reservation support for devices accessible through more than two paths.
20. Supported with VCS only.
21. Solaris 8:
Requires PowerPath 3.0.4.
Support for Veritas Volume Manager VxVM 3.2 with Patch 04 and SDS 4.2.1 with patch 108693-16 or later.
22. Core software minimum requirement with CX600
Array software – Access Logix 02.05.1.60.5.009
Array software – Non-Access Logix 02.05.0.60.5.009
CX400
Array software – Access Logix 02.05.1.40.5.008
Array software – Non-Access Logix 02.05.0.40.5.008
23. OPS, RAC, or greater than 2-node HA are supported with FC-SW only.
24. See the EMC price book for HBA vendor ordering information. This HBA is not sold by EMC.
25. Supported on CX600, CX400, FC4500, FC4700 Only
26. Review single attach VxVM notes for PowerPath and DMP coexistence rules and restrictions.
27. Dynamic Reconfiguration is supported (Enterprise 10000 SBus only); requires ATF v3.1.2 or higher.
28. Cluster with more than 4 nodes requires VCS patch P2 and VxVM v3.1 patch P4
29. Please review Veritas support pages for latest patch information.
30. **Requires patches 112563-10 or later, and 114176-02 or later.**
31. Solaris 9:
Requires PowerPath 3.0.4.
Support for Veritas Volume Manager VxVM 3.2 (Patch 04 required) and Solaris Volume Manager.
32. **EMC required Sun patches for Solaris 9:**
112233-08 Sun OS 5.9: kernel patch
112834-03 Sun OS 5.9: patch SCSI
113277-17 Sun OS 5.9: sd and ssd patch
33. Requires PowerPath 3.0.4.
Supported only on VxVM 3.2 P04, VxVM 3.5 MP1 or later, and SDS 4.2.1 with patch 108693-16 or later.
34. Core software minimum requirement with CX600
Array software – Access Logix 02.05.1.60.5.009
Array software – Non-Access Logix 02.05.0.60.5.009
CX400
Array software – Access Logix 02.05.1.40.5.008
Array software – Non-Access Logix 02.05.0.40.5.008
- Solaris 9:
Requires PowerPath 4.0.3
Support for Veritas Volume Manager VxVM 3.2 (Patch 04 required) and Solaris Volume Manager.
- Solaris 8:
Requires PowerPath 4.0.3.
Support for Veritas Volume Manager VxVM 3.2 with Patch 04 and SDS 4.2.1 with patch 108693-16 or later.
35. Requires PowerPath 3.0.4.
Supported only on VxVM 3.5 MP1 or later and SVM.
36. **Use of the LP9002DC or QLA2342 requires FCO A0218-1 from Sun for HBA's to operate in 66mhz mode. Without this FCO the HBA's will only come up in 33mhz mode which could have an impact on performance.**

Fibre Connectivity: Hub

Please refer to the Cables and Connectors section for more information. Please refer to the Base Connectivity Interoperability Application for details concerning kernel versions, minimum driver and BIOS / firmware revisions. Fanout represents the maximum initiators (host adapters) per array port. Fanin represents the number of array ports visible to a single initiator (host adapter). In arbitrated loop environments, these numbers represent the maximum initiators per loop. In switch environments, these numbers are achieved through Zoning. For further details on Fanin/Fanout, see the Connectrix Enterprise Storage Network Planning Guide, EMC Networked Storage Topology Guide, and CLARiiON Open Systems Configuration Guide. For Switch Firmware levels and other fabric parameters, see Switched Fabric Topology parameters.

HPQ HP-UX

HPQ HP-UX								
No.	Operating System	Host Bus Adapter	Hub	Fanin	FC-Fanout	FC-Luns/Storage Port	Luns/HBA	Luns/Loop
1	HPQ HP-UX 11.0: 990P ¹ , ACE ¹ ; HPQ HP-UX: 11.0 ¹ , 11i v1.0 (HP-UX 11.11) ¹	HPQ: A3404A, A3591B, A3740A, A5158A, A6684A, A6685A, A6795A ⁵	Gadzoox FCL1063TW; HPQ: A3724A/AZ ⁴ , A4839A/AZ ⁴	1	32	1024 ² , 512 ³	256	128

- For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
- CX600
- CX400
- HP optical Hubs (HP models A3724A and A4839A) have been qualified, but are not sold by EMC.
- As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)
L2000 (product number A5191A)
N4000 Revision A (product number A3639A)

- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Supported with QLogic driver v6.05.00.
- Single HBA zoning is required regardless of the switch being utilized.
- CX400**
- CX600**
- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- Requires QLogic driver v6.04.01 (included in 2.4.9-e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- Emulex driver and BIOS available from <http://www.emulex.com>.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**

1. EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPO.
2. Requires rev1_sles8sp2a.patch for CLARiiON-attached hosts available from ftp://ftp.emc.com/pub/elab/linux.
3. Single HBA zoning is required regardless of the switch being utilized.
4. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
5. QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.
6. Requires QLogic driver v6.04.01 (included in 2.4.9-e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
7. CX600
8. CX400
9. Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
10. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
11. Emulex driver and BIOS available from http://www.emulex.com.
12. Use the boot option "acpi=oldboot" in SuSE SLES8 SMP configurations with the LP9802DC-E and LP9002DC-E adapters
13. Host must be offline for CLARiiON-licensed (Flare) upgrade and Storage Processor replacement.
14. The LP9002-E now ships with the LP9002L-E low profile adapter.
15. QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.
16. QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.

2. CX400
3. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.

Fibre Connectivity: Switch

Fanout represents the maximum initiators (host adapters) per array port. Fanin represents the number of array ports visible to a single initiator (host adapter). In arbitrated loop environments, these numbers represent the maximum initiators per loop. In switch environments, these numbers are achieved through Zoning. For further details on Fanin/Fanout, see the Connectrix Enterprise Storage Network Planning Guide, EMC Networked Storage Topology Guide, and CLARiiON Open Systems Configuration Guide. For Switch Firmware levels and other fabric parameters, see Switched Fabric Topology parameters.

- For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
- Extended Fabric software license is bundled into DS-xB models. Optional Extended Fabric software license for all DS-xB switches ordered after July 4, 2001 require chargeable model DSBXFAB-0D.
- Requires at least v5.11.09 of FC5700 Core Software (a.k.a. Flare), v5.32.01 of FC4500 Core Software or v5.24.00 of FC5300 Core Software.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- Switch support can be QuickLoop dedicated to any HP hosts in table titled "Clarion CX600/CX400 Base Connectivity" or heterogeneous fabric with HP FC-SW (fabric) hosts in that table. For FC4700, one port on each SP may be used for QuickLoop when the other port is used for FC-SW. QuickLoop support requires chargeable model DSBQLP-0D.
- CX400
- CX600
- Switch support can be QuickLoop dedicated to any HP hosts in Table 84 on page 226 or heterogeneous fabric with HP FC-SW (fabric) hosts in that table. For FC4700, one port on each SP may be used for QuickLoop when the other port is used for FC-SW. QuickLoop support requires chargeable model DSBQLP-0D.
- FC4700-2 supported at 1 Gb and 2 Gb.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- QuickLoop is not supported with Brocade 3900/12000 or ED-12000B.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)

L2000 (product number A5191A)

N4000 Revision A (product number A3639A)

N4000 Revision B (product number A3639B)

- QuickLoop is not supported with Brocade 3200/3800/12000 or DS-16B2, ED-12000B.

- NDU Release 11

- Supported Server model: rp5470 PDC 42.06

- During initial switch configuration with fw 1.2 or earlier, in an HP-UX environment, the Persistent FC IDs must be enabled on the Vsan that contains any HP HBAs. The N_Port Area IDs must be manually configured to be unique, static, and persistent on the Vsan that contains any HP HBAs, the target storage array's N_Port ID must also be set to persistent and static. See MDS 9000 Family Configuration Guide for details.

- Supported server model: rp7410 PDC 16.009

- Minimum PDC firmware to support external boot with the RP7410.

- Supported on CX600, CX400 and FC4700-2 only.

- The 200-561-9XX, and 200-563-9XX FA director families support a total of 256 LUNs per FA port. (Hewlett Packard Alpha Tru64 supports 255 LUNs.)

- Maximum of 320 visible LUNs per hba supported with HP-UX 11.0 HA configurations

23. Maximum of 512 visible LUNs per hba supported with HP-UX 11i v1.0 (HP-UX 11.11) HA and non-HA configurations
24. Maximum of 512 visible LUNs per hba supported with HP-UX 11.0 non-HA configurations
25. Maximum of 320 visible LUNs per hba supported with HP-UX 10.20 HA configurations.
26. Maximum of 320 visible LUNs per hba supported with HP-UX 11.0 HA configurations.
27. Maximum of 512 visible LUNs supported with HP-UX 11.0 non-HA configurations
28. Maximum of 512 visible LUNs per hba supported with HP-UX 10.20 non-HA configurations
29. See HBA for min Driver version
30. Required Patch PHKL_28569, PHKL_26938 and 2port 2Gig driver version 11.11.01.
31. **Host must be configured as a 64Bit operating system.**
32. **During initial switch configuration with firmware 1.2 or earlier, in an HP-UX environment, the Persistent FC IDs must be enabled on the Vsan that contains any HP HBAs. The N_Port Area IDs must be manually configured to be unique, static, and persistent on the Vsan that contains any HP HBAs. The target storage array's N_Port ID must also be set to persistent and static. See MDS9000 Family Configuration Guide for details.**
33. **HP-UX 11.0 HA**

- EMC recommends that HBAs of different vendors not be used in the same host server.
 - Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
 - CX400
 - CX600
 - Extended Fabric software license is bundled into DS-xB models. Optional Extended Fabric software license for all DS-xB switches ordered after July 4, 2001 require chargeable model DSBXFAB-0D.
 - The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
 - EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
 - EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
 - EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
 - (QLA2200) For IBM xSeries and Netfinity servers only.
 - Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.
 - When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"
- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.
 - Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)

- Maximum number of NWFS volumes that can be mounted is 64.
- Extended Fabric software license is bundled into DS-xB models. Optional Extended Fabric software license for all DS-xB switches ordered after July 4, 2001 require chargeable model DSBXFAB-0D.
- CX400**
- CX600**
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- ED-64 and ED-1032 not supported for FC5300.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNS is supported.**
- For IBM Netfinity and xSeries Intel servers only.
- This HBA is equivalent to the qLogic QLA2340.
- This HBA is equivalent to the qLogic QLA2310.
- (QLA2200) For IBM xSeries and Netfinity servers only.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Requires QLogic driver v6.04.02 and BIOS 1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65
- Requires QLogic driver v6.04.02 and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- Requires QLogic driver v6.04.01 (included in 2.4.9-e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Firmware v2.5.1b or later required**
- Firmware 3.0.2a or later required.**
- Qlogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
- Requires NWPANLM V.3.07A update from Novell website.**
- Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)**

- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with Qlogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- CX600**
- CX400**
- Firmware 3.0.2a or later required.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- Extended Fabric software license is bundled into DS-xB models. Optional Extended Fabric software license for all DS-xB switches ordered after July 4, 2001 require chargeable model DSBXFAB-0D.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- Firmware v2.5.1b or later required
- Supported with QLogic driver v6.05.00.
- Single HBA zoning is required regardless of the switch being utilized.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- This kernel is supported with the Qlogic v6.04.01 driver included in the kernel.
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- Requires QLogic driver v6.04.01 (included in 2.4.9-e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)
- ED-64 and ED-1032 not supported for FC5300.

- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- Requires rev1_sles8sp2a.patch for CLARiiON-attached hosts available from <ftp://ftp.emc.com/pub/elab/linux>.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- CX600**
- CX400**
- Firmware 3.0.2a or later required.
- Extended Fabric software license is bundled into DS-xB models. Optional Extended Fabric software license for all DS-xB switches ordered after July 4, 2001 require chargeable model DSBXFAB-0D.
- Firmware v2.5.1b or later required
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Requires QLogic driver v6.04.01 (included in 2.4.9-e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.**
- Single HBA zoning is required regardless of the switch being utilized.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Host must be offline for CLARiiON-licensed (Flare) upgrade and Storage Processor replacement.
- Use the boot option "acpi=oldboot" in SuSE SLES8 SMP configurations with the LP9802DC-E and LP9002DC-E adapters
- The LP9002-E now ships with the LP9002L-E low profile adapter.
- QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)**

- CX600**
- CX400**
- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- ED-64 and ED-1032 not supported for FC5300.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- Extended Fabric software license is bundled into DS-xB models. Optional Extended Fabric software license for all DS-xB switches ordered after July 4, 2001 require chargeable model DSBXFAB-0D.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- No boot support at this time.

iSCSI to FC Routing

No.	Operating System	Network Interface Card	Driver	Network Configuration	Bridge	Firmware Revision	Comments
1	Microsoft Windows 2000: Advanced Server SP4 ⁵ , Server SP4 ⁵ ; Microsoft Windows 2003: Enterprise Edition (Advanced Server) ⁵ , Standard Edition (Server) ⁵	Generic NIC 10/100, Generic NIC GE	Microsoft 1.01 ¹ , 2, 3, 4	LAN Only ^{9, 10}	Nishan IPS 3300, Nishan IPS 4300	4.1	See ^{6, 7, 8}

1. Booting over iSCSI is not supported.
2. Clusters are not supported.
3. Microsoft Dynamic Disks are not supported.
4. The maximum number of iSCSI LUNs supported per host system is 128.
5. EMC recommends that HBAs of different vendors not be used in the same host server.
6. This configuration requires completion of a Pre-Sales Questionnaire (PSQ).
7. PowerPath 3.0.5 is supported with different subnets for each path.
8. A maximum of 12:1 fan-in is supported.
9. Layer 2 or single subnet TCP/IP LAN
10. Requires a dedicated network for iSCSI storage only. The network should be design to have no packet loss or packet duplication.

Application Software Fujitsu Technology Solutions Solaris

Fujitsu Technology Solutions Solaris			
No.	Operating System	Host Bus Adapter	Application Software
1	Fujitsu Technology Solutions Solaris: 2.6, 7, 8, 9	Emulex: LP8000-EMC ¹ , LP9002-E (LP9002L-E)	PowerPath: 3.0.3, 3.0.4, 4.0.3 ^{2, 3}

1. The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
2. ATF/CDE and PowerPath cannot co-exist in the same server.
3. Powerpath supported on FC4500, FC4700, CX600, and CX400. CLARiiON and Symmetrix can co-exist in the SAN with the same server.

HPQ HP-UX

HPQ HP-UX				
No.	Operating System	Host Bus Adapter	Application Software	Comments
1	HPQ HP-UX: 11.0 ² , 11i v1.0 (HP-UX 11.11) ²	HPQ: A3404A, A3591B, A3740A, A5158A, A6684A, A6685A, A6795A ⁵	AccessLogix 02.05; MirrorView 1.8 ⁶ ; Navisphere: Agent/CLI 6.5, Analyzer 6.5, Integrator 6.5 ⁷ , Manager, Event Monitor 6.5 ⁸ ; SAN Copy 1.1 ^{9, 10, 11, 12} , SnapView 2.2 ^{6, 13} , admsnap 2.2 ^{6, 13, 14}	
2	HPQ HP-UX: 11.0 ² , 11i v1.0 (HP-UX 11.11) ²	HPQ: A3404A, A3591B, A3740A, A5158A, A6684A, A6685A, A6795A ⁵	PowerPath 3.0.3 b 003 ^{3, 4}	See ¹

1. CLARiiON and Symmetrix can coexist in the SAN with the same server.
2. For HP-UX systems only:LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
3. Supported with HP-UX 11.0, 11i only
4. Powerpath supported on FC4500, FC4700, CX600, and CX400.
5. As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.
 - L1000 (product number A5576A)
 - L2000 (product number A5191A)
 - N4000 Revision A (product number A3639A)
 - N4000 Revision B (product number A3639B)
6. For FC4700, CX600, and CX400 only. SnapView and Mirrorview require Access Logix.
7. Shipped with Navisphere Manager. Integrator supports CA-Unicenter TNG 2.4, CA-Unicenter NSM 3.0, HP OpenView 6.1 or 6.3, and Tivoli NetView 6.0B or 7.1.
8. Manager v6.x is web based GUI that resides on an FC4700, CX600, CX400 or CX200 Array and is downloaded to the browser when the storage processor of the array is accessed. The browser requires a Manager Client that supports Java 1.4.1_01. Manager includes two Windows components for management of non-FC4700, non-CX600, non-CX400, non-CX200 arrays from a Windows 2000 host.
9. SAN Copy installation is supported on CX600, CX400, FC4700, and FC4700-2 storage arrays. Data movement is supported in and between CX series arrays, FC4500, FC4700, FC4700-2, FC5300, Symmetrix 8000 series, Symmetrix DMX Series, Symmetrix 3832, Symmetrix 3x30, and Symmetrix 3700 arrays.
10. Data movement between CLARiiON and Symmetrix requires Navisphere host agent attached to Symmetrix. Agents supported are Windows, SUN, HP/UX, AIX, and Linux
11. SAN Copy Operational restrictions apply when using SAN Copy with Clusters and AIX Systems. Refer to the SAN Copy release notice for more information.
12. SAN Copy installation is supported on CX600, CX400, FC4700, and FC4700-2 storage arrays. Data movement is supported with the following HP Storage Works RAID Array products (HSG80 controller): RA8000 with Firmware levels 8.5, 8.6 and 8.7, ESA12000 with Firmware levels 8.5, 8.6 and 8.7, MA8000 with Firmware levels 8.5, 8.6 and 8.7, EMA12000 with Firmware levels 8.5, 8.6 and 8.7, EMA16000 with Firmware levels 8.5, 8.6 and 8.7, and EVA3000 (HSV100 controller) and EVA5000 (HSV110 controller) with Firmware levels 2 and 3. Data movement is also supported with the following IBM storage arrays: FASiT200 with Firmware level 5.30.09.00, FASiT700 with Firmware level 5.21.01.02, and FASiT900 with Firmware level 5.30.12.00; and with the Sun storage array StorEdge T3 with Firmware level 1.18.02.
13. A Snapshot must not be in a clustered Storage Group.
14. Admsnap is not qualified with VERITAS Volume Manager

- Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
 - ATF/CDE is not supported on CX200, CX400 or CX600 arrays. ATF/CDE and PowerPath cannot co-exist on the same server.
 - EMC recommends that HBAs of different vendors not be used in the same host server.
 - Powerpath supported on FC4500, FC4700, CX600, CX400, and CX200. PowerPath Base supported on FC4500, CX200 only. CLARiiON and Symmetrix can co-exist in the SAN with the same server.
 - The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
 - This HBA is equivalent to the qLogic QLA2340.
 - Stratus ftServer OS release 2.1 or greater required for Stratus ftServers.
 - For FC4700, CX600, and CX400 only. SnapView and Mirrorview require Access Logix.
 - Shipped with Navisphere Manager. Integrator supports CA-Unicenter TNG 2.4, CA-Unicenter NSM 3.0, HP OpenView 6.1 or 6.3, and Tivoli NetView 6.0B or 7.1.
 - Manager v6.x is web based GUI that resides on an FC4700, CX600, CX400 or CX200 Array and is downloaded to the browser when the storage processor of the array is accessed. The browser requires a Manager Client that supports Java 1.4.1_01. Manager includes two Windows components for management of non-FC4700, non-CX600, non-CX400, non-CX200 arrays from a Windows 2000 host.
 - SAN Copy installation is supported on CX600, CX400, FC4700, and FC4700-2 storage arrays. Data movement is supported in and between CX series arrays, FC4500, FC4700, FC4700-2, FC5300, Symmetrix 8000 series, Symmetrix DMX Series, Symmetrix 3832, Symmetrix 3x30, and Symmetrix 3700 arrays.
 - Data movement between CLARiiON and Symmetrix requires Navisphere host agent attached to Symmetrix. Agents supported are Windows, SUN, HP/UX, AIX, and Linux
 - SAN Copy Operational restrictions apply when using SAN Copy with Clusters and AIX Systems. Refer to the SAN Copy release notice for more information.
 - Requires admHost software. See SAN Copy release notice for appropriate revision information.
 - SAN Copy installation is supported on CX600, CX400, FC4700, and FC4700-2 storage arrays. Data movement is supported with the following HP Storage Works RAID Array products (HSG80 controller): RA8000 with Firmware levels 8.5, 8.6 and 8.7, ESA12000 with Firmware levels 8.5, 8.6 and 8.7, MA8000 with Firmware levels 8.5, 8.6 and 8.7, EMA12000 with Firmware levels 8.5, 8.6 and 8.7, EMA16000 with Firmware levels 8.5, 8.6 and 8.7, and EVA3000 (HSV100 controller) and EVA5000 (HSV110 controller) with Firmware levels 2 and 3. Data movement is also supported with the following IBM storage arrays: FASi7200 with Firmware level 5.30.09.00, FASi7000 with Firmware level 5.21.01.02, and FASi7900 with Firmware level 5.30.12.00; and with the Sun storage array StorEdge T3 with Firmware level 1.18.02.
 - A Snapshot must not be in a clustered Storage Group.
 - Admsnap is not qualified with VERITAS Volume Manager
 - When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"
- This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.
- Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.
 - Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.
 - EMC does not support the Emulex equivalent of N8190-105. Check with NEC on where to download the latest supported firmware and boot BIOS for this adapter.

Microsoft Windows 2003

- EMC recommends that HBAs of different vendors not be used in the same host server.
 - For Windows 2003 STORPort drivers, support is limited to the following configurations: 1 HBA with 1 path to 1 SP; 2 HBAs, one with a single path to SPA and the other with a single path to SPB. Refer to HBA guides for expected device behavior. [NOTE: Powerpath not currently supported with STORPort driver.]
 - Powerpath supported on FC4500, FC4700, CX600, CX400, and CX200. PowerPath Base supported on FC4500, CX200 only. CLARiiON and Symmetrix can co-exist in the SAN with the same server.
 - PowerPath is currently supported only with QLogic SCSI Port miniport drivers and the Emulex full port driver.
 - The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
 - For FC4700, CX600, and CX400 only. SnapView and Mirrorview require Access Logix.
 - Shipped with Navisphere Manager. Integrator supports CA-Unicenter TNG 2.4, CA-Unicenter NSM 3.0, HP OpenView 6.1 or 6.3, and Tivoli NetView 6.0B or 7.1.
 - Manager v6.x is web based GUI that resides on an FC4700, CX600, CX400 or CX200 Array and is downloaded to the browser when the storage processor of the array is accessed. The browser requires a Manager Client that supports Java 1.4.1_01. Manager includes two Windows components for management of non-FC4700, non-CX600, non-CX400, non-CX200 arrays from a Windows 2000 host.
 - SAN Copy installation is supported on CX600, CX400, FC4700, and FC4700-2 storage arrays. Data movement is supported in and between CX series arrays, FC4500, FC4700, FC4700-2, FC5300, Symmetrix 8000 series, Symmetrix DMX Series, Symmetrix 3832, Symmetrix 3x30, and Symmetrix 3700 arrays.
 - Data movement between CLARiiON and Symmetrix requires Navisphere host agent attached to Symmetrix. Agents supported are Windows, SUN, HP/UX, AIX, and Linux
 - SAN Copy Operational restrictions apply when using SAN Copy with Clusters and AIX Systems. Refer to the SAN Copy release notice for more information.

- This kernel is supported with PowerPath v3.0.2 b069. Driver v6.04.00 or above must be used with QLogic HBAs and Powerpath. Booting from EMC storage arrays is NOT supported with PowerPath.
- EMC supports the following filesystems: ext2, ext3, reiserfs. If there is a customer requirement for a different filesystem, please submit an RPQ.
- CLARiiON and Symmetrix can co-exist in the SAN with the same server.
- PowerPath Base is supported on the FC4500 and CX200 only.
- Single HBA zoning is required regardless of the switch being utilized.
- QLogic v6.x series drivers and Emulex driver v1.23a support persistent binding and only support Class 3.**
- Requires BIOS v1.34 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
- Requires QLogic driver v6.04.01 (included in 2.4.9-e.24 kernel) and BIOS v1.83 available from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65.
- The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
- Emulex driver and BIOS available from <http://www.emulex.com>.
- QLogic v6.x series drivers and Emulex driver v1.2x support persistent binding and only support Class 3.**
- This kernel is supported with the QLogic v6.04.01 driver included in the kernel.
- For FC4700, CX600, and CX400 only. SnapView and Mirrorview require Access Logix.
- This kernel is supported with PowerPath v3.0.2 via RPQ only.
- Supported with QLogic driver v6.05.00.
- Shipped with Navisphere Manager. Integrator supports CA-Unicenter TNG 2.4, CA-Unicenter NSM 3.0, HP OpenView 6.1 or 6.3, and Tivoli NetView 6.0B or 7.1.
- Manager v6.x is web based GUI that resides on an FC4700, CX600, CX400 or CX200 Array and is downloaded to the browser when the storage processor of the array is accessed. The browser requires a Manager Client that supports Java 1.4.1_01. Manager includes two Windows components for management of non-FC4700, non-CX600, non-CX400, non-CX200 arrays from a Windows 2000 host.

19. SAN Copy installation is supported on CX600, CX400, FC4700, and FC4700-2 storage arrays. Data movement is supported in and between CX series arrays, FC4500, FC4700, FC4700-2, FC5300, Symmetrix 8000 series, Symmetrix DMX Series, Symmetrix 3832, Symmetrix 3x30, and Symmetrix 3700 arrays.
20. Data movement between CLARiiON and Symmetrix requires Navisphere host agent attached to Symmetrix. Agents supported are Windows, SUN, HP/UX, AIX, and Linux
21. SAN Copy Operational restrictions apply when using SAN Copy with Clusters and AIX Systems. Refer to the SAN Copy release notice for more information.
22. **SAN Copy installation is supported on CX600, CX400, FC4700, and FC4700-2 storage arrays. Data movement is supported with the following HP Storage Works RAID Array products (HSG80 controller): RA8000 with Firmware levels 8.5, 8.6 and 8.7, ESA12000 with Firmware levels 8.5, 8.6 and 8.7, MA8000 with Firmware levels 8.5, 8.6 and 8.7, EMA12000 with Firmware levels 8.5, 8.6 and 8.7, EMA16000 with Firmware levels 8.5, 8.6 and 8.7, and EVA3000 (HSV100 controller) and EVA5000 (HSV110 controller) with Firmware levels 2 and 3. Data movement is also supported with the following IBM storage arrays: FASi7200 with Firmware level 5.30.09.00, FASi7700 with Firmware level 5.21.01.02, and FASi7900 with Firmware level 5.30.12.00; and with the Sun storage array StorEdge T3 with Firmware level 1.18.02.**
23. A Snapshot must not be in a clustered Storage Group.
24. Admsnap is not qualified with VERITAS Volume Manager
25. **QLogic v6.x series drivers and Emulex driver v1.x support persistent binding and only support Class 3.**

- The LP8000-EMC HBA has a permanent GBIC, and does not have copper cable support.
- Powerpath supported on FC4500, FC4700, CX600, and CX400.
CLARiiON and Symmetrix can co-exist in the SAN with the same server.
- ATF/CDE is not supported on CX200, CX400 or CX600 arrays. ATF/CDE and PowerPath cannot co-exist on the same server.
- The Volume Manager component of PowerPath 4.x is not currently supported with Sun SunCluster products.
- The Volume Manager component of PowerPath 4.x does not currently support admSnap.
- For FC4700, CX600, and CX400 only. SnapView and Mirrorview require Access Logix.
- Shipped with Navisphere Manager. Integrator supports CA-Unicenter TNG 2.4, CA-Unicenter NSM 3.0, HP OpenView 6.1 or 6.3, and Tivoli NetView 6.0B or 7.1.
- Manager v6.x is web based GUI that resides on an FC4700, CX600, CX400 or CX200 Array and is downloaded to the browser when the storage processor of the array is accessed. The browser requires a Manager Client that supports Java 1.4.1_01. Manager includes two Windows components for management of non-FC4700, non-CX600, non-CX400, non-CX200 arrays from a Windows 2000 host.
- SAN Copy installation is supported on CX600, CX400, FC4700, and FC4700-2 storage arrays. Data movement is supported in and between CX series arrays, FC4500, FC4700, FC4700-2, FC5300, Symmetrix 8000 series, Symmetrix DMX Series, Symmetrix 3832, Symmetrix 3x30, and Symmetrix 3700 arrays.
- Data movement between CLARiiON and Symmetrix requires Navisphere host agent attached to Symmetrix. Agents supported are Windows, SUN, HP/UX, AIX, and Linux
- SAN Copy Operational restrictions apply when using SAN Copy with Clusters and AIX Systems. Refer to the SAN Copy release notice for more information.
- SAN Copy installation is supported on CX600, CX400, FC4700, and FC4700-2 storage arrays. Data movement is supported with the following HP Storage Works RAID Array products (HSG80 controller): RA8000 with Firmware levels 8.5, 8.6 and 8.7, ESA12000 with Firmware levels 8.5, 8.6 and 8.7, MA8000 with Firmware levels 8.5, 8.6 and 8.7, EMA12000 with Firmware levels 8.5, 8.6 and 8.7, EMA16000 with Firmware levels 8.5, 8.6 and 8.7, and EVA3000 (HSV100 controller) and EVA5000 (HSV110 controller) with Firmware levels 2 and 3. Data movement is also supported with the following IBM storage arrays: FAStT200 with Firmware level 5.30.09.00, FAStT700 with Firmware level 5.21.01.02, and FAStT900 with Firmware level 5.30.12.00; and with the Sun storage array StorEdge T3 with Firmware level 1.18.02.**
- A Snapshot must not be in a clustered Storage Group.

11	HPQ: A6795A ¹ , A7298A (LP982), A9782A ^{13, 14} , AB232A (LP9802), DS-KGPSA-CA (LP8000), FCA2101 (LP952), FCA2214 (QLA2340), FCA2354 (LP9002), FCA2384 (LP9802), FCA2404 (LP9802), FCA2408 (LP982), KGPSA-DA (261329-B21), KGPSA-EA	Generic MM-LC/xx	1
12	HPQ: A6826A ^{13, 14} , Dual-port mezzanine controller card, FCA2214DC (QLA2342), FCA2355 (LP9002DC), FCA2404DC (LP9802DC)	Generic MM-LC/xx	2

1. As of April 2, 2003 the A6795A HBA is no longer supported on the following platforms as an add-on product. However HP will continue to support the A6795A HBA on existing installations.

L1000 (product number A5576A)
L2000 (product number A5191A)
N4000 Revision A (product number A3639A)
N4000 Revision B (product number A3639B)

- Tru64 4.0F/4.0G: TruCluster 1.6 environment only.
- A4800A and A5159A HBAs are both capable of Ultra 1 speeds, but ship from HP with a default setting of FWD. Symmetrix is supported at Ultra 1 speeds with both these HBAs. Ultra 1 can be enabled in the V-Class, N-Class, and L-Class, A-Class and Superdome PDC firmware. V-Class supports the A4800A Only.

HP e3000 MPE SYSTEMS – The above note applies but only includes the A-Class and N-Class Servers. The HP e3000 A-Class does not support the dual port HBA A5159A.

- The cables are the same as the Cxx mini 68S ('VHDCI' 8mm to SCSI3). Cables require termination at host end for N-Class, L-Class, A-Class and Superdome. Can be terminated either on cable, or on HBA, but not both.
- SCSI cable length may not exceed 12 meters when running in either Ultra SCSI or Ultra2 LVD SCSI speeds.
- Symmetrix 5567 code is required to support Ultra2 LVD SCSI director (DP3-U2SD4L).
- EMC recommends that HBAs of different vendors not be used in the same host server.
- (Adaptec AHA-2944UW)
- Used in clustered environments only.
- (HHBA-5101BK-01)
- The HP D8602B Tachlite Fibre Channel HBA does not come standard with a GBIC. An optional shortwave optical GBIC, HP part number D6975A, must be ordered separately from HP.
- KZPSA-BB [FWD] has been discontinued by HPQ (Compaq).
- Required Patch PHKL_28569, PHKL_26938 and 2port 2Gig driver version 11.11.01.
- Host must be configured as a 64Bit operating system.

1. (QLA2200) For IBM xSeries and Netfinity servers only.

2. EMC DP3-FCD42G and EMC DP3-FCD42GS supported on DYNIX/ptx 4.4.8, 4.4.9 and 4.4.10 only.

3. Used in clustered environments only.

4. Symmetrix FICON (DP3-FND2x), for both singlemode (SM) and multimode (MM) uses SC connectors. When connecting Symmetrix FICON to a Connectrix ED-64M or ED-140M use the MM and SM cable choices for SC/LC. Refer to the FICON Board Release Notes for all other cases.

5. This HBA is equivalent to the qLogic QLA2310.

6. This HBA is equivalent to the qLogic QLA2340.

7. When flashing HBA bios on the HS20 FC Expansion card, you may receive the error message: "Error erasing flash at I/O address 2600 (this is the second port on the HBA)"

This is a known issue as the expansion card only has one flashable port. IBM is working to resolve this and this message can be ignored.

8. **Connection through an EMC SAN fabric is supported. See the Fibre Channel Section of this guide for supported switches in the SAN fabric.**

9. **Ports from the 2 port switch module(48P7062) must be directly connected to ports on the EMC storage system.**

5. Hi Perform Fibre Copper
6. Hi Perform Long Wave
7. Used in clustered environments only.
8. Equivalent Unisys Cables: SCI6-68S, SCI12-68S, SCI19-68S, SCI25-68S ; CBL133-XX (XX=length per PB), CBL224-OSM (4' VHD 68 to HD 68), CBL2210-OSM (10' VHD to HD 68); ADP25421-FTM (for CBL 133-XX to VHD HBA)
9. Equivalent Unisys Cables: FC 5-M, FC 10-M, FC 30-M, FC 50-M, FC100-M; CBL144-XX (SCSI duplex to SCSI duplex, XX=50, 100, 300, 400, 500).
10. Linux v2.4.x Kernels support a maximum of 128 devices per system.

Cables and Connectors

Cables

LC and SC fiber-optic connector types are illustrated in Figure 1.
 MM = Multimode, SM = Single-mode, SC = Standard Connector, LC = Lucent Connector, See the Connector Types table.

As an example for determining cable model:
 From the Single Host Tables in the column titled "Cable Models," the entry MM-SC/xx is interpreted as follows:
 MM = mode, SC = HBA connector end, xx = the opposite cable end, which could be SC or LC.
 For MM SC/LC, use cable FCxM-50MSLC, where x = desired length in meters.
 For MM SC/SC, use cable FCxM-50M, where x = desired length in meters.

- Ships with SC male-to-female adapter.
- For cable lengths between 100 and 500 meters, contact AMP Incorporated at 717-986-5710 or a local fiber-optic cable supplier/installer.
- Provided with an SC coupler, which allows connection to existing fibre cable plants using SC connectors.
- Do not mix 50 micron and 62.5 micron cables.
- For GigE direct connection and connection to patch panels and Ethernet switches using SC connectors.
- For GigE connection to patch panels or Ethernet switches using LC connectors.
- 3 meter cable: For ESCON connection to existing 62.5 micron multimode cabling using SC connectors. Other lengths: For ESCON connection to patch panels or ESCON switches using SC connectors.
- For GigE connection to patch panels or Ethernet switches using LC connectors. For ESCON direct connection or connection to patch panels or ESCON switches using LC connectors.

FIGURE 1. LC and SC Fiber-optic Connectors with SC Coupler.
 The Lucent LC has a form factor about half the size of the SC connector, and uses an insertion release mechanism similar to those on telephone plugs.

ESCON Adapter Cables

Storage System	Connection	Model	Description	Comments
Symmetrix 8000 Series	ESCON	FC3M-MTSCADP	MTRJ/ESCON – 3 meter with ESCON coupler.	For connecting Symmetrix to IBM directors via ESCON 62.5 micron cable using new MTRJ connectors.
Symmetrix DMX Series	ESCON	FC3M-LCESCADP	LC/ESCON – 3 meter with ESCON ST coupler.	For ESCON connection to existing 62.5 micron cable using ESCON duplex connectors.
Symmetrix DMX Series	ESCON	FC3M-MTSCADP	MTRJ/ESCON – 3 meter with ESCON coupler.	For connecting Symmetrix to IBM directors via ESCON 62.5 micron cable using new MTRJ connectors.
Symmetrix DMX Series	ESCON	FC3M-MTLCADP	MTRJ/LC – 3 meter with LC coupler.	For connecting Symmetrix to IBM directors via ESCON 62.5 micron cable using new MTRJ connectors.

Connector Types

MM = Multimode, SM = Single-mode, SC = Standard Connector, LC = Lucent Connector (LC and SC fiber-optic connector types are illustrated in Figure 1.)

Storage and FC Hub/Switch Models	Adapter	Interface	Connector Type	#of Connections-Mode(s)	Comments
CLARiON CX600			LC	8 MM	2 Gbit, 4 connects per SP
CLARiON 4700-2			LC	4 MM	1 or 2 Gbit, 2 connects per SP
CLARiON 4700			SC	4 MM	1 Gbit, 2 connects per SP
CLARiON 4500			SC	4 MM	1 Gbit, 2 connects per SP
CLARiON 5300			SC	4 MM	1 Gbit, 2 connects per SP; requires a MIA for each connect

1. 1Gb mode requires 5567.38.2, 2 Gb mode requires 5568.

2. Minimum Symmetrix microcode revision 5567.34.19A.

Fibre Channel

Switched Fabric Topology Parameters

For single fabrics consisting of McData and Brocade directors/switches & for single fabrics consisting of Cisco MDS, and Brocade, and McDATA directors/switches, see the EMC Topology Guide, at <http://avatar.eng.emc.com>.

Server / HBA model limitations are subject to switch support as listed in Fibre Connectivity: Switch Interoperability Application. EMC recommends the latest code revisions be used on all fabrics.

Switch Interoperability describes the limitations for a mixed Fibre Channel switched fabric topology. The fabric topology envelope limitations and the switch management applications are defined in the attribute columns.

The following is an example showing how to utilize the table:

1. The objective of this example are to construct a SAN consisting of three switches, A, B, and C, and to verify firmware and management application compatibility. In this case you need to verify that each of these components interoperates with the other two.
2. As the data shows, devices listed in the Switch column can be the same SAN with devices listed in the Interoperable Switch column. For example: switch A running firmware X can interoperate with switch B running firmware Y, and switch A running firmware X can interoperate with switch C running firmware Z.
3. In order to verify that switch B running firmware Y can also interoperate with switch C running firmware Z, find switch A in the Switch column and switch B in the Interoperable Switch column. These two steps verify that all three firmware levels are compatible with each other.

For DWDM support, see the Distance Extension Solution Interoperability Application and the "Distance Extension Considerations" in the EMC Networked Storage Topology Guide at <http://avatar.eng.emc.com>.

For McData switches and directors, Single Mode optics support 10km, 20km, and 35km distance switch to switch.

For Brocade switches and directors, Single Mode optics support 10km, 20km, and 35km distance switch to switch.

- Auto-negotiation with 200-563-920 requires Engenuity 5568.47.17.
- Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- The maximum number of ISLs (Inter-Switch Links) between two switches in a fabric.
- The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric.
- Obsolete (End of Support).**
- For single fabrics consisting of McData and Brocade directors/switches and single fabrics consisting of Cisco MDS and Brocade and McDATA fabrics, see the EMC Topology Guide available at <http://avatar.eng.emc.com>**
- SecureOS is not currently supported
- ESN Manager 2.1.
- Hard set ISL E-port speed to 1 Gb or 2 Gb.
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- CLARiiON environments only: groups of 4 consecutively numbered ports may be referred to as a "quad". The 4 quads correspond to ports 0 - 3, 4 - 7, 8 - 11, and 12 - 15. Only one port within any quad may be connected to an array SP port. The remaining 3 ports within the quad may be used for connection to HBA ports and as ISLs.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- For fabric and zone size considerations, refer to the latest Connectrix Planning Guide and Release Notes.
- Upgrade required to 4.01.00.
- Firmware revision levels distributed and supported by Bull. Please see appropriate Bull documentation.
- This is a Brocade Silkorm 2800 (16 ports)
- Mirrored fabrics with redundant switch hardware are strongly recommended.
- Zoning, discovery, and statistics for ESN Manager 2.0 or earlier are not available.
- No support currently for QuickLoop.
- EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
- EMC ControlCenter is supported with 5.1.1 SP3 or above. ESN Manager is not currently supported.
- Brocade 2400 and 2800 require the purchase of the "extended fabric license" from Brocade for long distance applications.
- For QuickLoop support, see Fibre Connectivity: Switch Interoperability Application.
- No ISLs supported.
- Host connectivity only.
- Single Brocade 6400 cabinet only.
- 20 VSANS maximum, with 12 domains per-VSAN.**
- For single fabrics consisting of McData and Brocade directors/switches & for single fabrics consisting of Cisco MDS, and Brocade, and McDATA directors/switches, see the EMC Topology Guide, at <http://avatar.eng.emc.com>.**
- Of this number, a maximum of 16 domains can consist of a single firmware family (i.e. 2.x, 3.x or 4.x).
The total number of ISL ports allowed in the fabric is 212.
The total number of user ports allowed in the fabric is 652.
- Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)**

Mixed Storage Environment Matrix

EMC continues to qualify the individual non-EMC storage arrays in environments that share resources (SAN, Server, and HBA) with EMC equipment and in the interest of simplicity, we provide the following statements on the support of those environments. EMC will continue to support EMC manufactured or EMC supplied equipment in environments that meet the following criteria. Any environment that does not adhere to these requirements would require an RPQ for identification of supportability.

Requirements:

1. Clariion and Symmetrix Storage

EMC storage (Clariion & Symmetrix) interoperability support is listed as part of the Base Connectivity, Clustered Host and Switch Interoperability tables of the EMC Support Matrix. It should be understood that arrays with matching matrix configurations can be used in a shared SAN, Shared Server or Shared HBA, unless explicitly noted. PowerPath and other load balancing software versions must be reviewed independently for mutual array support or coexistence concerns.

2. Compatibility with Non-EMC Storage

a. Shared SAN, Shared Server, Shared HBA

When working in a heterogeneous storage environment the fabric components (switches, directors, and HBAs) along with the operating system level, HBA models, drivers and firmware must all be at the EMC supported levels. Non-EMC storage connecting to this fabric environment must also be supported through their respective OEM vendors in the stated environment. Deviations in any of the supported levels for any component can either be handled through EMC's or the respective vendor's RPQ process. This will ensure that all storage arrays remain supported through their respective OEM vendors.

b. Individual Storage Vendor Zoning

No matter which sharing model you choose (Shared HBA, Shared Server, or Shared SAN), EMC recommends that you limit the amount of possible interactions between the arrays. This will assist in troubleshooting, maintenance and management of the environment.

To limit the interactions and dependencies we recommend that you do not include storage array ports from different vendors in the same zone. Multiple zones can be created that use the same HBA, as long as the storage arrays are in separate zones with that common HBA. Zoning in this fashion will ensure that there are no direct interactions between the different storage arrays.

c. Third Party Load Balancing and Path Management Software

Load balancing and path management software compatibility cannot be inferred by any table, and unless concurrent support for such software is explicitly listed in the applicable Base Connectivity sections, then support will require an RPQ submission.

d. Metavolume Creation and Striping

To further limit the dependencies and interaction of these arrays, we recommend that you do not use logical partitions from separate array vendors in the same metavolume or stripe set. Doing this will complicate troubleshooting, maintenance activities and follow on management of the arrays.

No.	Storage System	Safe Neighbor Policy
1	Generic Fibre Channel Bridge, Generic Fibre Channel Tape, HPQ StorageWorks, HPQ SureStore E XP-1024 , HPQ SureStore E XP-256, HPQ SureStore E XP-512, Hitachi HDS 7700E, Hitachi HDS 9900, IBM ESS, Sun StorEdge Arrays	Shared HBA, Shared SAN, Shared Server

Distance Extension Solutions

Solutions using the Symmetrix DMX Multi-Protocol Channel Director (MPCD) for SRDF over GigE and the Symmetrix 8000 Native Gigabit Ethernet Director must be validated using the Pre-Sales Questionnaire (PSQ) process. Most devices in the IP cloud that follow IEEE standards may be used for LAN/MAN/WAN connectivity.

- Maximum distance between sites (for Fibre Channel ISLs distance is measured as total distance between E-ports including switch to DWDM interface), or optical power budget limit per system spec (whichever is shorter).
- 850 nm multi-mode and 1310 nm single-mode Fibre Channel protocol connections for FC-SW attach.
- FC-SW Inter-Switch Link (ISL) extension
- Maximum distance found in this table specify support parameters around connectivity only. You should work closely with EMC field personnel and professional services to determine whether application requirements will be met over these extended distances. Distances greater than those specified require an RPQ.
- All E-ports or ISLs should be hard set to either 1 Gb or 2 Gb in unison with the client-side interfaces to DWDM units.
- 2:1 GFP card supported for Fibre-Channel
- IBM OEMs this product and sells as the IBM 2029.
- The following manufacturers and systems is the same product: Adva(FSP-II), Alcatel (Optinex 1690), Siemens (Waveline EL2), InRange (Spectrum).
- Only 1310 nm single-mode Fibre Channel connections supported.
- Support with ONS 15501 (Erbium Doped Fiber Amplifier) units per one fiber distance strand for Protected and Unprotected environments. Minimum supported firmware 1.2, Hardware Rev 303041.
- Unprotected or splitter-protected.
- Minimum supported Transponder firmware 1.59. Minimum supported MUX/DeMUX motherboard firmware 2.50. Minimum supported line card motherboard firmware 2.48. Minimum supported CPU firmware 1.24.
- Minimum supported firmware 1.05V.
- OEM from Pandatel.
- Splitter-protected.
- GRDM 850nm/1310 nm cards must be utilized for Fibre Channel protocols.
- No mixing of protocols allowed on the same GRDM card --- FC only.
- UPSR and BLSR protected.
- No direct host or storage connections into system (except for ESCON links).
- Minimum supported firmware 4.1.2.
- 2Gb FC link speeds with the WCIRG-2.5Gb Circuit Pack
- The ONLINE Metro can be used with UPSR or BLSR protection options.
- FLX-2000-40 requires rev 3.0.
- N-port extender (HBA to switch) solution.
- Supported for Solaris 2.6 with JNI FC-1063-EMC, JNI FC64-1063-EMC HBAs. Refer to Sun Base Connectivity for currently supported Solaris/JNI driver versions.
- Support for Windows NT 4.0 with SP6A with Emulex LP7000E-EMC and LP8000-EMC. Refer to Intel based Windows Servers (Fibre Channel) Base Connectivity for currently supported Windows NT/Emulex driver versions.
- FC-SW ISL Extension: >500 meters < 40 kilometers solution.
- Distances up to 10 km can be obtained using LW GBICs in qualified switches.
- UPSR protected.
- Minimum supported firmware: 1.05v Minimum network element processor: met_2.6.3 Minimum service channel processor: 2.6.4. Minimum OC-48-Transceiver (191.90 and 195.50 THz): 2.6.4z, 2.6.4
- The following manufacturers and systems are the same product: CNT (Inrange) Spectrum 2000
- WCM-MC2G Circuit Pack for 1Gb & 2Gb FC support.
- Minimum Release level 2.4.4 for NEMI support.
- CLARiiON (Extended Fabric License required for distances >= 10 kilometers) Solution requires 2 extenders.
- No longer available
- MirrorView 1.2 or higher.
-

- Maximum distance between sites (measured as total distance between E-ports) without RSM, 40Km with RSM and Protected Mode, or optical power budget limit per system spec (whichever is shorter).
38. ESCON 4:1 and 8:1 cards supported. Escon SRM circuit pack used for 8:1 Escon connectivity. Minimum Firmware level required for 8:1 SRM is 6.0.37
 39. UltraNet Wave Optimizer TDM is qualified.
 40. Extended Distance Solutions Channel Extension
 41. Solution requires dedicated FC switch that must be provided by CNT.
 42. This configuration requires completion of a Pre-Sales Questionnaire (PSQ).
 43. Minimum AccessLogix: CLARiON FC4700: 8.45.5.x, CLARiON CX600: v02.01.1.60.5.006, CLARiON CX400: 02.02.1.40.5.xxx.
 44. 8 ESCON X 4 Fast Ethernet
 45. Minimum microcode for Symmetrix 4.8 and 8000 Series is 5x65.
 46. EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
 47. Deployments must be fully redundant.
 48. Minimum microcode for Symmetrix 8000 is 5567.36.xx. Minimum microcode for Symmetrix DMX is 5669.
 49. Minimum supported firmware Release 8.2.1 NE Software 10-May-02 (rev. 4)
 50. For ESCON: 8:1 Escon supported with 8DM25 Circuit Pack.
 51. UBB (OTPM UBB) circuit pack for 1Gb and 2Gb FC support. UBB provisioned to ISC3PEER mode.
 52. 1310 nm single-mode Fibre Channel protocol connections for FC-SW attach to both 2DM25 and UBB circuit packs.
 53. ESCON traffic with LSBB Circuit Packs recommended (LSBB OTPM)
 54. Fibre Channel traffic through ELSBB Circuit Packs (ELSBB OTPM)
 55. 2DM25 (MUX OTU) 2:1 multiplexer circuit pack for 1Gb FC support. 2DM25 provisioned to FC-100 mode.
 56. EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric. **distance is limited to 200km**
 57. **CN2000 equipped with A-10-304-XX Modular Maincard**
 59. Interfacing through DWDM is supported via SONET client interfaces.
 60. **For guidelines and limitations regarding distance support please refer to the EMC Networked Storage Topology Guide (available through Avatar and PowerLink) and the equipment vendor documentation.**
 61. Refer to the document "Lucent OptiStar" on Avatar for configuration guidelines.
 62. EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
 63. Release NCB software SNM version 1.1
 64. Release CLIP firmware version 1.26 (not field soft upgradeable but requires a physical hardware upgrade of a chip on the CLIP board).
 65. EMC considers Wave Division Multiplexing technologies (Coarse and Dense WDM) to be mature and industry proven. EMC no longer tests standard WDM technology on site therefore devices covered under this support model are not physically tested in the EMC engineering lab. Engineering will provide Best Reasonable Effort (BRE) support for this WDM device.
 66. Nishan switches can only be configured to connect locally to the Symmetrix or CLARiON systems or as an e-port connection to a FC-Switch. No host attach to the Nishan switches is supported and host IO over the iFCP link is also not supported.
 67. Each SAN Island should include no more than 2 switches (one Nishan switch and one other vendor switch)
 68. Switch must be dedicated for the SRDF application. Firmware a2.5.0d is required.
 69. Validated for connectivity and performance only. Virus protection and dual disk support validated by Inrange.
 70. INRANGE must order application software part number 98-154.EMC which is installed at the factory.
 71. SRDF between Symmetrix DMX and Symmetrix 8000 in this configuration requires an RPQ.
 72. Minimum Access Logix: CLARiON FC4700: 08.49.xx or higher, CLARiON CX600/400: 02.04.1.60.x.xxx or higher.
 73. 4:1 and 8:1 TDM cards qualified.
 74. Sub-lambda service concentrator "4xAny" supported for 2:1 Fibre Channel and 4:1 ESCON. No protocol mixing supported on a single "4xAny" concentrator.
 75. E-ports connected to High Frequency DRW cards, residing in a 4-by-any card.
 76. Minimal IOS version: 12.1(10) EV2
 77. 15530-OSCM OSC daughter module: H/W 3.0, Firmware 0.52
 78. 15530-MDX-04H0 4 Channel Mux/Demux module: H/W 1.0, Firmware not applicable
 79. 15530-TSP1-2912 Transponder linecard 29-Ch splitter protected: H/W 5.8, Firmware 3.C
 80. 15530-CHAS-NEBS 15530 NEBS compliant chassis: H/W 3.1, Firmware 3.C
 81. 10:1 ESCON Connectivity supported for "ESCON Aggregation Card (ESCON Multiplexing Line Card)"
 82. The WCIRT-e CWDM Card Circuit Pack will accept 1 E-port and the speed must be "User defined" (1Gb or 2Gb).
 83. SFADM02-e (SONET/SDH-Framed Data ADM) Circuit Pack will accept 2 E-ports at 1Gb (100MB) speed.
 84. When SFADM02-e (SONET/SDH-Framed Data ADM) Circuit Pack is operating in "Distance Buffering" mode ON, Connectrix "-B" switches (Brocade) must operate in Open Fabric Mode (intermode 1), and any Extended Distance mode must be disabled.
 85. Minimum microcode for Symmetrix 8000 Series is 5567.36.xx.
 86. May be attached directly to a Symmetrix RF port without a switch.
 87. The following manufacturers and systems are the same product: CNT (Inrange) Spectrum 3000, Fujitsu Network Communications "FLASHWAVE"
 88. Use minimum code release 6.0.37 for Nortel Optera 5100 and 5200 for OTR supports with the Cisco MDS switch.
 89. Requires the Cisco IP Storage Services Module for MDS.
 90. The Cisco IP storage services module is currently supported for EMC Early Customer ship only, EMC personnel should refer to sales advantage for more information.
 91. **Minimum supported firmware is the "15454-R4.5.0 SW"**
 92. **Client Side E-port connections are supported to the "Multi-Rate Transponder 100MB-2.5Gb" (15454-MRP-L1-YY.Y <1+1 line-side protection> or 15454-MR-L1-YY.Y <redundant ISLs; no line-side>).**
 93. **Multimode and Singlemode ISLs are supported**

Tape Support

Tape to ESN Connectivity

Note: It is important to identify not only the connection technology of the tape drives, but also the connection technology of the tape library controller. The library may use an external FC to SCSI bridge, an embedded bridge or a proprietary FC connection kit. The method of connection is essential to the ESN connectivity reliability and must be noted to identify if the system configuration is truly a qualified solution.

Library partitioning effects the SAN environment at both the OS level as well as the backup software level. Though partitioning is not prohibited in an EMC solution, support for the backup software as well as the library's partitioning solution must be provided separately via the library vendor and/or the backup software vendor. The customer should make sure that partitioning and backup software integration are performed by persons trained/certified to do such work. SCSI bridges listed provide support for both HVD and LVD SCSI connections, unless explicitly stated otherwise.

a. Check the backup software supplier's device matrix to ensure that these tape drives and Fibre Channel-to-SCSI bridges are supported for your particular operating system.

b. The backup software supplier may require optional software packages for its software to use a tape drive.

c. Unless otherwise stated, the drives listed are SCSI attached and are supported with FC-to-SCSI bridges as listed.

d. When operating in an Open Fabric environment, review the current Switch Interoperability Application and the Interoperability Solution at

<http://avatar.eng.emc.com>, part number 300-000-067, for full list of firmware requirements and supported solutions.

For additional information please refer to the ESN Topology Guide at <http://avatar.eng.emc.com> (under tools)

- Reference the Mixed Storage Environment Interoperability Application for HBA sharing support.
- Bridge not applicable. Directly attached to FL_ports on a Brocade Switch.
- Refer to Heterogeneous switch table for the current list of supported switch combinations and supported firmware combinations
- Unless otherwise specified, use the common EMC supported HBA drivers (Symmetrix and CLARiiON) specified in the Base Connectivity tables.
- Recommend firmware levels: 18N2, 25D4
- Reference the Switch Fabric Topology Parameters and Mixed Storage Environment Interoperability Applications for code levels.
- Tape drive is configured as public FL port. QuickLoop fabric assist and translative mode is not supported.
- For HP-UX systems only: LVM Bad block reallocation (BBR) should be disabled and the LVM mechanism for marking blocks defective when a medium error is returned should be disabled for all HP LVM logical volumes residing on EMC devices. This can be accomplished by utilizing the upper case "N" flag when creating the logical volume or with the lvchange command. Examples: lvchange -r N /dev/vg01/lvol1 or lvcreate -r N /dev/vg01. The exception to this rule is if the logical volume is host mirrored using HP Mirror-UX, then this flag should not be set.
- Only single-ported applications of the STK 9840 and T9940 is supported. Simultaneous use of both ports may result in contention and is not supported.
- Moving the Fibre Channel cables associated with the tape or with the server communication to a different switch port while I/O is running will result in I/O failures and device lockout. If this occurs, you may be required to either power cycle the tape device or return FC cables to their original ports, and manually release the tape device to return the system to working order. It will then be necessary to restart the backup job.
- May also be used in open fabric mode (see Switch Interoperability Matrix for open fabric parameters).
- EMC DS-16B-00 contains multi-mode GBICs (850 nm Fibre Channel) "Extended Fabric License" feature can be utilized. EMC DS-16B-02 contains multi-mode GBICs (1310 nm Fibre Channel) "Extended Fabric License" feature can be utilized.
- EMC DS-16B2 for "Extended Fabric License", use minimum 3.0.2f firmware, 1 ISL per quad only. Extended Fabric License can be used only in homogeneous Brocade fabric.
- Symmetrix microcode version: 5266.33.23 or higher, 5566.35.23 or higher, 5267.22.15 or higher, 5567.29.15 or higher.
- EMC recommends that HBAs of different vendors not be used in the same host server.
- CLARiiON
- JNI SBus HBAs in Sun Servers (not applicable for EMC common driver support). The CLARiiON SBus driver used in conjunction with the JNI HBA does not support tape devices, therefore a separate JNI HBA with a different driver must be used to access the tape library. This requirement does not apply to SBus systems using the Emulex LP9002S-F2 HBA. This situation requires two different drivers: A special EMC CLARiiON driver for the JNI cards communicating to the CLARiiON storage system. The JNI-supplied driver for the JNI card communicating with the tape library. What to do: Contact CLARiiON Technical Support to obtain the special EMC CLARiiON driver and support notes S000412A and S000710 for detailed instructions (the JNI HBAs need to be renamed). Download the JNI-supplied driver (Revision 2.5.9) for the JNI card communicating with the tape library, which is fcaw.pkg under the jni heading, from <http://www.jni.com/Drivers/drivers3.cfm?ID=10&OSID=8>. CAUTION: Do not use fcaw.pkg under the emc subheading. Order the standard HBA model (HBAGL-SUNS). This model includes a driver that the customers should ignore or discard since they will be using the drivers referenced in 1 and 2 above.
- Supported for both 1 Gb and 2 Gb operation. See device vendor capability for link speed autonegotiation details.
- Moving the tape connection on the back panel of the ADIC (Pathlight) SAN Gateway requires a reboot of the bridge.
- Shortwave connections only. Must submit an RPQ for longwave environments.
- ADIC (Pathlight) SAN Gateway Virtual Private SAN (VPS) was used during validation to map SCSI-attached target devices to server HBAs.
- ADIC Management Console (AMC) 2.6 or above.
- Corresponds to IBM SDG 2108 model G07.
- Set switch to 1 GB mode.
- Bridge ports should be configured as FC-SW.
- Recommend two SCSI tape targets per SCSI bus including robotics device.
- All switches must be set Open Fabric mode when using an MDR bridge with any other combination of ED-1032, ED-xM, ES-xM, or McData switches.
- OEMed as STK 3x00.
- "x" corresponds to the number of independent SCSI buses available (x = 1, 2, or 4).
- OEMed as STK 3250 and ADIC FC250.
- An HP A4689A corresponds to a Crossroads 4450. An HP A4688A corresponds to a Crossroads 4250.
- Must be used in Gb mode. Check with vendor for availability for shipment to Pacific Rim. Not supported with the Comm Vault Galaxy.
- NetWare NSS has 120 LUN per port limitation. If NSS will not be used, 128 LUNs is supported.
- Maximum number of NWFS volumes that can be mounted is 64.
- Shared HBA environments between disk and tape/tape libraries are not supported for Novell.

36. Recommended Firmware levels: 29V0
37. Tru64 V5.1 latest qualified Patch Kit-0006 (T64V51B20AS0006-20030210).
38. **Tru64 V5.1A latest qualified Patch Kit 6 (T64V51AB24AS0006-20031031).**
39. EMC DS-32B2 or ED-12000B for "Extended Fabric License" use minimum 4.0.2a firmware, 1 x L2 or 2 x L1 ports per quad only.
40. V5.x:255 LUNs/Symmetrix Fibre director port (LUNs 001-0FE valid) Symmetrix 8000 Series only, OVMS director flag required (minimum 5265.48.30 or 5566.26.19), LUN 000 must be mapped to gatekeeper device, LUN 000 is not usable by Tru64 host.
41. **Tru64 V5.1B latest qualified Patch Kit 3 (T64V51BB24AS0003-20030929).**
42. May operate in Open Fabric mode, but must be directly connected to a "M" type or McDATA switch.
43. Supported inside the HP A6356A Interface Manager
44. Review the current switch interoperability configurations for supported combinations of heterogeneous switches and firmware levels.
45. When working in a heterogeneous storage (Disk or Tape) environment the fabric components (switches, directors, and HBAs) along with the operating system level, HBA models, drivers and firmware must all be at the EMC supported levels. Non-EMC storage (Disk or Tape) connecting to this fabric environment must also be supported through their respective OEM vendors in the stated environment. Deviations in any of the supported levels for any component can either be handle through EMC's or the respective vendor's RPQ process. This will ensure that all storage remain supported through their respective OEM vendors.
46. **QLogic driver obtained from http://www.qlogic.com/support/oem_detail_all.asp?oemid=65 is required.**
47. **Requires firmware 5.05.00 (This firmware revision is only to be used on ES-4300)**

Tape Library

1. Check the backup software suppliers device matrix to ensure that these tape libraries, tape drives and Fibre Channel-to-SCSI Bridges are supported for your particular operating system.
 2. The backup software supplier may require optional software packages for its software to use a tape library.
 3. When operating in an "Open Fabric" environment, review the current Switch Interoperability Application and the Topology Guide at <http://avatar.eng.emc.com>, for a full list of firmware requirements and supported solutions.
 4. SCSI attached libraries are supported with the FC-to-SCSI bridges defined in the Tape To ESN Connectivity Interoperability Application.
- Fibre Channel based libraries contain an embedded FC-to-SCSI bridge. See the Tape To ESN Connectivity Interoperability Application for FC-to-SCSI bridge information.

Not qualified for direct attachment with DS-xM, ES-xM or McData switches

1. Supported with CLARiiON attach only.
2. Currently not support with Emulex Sbus adapters
3. Specified version or above is recommended.
4. Fiber Channel Option revision T520
5. Fibre Channel library is not supported for direct attachment with DS-xM, ES-xM, or McData switches
6. **Fibre Channel based libraries contain an embedded FC-to-SCSI bridge. See the Tape To ESN Connectivity Interoperability Application for FC-to-SCSI bridge information.**

EMC Data Manager (EDM) 5.0.0 Matrix

November 12th, 2003 13:02

Supported Server OS and Platforms

EDM Network Backup Support

EDM Symmetrix Path Support

EDM Symmetrix Connect Support

Supported Clusters for EDM Backup Support

NAS/NDMP Backup and Restore Support

EDM Acronym Definitions

EDM Hardware Support Matrix

Supported Server OS and Platforms

The EDM 5.0.0 software requires Sun Microsystems Solaris 2.8 operating system and Solaris patches. EMC ships EDM with Solaris 2.8 and the Solaris patches already installed.

The EDM 5.0.0 software runs on the following hardware from Sun Microsystems:

- Enterprise 450
- Ultra Enterprise 3500
- Ultra Enterprise 4500
- Ultra Enterprise 6500
- Ultra Enterprise 10000
- Sun Fire V280 (Customer must supply additional disk space for catalogs)
- Sun Fire V480 (Customer must supply additional disk space for catalogs)
- Sun Fire V880
- Sun Fire 3800/4800/6800

The EDM software also supports the hardware for previous versions of EDM. The minimum memory requirement on the server is 2 GB.

EDM Network Backup Support

Supported Network Backup and Recovery Clients.

Vendor & Platform	Operating System	Backup Client Features: Filesystem Clients Database Clients	Remarks	
EMC Celerra File Server	NAS 2.2.35.4 2.2.25.6 2.2.15.4 3.0.15 3.0.21 4.0, 4.1, 4.2.10, 5.0.10, 5.1.15, 5.1.18		Beginning with 3.0.15, the EMC HighRoad (MPFS – Multiplex Filesystem) option is also available, allowing for support of both NFS– and MPFS–mounted filesystems. For Solaris platforms, all available HighRoad (MPFS) must be installed.

Microsoft Intel x86	Windows NT	4.0	Std, FB, LFS	SQL 7.0, SQL2000 Exchange 5.5 Oracle 7.3, 8.0.x, 8.1.x Lotus Notes cc:Mail SAP R/3 Backint	Filesystems & applications require EDMBackup for Windows NT v3.1.0 or higher
Microsoft Intel x86	Windows 2000		Std, FB, LFS	SQL7, SQL2000 Exchange 5.5, 2000 Oracle 8.1.x, 9.2.x Lotus Notes 5.0.x (above 5.0.4)	Filesystems & applications require EDMBackup for Windows 2000 v3.1.0 or higher. SQL2000 requires EDMBackup for Microsoft SQL Server v4.0 or higher. Exchange 2000 requires EDMBackup for Microsoft Exchange v3.1 or higher. Oracle 8.1.6 requires Oracle client v3.0.1. Lotus Notes requires Notes client 1.0.1 or higher.
Microsoft Intel x86	Windows XP		Std, FB, LFS		Filesystems & applications require EDMBackup for Windows XP v3.1.0 or higher
Microsoft Intel x86	Windows 2003		Std, FB, LFS	Oracle 9.2.x, SQL Server 2000, Exchange 2003	Filesystems & applications require EDMBackup for Windows 2003 v4.0.0 or higher
NCR System 3000	UNIX SVR4 MP-RAS	3.02	VxFS, FB, LNK		No port control support.
Novell Intel x86	NetWare	3.2, 4.2, 5.10, 6.0, 6.5	Std	None	NetWare Cluster Services supported with v3.0.2A.
Red Hat Intel x86	Linux	6.2	FB, LNK	None	Requires patch from Red Hat. For details, see the Red Hat Linux Install Requirements section of the EDM Release Notes. No raw partition support.
Red Hat Intel x86	Linux	7.0	FB, LNK	None	For patch information, contact EMC Customer Service. No raw partition support.
Red Hat Intel x86	Linux	7.1	FB, LFS, LNK	Oracle 8i	
Red Hat Intel x86	Linux	7.2	FB, LFS, LNK		
Red Hat Intel x86	Linux	7.3	FB, LFS, LNK	Oracle 8i	
Red Hat Intel x86	Linux	8.0	FB, LFS, LNK		
Red Hat Intel x86	Linux	9.0	FB, LFS, LNK		Requires at least EDM patch 500 10.
Red Hat Intel x86	Linux	AS 2.1	FB, LFS, LNK		Requires at least EDM patch 500 07.
Sequent NUMA-Q Intel x86	DYNIX/ptx	4.5.x, 4.6.x	ACL, FB, EFS, LFS, LNK	None	No port control support.
Sequent Symmetry Intel x86	DYNIX/ptx	4.4.x	ACL, FB, EFS, LFS, LNK	None	No port control support.
Siemens Pyramid Nile Series RM Series	DC/OSx	1.1	FB, LNK, VxFS	None	No port control support.
Siemens Pyramid Nile Series RM Series		5.4x	FB, LNK, VxFS	None	No port control support.
Silicon Graphics IP Series	IRIX	6.2	FB, LNK	None	
Silicon Graphics IP Series	IRIX	6.4	FB, LFS, LNK, XFS	None	IRIX 6.4 requires SGI patch SG0003577
Silicon Graphics IP Series	IRIX	6.5	FB, LFS, LNK, XFS	None	IRIX 6.5, v6.5.9 or higher is recommended.
Sun SPARC	Solaris	2.6	ACL, FB, LFS, LNK, VxFS	Oracle 8.0.x, 8.1.x, 9.0.1, 9.2.x Sybase 11.9.x, 12, 12.5 Informix 9.2x Backint 4.5, 4.6	
Sun SPARC	Solaris	7,8,9	ACL, FB, LFS, LNK, VxFS	Oracle 8.0.x, 8.1.x, 9.0.1, 9.2.x Sybase 11.9.x, 12, 12.5 Informix 9.1x, 9.2x, 9.3 Backint 4.5, 4.6, 4.7	
Sun Intel x86	Solaris	7, 8	ACL, FB, LFS, LNK, VxFS	None	

1. cc:Mail and Lotus Notes (except the native Domino R5 client) require St. Bernard Software's OFM.

EDM Symmetrix Path Support

This table lists platforms and database clients that EDM Symmetrix Path supports.

- Supported PowerPath versions 2.1.x, 3.0.x, 4.0.x (Solaris only without volume manager)

- Supported SymAPI versions 5.0.x, 5.1.x, 5.2.x, 5.3.x
- EDM 5.0 patch 6 and above contains Symm Socket Layer 1.7.x (this drops support for HP-UX 10.20).
- Minimum microcode level 64 (69 microcode supported on EDM 5.0 patch 6 and above, 70 microcode supported on EDM 5.0 patch 9 and above)

Supported EDM Symmetrix Path Backup Clients

Vendor & Platform	Operating System	Database Version	Remarks
Fujitsu PRIMEPOWER (Models GPF7000F and GPF7000S)	Solaris 2.6, 7, 8, 9	Oracle 8.0.x, 8.1.x, 9.0.1, 9.2.x	
HP 9000 All classes	HP-UX 10.20	Oracle 7.3, 8.0.x, 8.1.x, Backint 3.1 Sybase 11.9.x Informix 7.3x, 9.2x	HP-UX 10.20 is NOT supported for EDM 5.0 patch 500_06 or higher.
HP 9000 All classes	HP-UX 11.00	Oracle 7.3, 8.0.x, 8.1.x, 9.0.1, 9.2.x Informix 7.3x, 9.2x, 9.3.x (32-bit) Sybase 11.5, 11.9.x, 12.5 Backint 3.1, 4.5, 4.6, 4.7	
HP 9000 All classes	HP-UX 11i	Oracle 8.0.x, 8.1.x, 9.0.1, 9.2.x Informix 7.3x, 9.1x, 9.2x, 9.3 Sybase 11.9.x, 12, 12.5 Backint 4.5, 4.6, 4.7	
IBM RS/6000 SP2	AIX 4.3.x	Oracle 7.3, 8.0.x, 8.1.x, 9.0.1, 9.2 Backint 4.5, 4.6 Sybase 12.0, 12.5 Informix 7.3x, 9.2x, 9.3.x (32-bit)	Oracle 8.1.x is required for RS/6000 Proxy Symmetrix Connect support. 64-bit Oracle requires minimum EDM patch PE500_06.
IBM RS/6000 SP2	AIX 5.1	Oracle 7.3, 8.0.x, 8.1.x, 9.0.1, 9.2 Backint 4.6, 4.7 Sybase 12.0, 12.5 Informix	Oracle 8.1.x is required for RS/6000 Proxy Symmetrix Connect support. 64-bit Oracle requires minimum EDM patch PE500_06.
IBM RS/6000 SP2	AIX 5.2	Oracle 9.2 Backint 4.7	Requires a minimum of EDM patch PE500_11 or above
Microsoft Intel x86	Windows NT 4.0	SQL Server 7.0, 2000 Exchange 5.5 Oracle 7.3, 8.0.x, 8.1.x Lotus Notes cc:Mail SAP R/3 Backint	
Microsoft Intel x86	Windows 2000	Oracle 9.2.x SQL 7.0, SQL2000 Exchange 5.5, 2000 Lotus Notes 5.0.x	Windows 2000 support is for Professional and Advanced Server. Datacenter is supported for 32-bit filesystems only. Exchange 2000 requires Exchange client v3.0. Lotus Notes requires Domino 5.0.4 or higher and Notes client 1.0.1 or higher.
Microsoft Intel x86	Windows 2003	Oracle 9.2.x SQL Server 2000 Exchange 2003	Requires a minimum of EDM patch PE500_11 or above and NTFS client patch PFS400_02 or above
Novell Intel x86	NetWare 5.10, 6.0, 6.5		No SFTIII support. NetWare Cluster Services supported with v3.0.2A
Sun-4 (SPARC)	Solaris 2.6	Oracle 7.3, 8.0.x, 8.1.x, 9.0.1, 9.2.x (32-bit) Sybase 11.9.x Informix 7.3, 9.2, 9.3 (32-bit) Backint 3.1, 4.5	
Sun-4 (SPARC)	Solaris 7	Oracle 8.0.x, 8.1.x, 9.0.1, 9.2.x (32-bit) Sybase 11.9.x, 12 Informix 7.3, 9.2 Backint 3.1, 4.5, 4.6, 4.7	
Sun-4 (SPARC)	Solaris 8, 9	Oracle 8.0.x, 8.1.x, 9.0.1, 9.2.x Sybase 11.9.x, 12 Informix 9.2 Backint 4.5, 4.6, 4.7	
Sun Ultra III (SPARC)	Solaris 8	Oracle 8.0.x, 8.1.x, 9.0.1, 9.2.x Sybase 11.9.x Backint 4.5, 4.6, 4.7	

EDM Symmetrix Connect Support

This table lists the clients that Symmetrix Connect supports. See Acronyms Used for EDM for acronym definitions.

- Supported PowerPath versions 2.1.x, 3.0.x, 4.0.x (Solaris only without volume manager)
- Supported SymAPI versions 5.0.x, 5.1.x, 5.2.x, 5.3.x
- Minimum microcode level 64 (69 microcode supported on EDM 5.0 patch 6 and above, 70 microcode supported on EDM 5.0 patch 9 and above)

Supported EDM Symmetrix Connect Backup Clients

Vendor & Platform	Operating System	Logical Volume Manager	Filesystem Type ¹	Database Version	Remarks
Fujitsu PRIMEPOWER (Models GPF7000F and GPF7000S)	Solaris 2.6, 7, 8, 9	VxVM 3.x (up to 3.5)	UFS, VxFS	Oracle 8.0.x, 8.1.x, 9.0.1, 9.2.x	
HP 9000 All classes	HP-UX 10.20	HP-LVM	HFS, VxFS	Oracle 7.3.x, 8.0.x, 8i, Backint 3.1, 4.0	
HP 9000 All classes	HP-UX 11.00	HP-LVM	HFS, VxFS	Oracle 7.3.x, 8.0.x, 8.1.x, 9.0.1, 9.2.x Backint 3.1, 4.0, 4.5, 4.6, 4.7	
HP 9000 All classes	HP-UX 11i	HP-LVM	HFS, VxFS	Oracle 7.3.x, 8.0.x, 8.1.x, 9.0.1, 9.2.x Backint 3.1, 4.0, 4.5, 4.6, 4.7	
HP	Tru64 UNIX V4.0x	LSM	UFS, AdvFS	Oracle 7.3, 8.0.x, 8.1.x, 9.0.1, 9.2.x (32-bit)	AdvFS restricted to one fileset/domain

IBM RS/6000	AIX 4.3.x	IBM-LVM	JFS	Oracle 7.3.x, 8.0.x, 8.1.x, 9.0.1, 9.2.0 Backint 3.1, 4.0, 4.5, 4.6	Backup of individual files within compressed filesystems not supported.
IBM RS/6000	AIX 5.1, 5.2	IBM-LVM	JFS, JFS2	Oracle 9.2, Backint 4.7	
Microsoft Intel x86	Windows NT 4.0	NT Disk Administrator	NTFS	Oracle 7.3.x, 8.0.x, 8.1.x, 9.2.x Exchange 5.5 SQL Server 7.0, 2000	No support for RMAN Proxy Copy.
Microsoft Intel x86	Windows 2000	Logical Disk Manager	NTFS	SQL Server 7.0, 2000 Oracle 8.1.7, 9.2.x Exchange 5.5	No support for RMAN Proxy Copy.
Microsoft Intel x86	Windows 2003	Logical Disk Manager	NTFS	SQL Server 2000 Oracle 9.2.x	Symcli 5.2 or above needed for Emulex Storport driver support

Vendor & Platform	Operating System	Logical Volume Manager	Filesystem Type ¹	Database Version	Remarks
Sequent Symmetry or NUMA-Q Intel x86s	Dynix/ptx 4.4.x, 4.5.x, 4.6.x	Sequent Volume Manager (VERITAS)	UFS, EFS	Oracle 7.3.3 minimum, 8.0.x, 8.1.x	
Sun 4 (SPARC)	Solaris 2.6	VxVM 3.x (up to 3.5)	UFS, VxFS	Oracle 7.3.x, 8.0.x, 8.1.x, 9.0.1, 9.2.x Backint 3.1, 4.0, 4.5, 4.6	
Sun 4 (SPARC)	Solaris 7	VxVM 3.x (up to 3.5)	UFS, VxFS	Oracle 7.3.x, 8.0.x, 8.1.x, 9.0.1, 9.2.x Backint 3.1, 4.0, 4.5, 4.6, 4.7	
Sun 4 (SPARC)	Solaris 8, 9	VxVM 3.x (up to 3.5)	UFS, VxFS	Oracle 8.1.x, 9.0.1, 9.2.x Backint 4.5, 4.6, 4.7	
Sun Ultra III (SPARC)	Solaris 8	VxVM 3.x (up to 3.5)	UFS, VxFS	Oracle 8.1.x, 9.0.1, 9.2.x Backint 4.6, 4.7	

1. See EDM Acronym Definitions

Supported Clusters for EDM Backup

These Cluster products are supported for EDM 5.0 backup, provided the following conditions are met:

- The EMC Support Matrix must contain support for your particular platform, OS, HBA, and Powerpath version.
- This EDM 5.0 Support matrix must show support for your platform, OS, backup type and application.

Cluster Services

- Legato cluster
- IBM HACMP
- Veritas VCS
- SUN cluster server
- Microsoft MSCS
- Oracle (RAC) Real Application Cluster (Please contact EMC Customer Service for specific configuration information)
- HP Service Guard

NAS/NDMP Backup and Restore Support

- NFS mounted backups for Celerra (See Network backup table above for supported revs)
- Highroad(SAN) Backups for Celerra (3.0.15, 4.2.10, 5.0.10, 5.1.9.4, 5.1.15.3 minimum revs or greater)
- Local(SAN) NDMP Backups for Celerra (2.2.46.4, 4.2.10, 5.0.10, 5.1.9.4, 5.1.15.3 minimum revs or greater)
- Local(SAN) NDMP Backups for Clarion IP4700 (R2.0 p19.1 minimum)

Network Data Management Protocol Support (NDMP) Tape Library Unit Support

- Tape library and drive combination must be supported by EDM
- Drive must be supported by Celerra

EDM Acronym Definitions

This table describes acronyms and abbreviations that appear in the EDM matrix.

Acronyms Used for EDM

Acronym	Definition
ACL	Access Control List
ADV	Compaq/DEC Advanced Filesystem
EFS	Enhanced Filesystem
FB	EDM File Browser
FS	Filesystem
JFS	Journal Filesystem
JFS2	Enhanced Journal Filesystem
LFS	Large File Support(See Size Limits for Certain Clients for limits)
LNK	EDM Transfer Protocol, also called EDM-Link, a replacement for remote shell support (rsh)
NDMP	Network Data Management Protocol
RAW	Raw Filesystem
RPQ	Request for Price Quotation
STD	Standard-speed client
VxFS	VERITAS File System
VxVM	VERITAS Volume Manager
XFS	SGI Extended Filesystem

EDM Hardware Support Matrix

Supported Media for EMC Supplied Tape Library Units

For DLTape IV half-inch data cartridges we support the following vendors only:

- Fujifilm
- Maxell
- Quantum
- EMC

*DLT, DLTape, and the DLT logo are trademarks of Quantum Corporation.

For LTO tape we support the following vendors only:

- Fujifilm
- Maxell

Supported Tape Library/Drive Configurations

Contact your EDM sales representative for support of any devices not listed.

Definitions

Direct Attach SCSI: Refers to connecting SCSI tape drives directly to the EDM server. No bridges or switches in between the EDM and the TLU/Tape Drives.

Fibre Attach SCSI: Refers to connecting SCSI tape drives **through a bridge and a switch** to the EDM server. The connection path would be EDM to a Switch to a Bridge to the TLU/Tape Drives.

Direct Attach Fibre: Refers to connecting Fibre ready tape drives **through a Brocade switch** to the EDM.
 STK 9840 A: This is STK marketing making a reference to the first 9840 drives available. STK engineering does not use this number because the initial drives never had the "A" designation. It was created when they came out with revision "B" of the 9840 drives, and yes 9840B does exist.
 DTF-1: Sony's GY-2120 tape drive
 DTF-2: Sony's GY-8240 tape drive

Non-EMC Backup Software Solutions

This section lists all the Open Systems topologies and associated configurations and components that are currently supported.

- EMC only specifies backup related components and revisions for those configurations that have EMC unique content. For configurations where the backup server is not connected to an EMC storage system, the backup software supplier should be consulted for questions about supported backup server hardware and software components (e.g., tape libraries, backup servers, and operating systems supported).
- An RPQ is required for CLARiiON configurations with both VERITAS NetBackup and VERITAS Cluster Server. Per VERITAS, these configurations must be installed by VERITAS Professional Services.
- For supported tape libraries and drives, see the table Tape Libraries.

1.A dedicated tape drive is a tape drive within a library that is statically and permanently associated with one backup client. A shared tape drive is one that is dynamically and temporarily associated to a backup client.

2.Anchor switch is not supported. Hub (loop) configurations may not connect through a FC/SCSI bridge to a tape library.

Understanding Backup Software License Guidelines

With any backup application you must be aware of the licensing guidelines. For example, every vendor has standard support for a typical small tape library that consists of 1 drive and perhaps unlimited slots. If support for more than one tape drive is required, then another option (e.g., Tape Library Option) is required. Also, most client options include support for a set number of clients. Additional licenses must be purchased for additional installations.

The following chart provides a general overview of the options and agents that are available from the major backup application vendors. Please use it as a guideline for understanding customer solutions. Most vendors have all or a subset of these features but may use different names or terminology.

Backup Application License Guidelines

Main Component	Description	Questions to Ask
Basic Server Edition	Single Server Support	How many tape drives are supported?
Advanced Server	Multiple Server Support	Usually includes support for one drive and unlimited slots.
Enhanced Options & Agents		
Tape Library Option	Advanced library features	In most cases provides unlimited tape device support.
Cross-Platform Management	Heterogeneous platform support	What platforms does it support?
Clustering		
Open File Agent	Backup of files in use	
Disaster Recovery		What type of DR?
Client Agents		
NT/2000, NetWare, UNIX, Linux, OS/2, Windows 3.x, 9X, etc.	This option is usually sold on a per client basis or on a given limit such as 5 or 25 clients per package.	How many clients does your customer have?
Storage Area Network		
SAN Option	Support for Fibre Channel configurations. Allows multiple servers to share tape devices.	
Serverless Backup	Backup directly to a library avoiding server resources	
Database Protection		
Exchange, SQL, Oracle, Sybase, Informix, Lotus, etc	Database protection with various levels of support while online	License for how many databases?
High Speed Performance		
Image Option	Block level image of data rather than file by file including file-level restores	
Tape RAID	Provides striping across multiple tape devices	Improves performance and protection.
Archival Support		
Optical Library Option		

Backup Topologies

Local, LAN-Based, and Private LAN Topologies

Backup Vendor/Product	Backup Server or Client with Attached CLARiiON Storage Systems	Backup Server or Client with No Attached CLARiiON Storage Systems	Backup Components
EMC Data Manager (EDM)	Must confirm to restrictions in the other sections of this document.	No restrictions	Consult EDM support matrix.
Other vendors	Must confirm to restrictions in the other sections of this document.	No restrictions	Consult vendor's support matrix.

1.Currently, EDM backup servers are not configured with CLARiiON storage systems.

Configuration Rules

Use the following rules when configuring local, LAN-based and private LAN topologies and SAN-connected servers that are backed up by a local, LAN-based or private LAN topology (that is, topologies where the backup data does not flow over the SAN):

- Any backup server or client server that connects to EMC storage systems must adhere to the requirements in the other sections of this document.
- EMC places no restrictions on any backup server or client server that is not connected to EMC storage systems.
- Consult the backup software supplier's support matrix for component compatibility (server platform, operating systems, HBAs, tape driver, and tape libraries).

SAN with Dedicated Tape Drives

For information about supported tape libraries, tape drives, and Fibre Channel-to-SCSI bridges, see the table Tape to ESN Connectivity Information.

1. See CLARiiON Open Systems Support Matrix tables for supported servers.
2. For CLARiiON environments, see the table Tape to ESN Connectivity Information. This requirement does not apply to SBus systems using the Emulex LP9002S-F2 HBA.
3. Sharing a tape library between Window NT4 and Windows 2000 platforms running Backup Exec 8.6 and NetWare systems running Backup Exec for NetWare 9.0 is not supported.
4. Customers must run the OmniBack II 4.1 Device Test Tool (DTT) as a check to determine whether or not their FC/SAN environment is supported by OmniBack II 4.1. This tool is available on the HP Web site.
5. Server Free backup is not supported.
6. Windows 2000 using Emulex HBAs use driver 2.11a2 instead of 2.13a4.
7. Exceptions include: BakBone NetVault, Syncsort Backup Express, and Tivoli Manager.
8. Supported only as backup client. Only V-Class, N-Class, and L-Class models supported.
9. Supported only as backup client. SP series systems are not supported.
10. A dedicated HBA running the IBM native driver is required for Tivoli to communicate with tape drives and tape library autochangers.
11. Supported only with QLogic StorPort drivers.
12. Supported only with the Dell PV-132T and PV-136T tape libraries and SDLT 320, LTO-1 and LTO-2 SCSI tape drives
13. Supported with QLogic and Emulex SCSIport drivers.
14. **Supported on NetWorker 7.1 only.**

SAN and LAN with Dedicated Tape Drives

IBM ⁹	AIX 4.3.3, 5.2	LEGATO NetWorker 6.0.2 with hotfix LGTpa30494, 6.1 with hotfix LGTpa31689, 6.1.1, 6.1.3, 7.0 VERITAS NetBackup Data Center, Rev 3.4, with Cumulative Patch J0850482 Tivoli Storage Manager 4.2.1
Linux	Red Hat Linux 7.3, 8.0, 9.0¹⁴ , Advanced Server 2.1	LEGATO NetWorker 6.1.3, 7.0, 7.1
Linux	Red Hat Linux Advanced Server 2.1	VERITAS NetBackup Data Center 4.5

1. See CLARiON Open Systems Support Matrix tables for supported servers.
2. For CLARiON environments, see the table Tape to ESN Connectivity Information. This requirement does not apply to SBus systems using the Emulex LP9002S-F2 HBA.
3. Sharing a tape Library between Window NT4 and Windows 2000 platforms running Backup Exec 8.6 and NetWare systems running Backup Exec for NetWare 9.0 is not supported.
4. Customers must run the OmniBack II 4.1 Device Test Tool (DTT) as a check to determine whether or not their FC/SAN environment is supported by OmniBack II 4.1. This tool is available on the HP Web site.
5. Server Free backup is not supported.
6. Windows 2000 using Emulex HBAs use driver 2.11a2 instead of 2.13a4.
7. Exceptions include: BakBone NetVault, Syncsort Backup Express, and Tivoli Manager.
8. Supported only as backup client. Only V-Class, N-Class, and L-Class models supported.
9. Supported only as backup client. SP series systems are not supported.
10. A dedicated HBA running the IBM native driver is required for Tivoli to communicate with tape drives and tape library autochangers.
11. Supported only with QLogic StorPort drivers.
12. Supported only with the Dell PV-132T and PV-136T tape libraries and SDLT 320, LTO-1 and LTO-2 SCSI tape drives
13. Supported with QLogic and Emulex SCSIport drivers.
14. **Supported on NetWorker 7.1 only.**

SAN and Private LAN with Dedicated Tape Drives

EMC GeoSpan for VERITAS Cluster Server: Refer to the Symmetrix Geographically Dispersed Cluster Table

- 1.VxTF is not supported in clustered environments.
- 2.Except Symmetrix 3700/5700.
- 3.Supported only with WideSky 5.1.
- 4.C-bit must be enabled for VxVM.
- 5.Requires Sun recommended patch cluster with minimum kernel patch 108528_20.
- 6.Refer to EFS/EDE 4.0 Release Notes for complete patch requirements.
- 7.If running VERITAS version of VxVM/VxFS, VERITAS FS3.5 FP1 is required.

VERITAS Volume Manager (VxVM)¹

Product Name	Included Product	Supported OS	Status/Release Planned	DMP	PowerPath	Model	Minimum Microcode	Highest Microcode Qualified	Comments
Sun Solaris									
VxVM 3.0 ^q SUNW only release	VMSA 3.0	Solaris 2.6, 7	Qualified	Y ³	1.3 (pseudo) 1.5	Symmetrix 3000/5000 series	5x65	5x65	Released only by SUN.
VxVM ₂ 3.0.1n	VMSA 3.0	Solaris 2.6, 7	Qualified	Y ³	1.3 (pseudo) 1.5	Symmetrix 3000/5000 series	5x65	5x65

- Manual manipulation of Veritas disk group IDs is required to mount BCVs.
 - When working with DMP and PowerPath the following should be done:
 - When working with Native device names (c##d##) DMP should be enabled.
 - When working with pseudo (emcpower) device names, DMP can be disabled.
 - When working with Sun Cluster / DR DMP must be disabled.
 - DMP may not be disabled with VxVM 3.1.1 and higher. When VxVM 3.1.1 and higher is installed, DMP will be automatically re-enabled.
 - There is a new DMP driver that should be installed after the VxVM install. This driver (needs Microcode patch 9321 available for Microcode 5265-47 and up), solves the problem that DMP hangs if the device is in NR state.
 - If DMP is enabled, minimum microcode is 5568.45.17.
 - FC4700, CX600, CX400 only.
 - When neither ATF or PowerPath are present, VERITAS DMP as part of Volume Manager 3.2 can be used to manage CLARiiON arrays only if the CLR-ASL is installed.
 - CLARiiON attach requires PowerPath 3.0.4 or higher.
 - Native names only.
 - VxVM DMP support is not compatible with PowerPath. PowerPath overrides DMP functionality.
 - DMP functionality requires setting the C-bit on the Symmetrix directors.
 - Detailed information:
- | Application Build | HBA | MSCS Support | Notes |
|-------------------|---------------|--------------|---|
| 5.25.66 | Emulex LP8000 | Yes | Requires Driver 2.11a2 |
| 5.25.78 | Emulex LP8000 | Yes | MSCS w/VxVM 2.5 Dynamic Link support. HBA requires Driver 2.11a2, 5567.23.12s microcode |
| 5.25.78 | QLogic 2200 | | |
- Hot relocation must be disabled.
 - VxVM 3.0 with Symmetrix or CLARiiON requires VxVM 3.0 SP1 with Hot Fixes 03 **and** 04.
 - VxVM 3.0 with PowerPath requires minimum PowerPath 3.0.
 - Admsnap does not support the option of specifying the VxVM objects for start and stop operations. The Admsnap script must specify the LUNs that make up the volume using individual Admsnap commands.
 - VxVM Service Pack 1 required for use with EMC PowerPath. Contact Customer Service for information on registry changes necessary for PowerPath/VxVM 3.0 compatibility.
 - Dynamic disks are not supported as Quorum disks with GeoSpan clusters (Quorum disk must be a basic disk).
 - DMP not supported.
 - VxVM is not supported on CLARiiON with servers booting from the array.
 - Requires Update 2.
 - VxVM is not supported on Symmetrix with servers booting from the array.
 - VxVM DMP and PowerPath may not be used on the same host.
 - The Admsnap utility is not supported in a Linux DMP environment.
 - AIX 5.2 requires VxVM 3.2.2.0 patch for AIX.
 - 32 bit or 64 bit.
 - The package patch-2.5.4-10.i386.rpm is required and is available on Red Hat 2.1 Advanced Server CD #2.
 - Refer to Veritas technote #255172 for the required CLARiiON ASL installation to enable DMP support on the CLARiiON.
 - Refer to Veritas technote #243712 for instructions on the Foundation Suite installation.
 - Except Symmetrix 3700/5700.
 - PowerPath requires the powervxvm script, which can be obtained from the EMC Powerlink website.
 - Veritas Disk Groups cannot be shared across more than one AIX node when using hdiskspace devices.
 - In a shared disk environment, VxVM cannot configure hdiskspace devices to more than one AIX node simultaneously.
 - Requires VxVM 3.2.2.0 patch for AIX.
 - VxVM 3.1 with Symmetrix or CLARiiON requires VxVM 3.1 SP1.**
 - Veritas VxVM 3.1 DMP functionality is supported for CLARiiON with a Veritas-published CLARiiON Support Patch, which is part of the Veritas Volume Manager 3.1 Service Pack 1.**

VERITAS File System (VxFS)

Product Name	Supported OS	Status/Release Planned	PowerPath	Storage Model(s)	Comments
Sun Solaris					
VxFS 3.2.5	Solaris 2.6	Qualified	Refer to VxVM information, or else contact EMC Customer Service.	Symmetrix 3000/5000 series	
VxFS 3.2.6	Solaris 2.6	Qualified	Refer to VxVM information, or else contact EMC Customer Service.	Symmetrix 3000/5000 series	
VxFS 3.3	Solaris 2.6	Qualified	Refer to VxVM information, or else contact EMC Customer Service.	Symmetrix 3000/5000 series	
VxFS 3.3.1	Solaris 2.6	Qualified	Refer to VxVM information, or else contact EMC Customer Service.	Symmetrix 3000/5000 series	
VxFS 3.3.2	Solaris 2.6, 7	Qualified	Refer to VxVM information, or else contact EMC Customer Service.	Symmetrix 3000/5000 series	The following VxFS 3.3.2 patches are recommended: 108474-01 (Solaris 2.6) 108475-01 (Solaris 2.7)
VxFS 3.3.3	Solaris 2.6, 7, 8	Qualified	Refer to VxVM information, or else contact EMC Customer Service.	Symmetrix 3000/5000 series	
VxFS 3.4	Solaris 2.6, 7, 8	Qualified	Refer to VxVM information, or else contact EMC Customer Service.	Symmetrix 3000/5000 series*, 8000 series, DMX series CLARiiON FC4700, CX600, CX400	
VxFS 3.4	Solaris 9	Qualified	Refer to VxVM information, or else contact EMC Customer Service.	Symmetrix 3000/5000 series*, 8000 series, DMX series CLARiiON FC4700, CX600, CX400	
VxFS 3.5	Solaris 2.6, 7, 8, 9	Qualified	Refer to VxVM information, or else contact EMC Customer Service.	Symmetrix 3000/5000 series*, 8000 series, DMX series CLARiiON FC4700, CX600, CX400	
HP-UX					
HP JFS 3.0 and HP Online JFS 3.0	HP-UX 10.20	Supported	2.0, 2.0.1, 2.0.2, 2.1, 2.1.2, 2.1.3, 3.0, 3.0.1	Symmetrix 3000/5000 series*, 8000 series	VxFS File System Type 3
HP JFS 3.1 and HP Online JFS 3.1	HP-UX 11.0	Supported	2.0, 2.0.1, 2.0.2, 2.1, 2.1.2, 2.1.3, 3.0, 3.0.1	Symmetrix 3000/5000 series*, 8000 series	VxFS File System Type 3
HP JFS 3.3 and HP Online JFS 3.3	HP-UX 11i v1.0 (HP-UX 11.11)	Supported	2.0.2, 2.1, 2.1.2, 2.1.3, 3.0, 3.0.1	Symmetrix 3000/5000 series*, 8000 series	VxFS File System Type 4. HP JFS 3.3 and HP Online JFS 3.3 is equivalent to VERITAS VxFS 3.3.
VxFS 3.3	HP-UX 11i v1.0 (HP-UX 11.11)	Supported	2.0.2, 2.1, 2.1.2, 2.1.3, 3.0, 3.0.1	Symmetrix 3000/5000 series*, 8000 series	VxFS File System Type 4. HP JFS 3.3 and HP Online JFS 3.3 is equivalent to VERITAS VxFS 3.3.
VxFS 3.5	HP-UX 11i v1.0 (HP-UX 11.11)	Supported	3.0.2	Symmetrix 8000 series, DMX series	HP-UX 11i 64 bit only, Sep 2002 or later. The full VxFS 3.3 product, B3929CA, must be present on the system to upgrade to VxFS 3.5.
AIX					
VxFS 3.4.4.0	AIX 5.1, 5.2	Qualified	3.0.4	Symmetrix 8000 series, DMX series CLARiiON CX600, CX400	
Linux					
VxFS 3.4 Update 1 ²	Red Hat v2.1 Advanced Server v2.4.9-E3	Qualified	N/A	Symmetrix 8000 series CLARiiON FC4700, CX600, CX400, CX200	VxFS is part of the VERITAS Foundation Suite 2.0
VxFS 3.4 Update 1	Red Hat v2.1 Advanced Server upgraded to v2.4.9-E12	Qualified	N/A	Symmetrix 8000 series, DMX series CLARiiON FC4700, CX600, CX400, CX200	VxFS is part of the VERITAS Foundation Suite 2.0

1. The package patch-2.5.4-10.i386.rpm is required and is available on Red Hat 2.1 Advanced Server CD #2.
 2. Refer to Veritas technote #243712 for instructions on the Foundation Suite installation.
 3. Except Symmetrix 3700/5700.

VERITAS Cluster Server (VCS)

See the Clustered Host Tables for VCS support.
